
Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing DRAFT Environmental Assessment

Submitted By: Memphis Shelby County Airport Authority

Prepared By: AKRF, Inc. and Partners

September 2022

This Environmental Assessment becomes a Federal document when evaluated, signed, and dated by the Responsible FAA/SBGP Official.

Stephanie Saloom, Tennessee Department
of Transportation

1 PURPOSE AND NEED

The Memphis Shelby County Airport Authority (MSCAA) owns and operates Charles W. Baker Airport in Shelby County, Tennessee. The purpose of the proposed project is to remove tree obstructions from 14 Code of Federal Regulations (CFR) Part 77 (20:1) approach and other surfaces of the north end of Runway 18/36 at 2M8, to ensure the safety of air traffic approaching and taking off from the airport.

MSCAA is preparing an Environmental Assessment (EA) in accordance with the National Environmental Policy Act (NEPA) to document the potential social, economic, and environmental consequences of the proposed project. This project will be funded by the Tennessee Department of Transportation (TDOT) through two grants, and TDOT requires the completion of this EA pursuant to NEPA, as per the agency's guidance.¹ This chapter describes the purpose and need for the proposed project, and the required approvals for its implementation.

1.1 Introduction

MSCAA is an airport authority that owns and operates Memphis International Airport (MEM) and two general aviation airports in Tennessee, Charles W. Baker Airport (2M8) in Millington and General DeWitt Spain Airport in Memphis. Charles W. Baker Airport is approximately 10 miles northeast of downtown Memphis, Tennessee (**Figure 1**). The MSCAA is self-funded authority and does not receive local tax revenue.² MSCAA can and does apply for federal and state monies to assist in funding improvements to its three airports.

Charles W. Baker Airport (Airport or 2M8) is a general aviation airport that provides fuel service, hangar and ramp space and leasing opportunities, aircraft parking, and pilot and passenger services. The airport does not have any scheduled, commercial service. It consists of Runway 18/36, which is 3,500 feet in length, an associated taxiway, and is oriented in a north-south configuration. Activity levels at the airport are recorded by Airport staff. In 2021, operations were recorded as approximately 33,430.

1.2 Project Setting and Proposed Activities

The Airport is in Millington, Tennessee, which is a suburban area of the Memphis metropolitan area. Fite Road runs along the southern border of the Airport and Raleigh Millington Road is the major roadway to the east of the Airport. The entrance road to the Airport is from Fite Road. North of the airport is vegetated, undeveloped property, and to the west of the property is the Memphis International Raceway (**Figure 2**). The airport consists of one runway and associated taxiway, a terminal and office building, hangars, airport parking, fuel service, and surface parking for vehicles. Access to the airside area is through two restricted access gates.

The property north of Runway 18/36 is outside of the airport's property boundary and is comprised of vegetated and cleared, undeveloped land. There are wetlands and upland forest in this area, but with no habitat of concern. Some of the vegetated areas have trees that are tall enough to interfere with several imaginary surfaces, including the Part 77 (20:1) and transitional surfaces for Runway 18 (north end of

¹ Tennessee Department of Transportation, Aeronautics Division, *Environmental Standard Operating Procedure*, January 2020.

² Memphis-Shelby County Airport Authority. <https://flymemphis.com/leadership/>; <https://flymemphis.com/charleswbakerairport/>. Accessed January 19, 2022.

Runway 18/36). These trees are defined as obstructions and can alter the way aircraft use that runway. Approximately 100 acres in this area include obstructions, which has been identified as the project area. The project area consists of property from six privately-owned parcels (with three different landowners).

Proposed activities (the Project) include acquiring the land on which these trees are located and then removing the tree obstructions to the approach surfaces within the alignment of Runway 18. These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. During that inspection, it was determined that these tree obstructions are causing federal and state approach surface violations.

MSCAA proposes to acquire the areas of land that contain the current tree obstructions and those trees that were identified to be future obstructions in the same area. Once the property is acquired, MSCAA would remove and/or selectively top trees from upland and wetland areas within the project area (**Figure 2**) in three phases. The tree removal and tree topping activities would occur within approximately 81 acres of the site, consisting of uplands and wetland areas (**Figure 3**).

The Project would occur over approximately one year, with the majority of the work to occur in 2023, and in three distinct areas, described by phase (**Figure 4**):

- Phase I - MSCAA would acquire the land delineated as the project area, which is approximately 100 acres in size. Within the Phase I portion of the project area, approximately 20 acres of the upland areas would be cleared, graded, and stabilized. This includes removing trees, stumps and roots, and debris (shrubs, bushes, etc.) identified as obstructions. Tree removal activities, and subsequent grading activities, would be conducted incrementally, in sections in accordance with Tennessee Department of Environment and Conservation (TDEC) construction stormwater permitting requirements. Fallen trees would be proposed for reuse as harvested timber. If some trees could not be used for timber, those would be burned on-site using Air Curtain Destructor (ACD) burn processes and several burn pits. Burn waste would remain as on-site fill at the location of the ACD, in consideration of Shelby County Health Department regulations regarding smoke and particulate matter.
- Phase II - Within the Phase II portion of the project area, approximately 20 acres of wetland area and 13 acres of upland designated as buffer zones (the area of a 30-foot buffer around those wetlands and 60-foot buffer area around the streams in the Phase II area), tree cutting (to the stump) and topping would be selective and no clear cutting would occur.

Air Curtain Destructor (ACD) burn processes with pit.
<https://boothelrentals.com/air-curtain>. Accessed
February 21, 2022.

This work would be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

Within the 60-foot buffer zone around the streams, as well as where streams and wetlands overlap, trees would only be topped to comply with Federal Aviation Administration (FAA) glide slope regulations. The topping would be completed by hand using chain saws. The tree topping height would vary based on elevation and distance from runway end. Tree canopies would be maintained to the greatest extent possible to maintain the natural temperature and biology of the stream, as required by TDEC. Trees that fall into streams or that fall outside the buffer zone would be removed for offsite transport or using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

- Phase III – Only upland and stream buffer areas are present in the Phase III portion of the project (no wetlands occur in Phase III). The tree cutting in Phase III would occur after the first two phases. Approximately 25 acres of upland and 3 acres of stream buffer zones would be cut in the same methods as previously described in Phases I and II.

Tree removal activities would require temporary staging within the project area and would be determined when the site work began. These areas would be in upland portions of the project area and would not contribute any additional impact to wetlands or water resources. Multiple haul roads would be developed to minimize the crossing of streams on-site, with one primary road from the west via the Airport’s property and one from the east via S. Amherst Road. There is an unpaved road used for utility maintenance from S. Amherst Road that would be used to access the site. Any new haul roads required would be constructed in the uplands and only as necessary for access; some grading would occur as necessary. No disturbance related to haul road construction would be outside of the project area. After tree removal activities, the roads would be left in place.

Table 1-1 summarizes the acreage of cutting by phase and method.

Table 1-1
Proposed Activities, by Acreage and Phase

	Clear Cut (Upland Area)	Selective Cut (Wetlands and Buffer)
Phase I & Phase II	20 acres upland	20 acres wetland 13 acres of buffer
Phase III	25 acres upland	3 acres buffer
Total	45 acres	36 acres

1.3 Project Purpose and Need

The Project would clear obstructions from the 14 CFR Part 77 (20:1) approach surface, State licensing approach surface, FAA AC 150/5300-13B Surface 4 for visibility minimums greater than or equal to the ¾-mile, 14 CFR Part 77 transitional surfaces up to the building restriction line, and TERPS³ Visual Area 20:1 Surface, to meet TDOT and FAA requirements.

³ The standards that apply to instrument procedures are commonly referred to as TERPS, which stands for the U.S. Standard for Terminal Instrument Procedures.

The purpose of the Project is to acquire approximately 100 acres of land and to remove existing and impending tree obstructions from approximately 81 acres of that area, in the footprint several surfaces, including the 14 CFR Part 77 (20:1) surface and other State and FAA surfaces of Runway 18/36 at Charles W. Baker Airport (2M8). Specifically, acquisition of the land enables the Memphis Shelby County Airport Authority (MSCAA) to protect current terminal airspace and prevent the establishment or development of future airport hazards.

These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. The Airport is now operating under a conditional license until the obstructions are mitigated.

The Project would clear obstructions from the Part 77 (20:1) surface, State licensing approach surface, FAA Advisory Circular (AC) 150/5300-13B Surface 4 for visibility minimums greater than or equal to the ¾-mile, and Part 77 transitional surfaces up to the building restriction line, and TERPS Visual Area 20:1 Surface. It would also acquire the land necessary for control of the future Part 77 approach surface for the Runway 18 end, ensuring that MSCAA can prevent future penetrations to Part 77 surfaces. Acquiring the property eliminates the permitting needs associated with accessing land owned by others, allowing for more routine management and removal of potential obstructions. The need for the proposed action is to increase the safety of operations at 2M8 and ensure that MSCAA meets its obligations with its State Block Grant Program assurances.

1.4 Required Approval

These actions would be conducted in accordance with FAA's AC 150/5300-13B, *Airport Design*, to comply with 49 U.S.C. 47107(a)(9) and in Grant Assurance 20 (Hazard Removal and Mitigation) of the State Block Grant Program assurances, as prescribed by AC 150/5100.21, *State Block Grant Program* and administered by TDOT's Aeronautics Division. The lead agency in preparing this document is TDOT, as the agency is funding the Project through Obstruction Clearing Grant 79-555-0774-19 and the Land Acquisition Grant 79-555-0180-20. Having reviewed the Project's Environmental Determination Checklist, TDOT determined that an EA be prepared with the appropriate agency coordination.

This EA was prepared in accordance with the NEPA; Council on Environmental Quality (CEQ) Regulations for Implementing the Procedural Provisions of NEPA (40 CFR Parts 1500-1508); FAA Order 1050.1F, *Environmental Impacts: Policies and Procedures* (FAA Order 1050.1F);⁴ FAA Order 5050.4B, *NEPA Implementing Instructions for Airport Actions* (FAA Order 5050.4B);⁵ and the associated FAA 1050.1F Desk Reference (FAA Order 1050.1F Desk Reference),⁶ as directed by TDOT.

2 PROJECT ALTERNATIVES

This chapter describes the alternatives identified by MSCAA to remove the identified obstructions and prevent the further hinderance to the previously detailed surfaces on the north end of Runway 18 (see **Chapter 1**). This chapter also outlines the criteria for evaluating these alternatives and the results of the evaluation. The alternatives presented include the consideration of Part 77 and other surfaces, land ownership, and the natural resources associated with tree removal activities.

2.1 Alternatives Considered

The following four alternatives were considered and represent variations on acquisition strategy and tree clearing methodology. In addition, a No Action Alternative was reviewed. In each case, the alternative was deemed either favorable or unfavorable when compared to other alternatives. **Figure 5** also provides details for Alternatives A through D.

2.1.1 No Action Alternative

Under the No Action Alternative, the MSCAA would not acquire property. MSCAA would not remove or selectively trim trees within the project area. The trees and wooded areas identified in the project area would continue to be airspace obstructions under *Federal Aviation Regulation (FAR) Section 77.23 – Standards for Determining Obstructions*. This alternative would not fulfill the purpose and need for the Project, as it would fail to achieve or improve compliance with FAA and TDOT requirements for existing and future operations at 2M8. However, MSCAA has further studied the No Action Alternative as required by NEPA.

For the purposes of this analysis, the alternatives considered the same areas encompassed in Phases I, II, and III, and refer to them to differentiate portions of the project area.

2.1.2 Alternative A – Preferred Alternative

Proposed activities as described in **Section 1.2** of this document, are to acquire the land on which the identified obstructions (trees) are located and then remove or trim the trees that are within the approach surfaces of Runway 18. Once the property is acquired, MSCAA would remove and/or selectively top trees from approximately 81 acres of upland and wetland areas within the project area as previously described as the Project (**Chapter 1**). Approximately 45 acres would be clear cut with stump removal and approximately 36 acres would be selectively cut or trimmed with hand-held equipment in either wetlands or buffer zones, for a total of approximately 81 acres. This alternative would fulfill the Project's purpose and need, result in continued control and access to the area within the alignment of the northern end of Runway 18, and would minimize wetland and vegetative impacts. Therefore, Alternative A was determined the Preferred Alternative.

2.1.3 Alternative B - Property Acquisition and Clear Cut

As an alternative, MSCAA considered clearing the obstruction area identified within the project area without consideration of wetlands or buffer zones. This alternative would propose the clear cutting and stump removal of trees within approximately 81 acres, which is the total area in which obstructions occur. This method would result in the full removal of the tree canopy and habitat within that area. Stump removal would also result in ground disturbance, affecting soil stability in those areas.

It was determined that this action would unnecessarily remove trees that are not airspace obstructions and result in the full habitat removal of approximately 81 acres. This could have a greater impact to the health of the flora and fauna that inhabit the project area than the removal of fewer tree and stumps. Due to the greater extent of adverse impacts to the natural environment compared to other alternatives, this alternative was not considered as preferred.

2.1.4 Alternative C - Tree Clearing and No Property Acquisition

The MSCAA also considered removing the trees that constitute obstructions, as described under the Preferred Alternative, without acquiring any property. Under Alternative C, the MSCAA would work with current landowners to acquire necessary permits (*i.e.*, easements or other agreements) and gain temporary access to the property for obstruction removal. Although there is no guarantee that landowners would cooperate, for evaluation purposes, it was assumed that this could occur over approximately 24 months, which would need to occur before the Project commenced.

In evaluating this alternative, the MSCAA determined that continued coordination with landowners would likely be required to manage the obstruction area and maintain compliance for the Part 77 surfaces, particularly the Runway 18 approach surface. Negotiating multiple agreements to manage obstructions as time passes could cause delay to the removal of future obstructions. In addition, landownership of these parcels could change in the future, which may require additional coordination efforts regarding the ongoing maintenance of obstructions in the project area. As a result, the MSCAA recognized this alternative would require more long-term agreement coordination efforts, and therefore associated costs, to maintain compliance with FAA and TDOT obstruction regulations. There is also uncertainty related to the continued cooperation of the current and future landowners. As a result, the MSCAA determined that an alternative that provides long-term access and control over the potential obstruction, such as ownership, was favorable and therefore this alternative was not considered as preferred.

2.1.5 Alternative D - Property Acquisition and Removal of Fallen Trees and Stumps from Wetlands and Stream Buffer Zones

Alternative D considered similar removal techniques for uplands, wetlands, and buffer zones, but the addition of removing fallen trees and stumps from the wetlands and stream buffer zones. Under this alternative, instead of clear cutting, wetlands and buffers would be selectively cut and trimmed with hand-held equipment but fallen trees and stumps would be removed from those zones. Materials pulled from wetlands and buffer zones would be treated as other cut trees in that they would either be harvested for timber or burned onsite. This method could add time and cost to the proposed activities, rather than if MSCAA left the fallen trees and stumps in place. In addition, the heavier equipment and vehicles required to remove fallen trees and uproot the stumps would create excess damage to the wetlands, adversely affecting wetland and stream habitat as well as the associated wildlife that use this area. Due to the greater extent of adverse impacts to the natural environment compared to other alternatives, this alternative was not considered as preferred.

2.2 Evaluation Criteria and Results

An alternatives screening process was established to determine whether the candidate alternatives would fulfill the Project's purpose and need, whether an alternative would result in the desired control/access to the properties that contain the obstructions, and the relative extent of vegetation clearing and potential wetland impacts (considered through several tree removal methods).

In order for the Part 77 surfaces to be cleared, tree trimming or removal must be completed, and MSCAA determined an alternative would be preferred if it would minimize impacts to the wetlands and water resources that could be affected by removal activities. The locations of the obstructions are in wooded and undeveloped areas of several privately-owned parcels north of the Airport. As part of the review of the Project, MSCAA also determined there is a benefit to having control over the parcels of land north and within the alignment of the runway in perpetuity, as the obstructions identified are trees, which will continue to grow and require management over time. Therefore, as part of this analysis, the MSCAA conducted an evaluation of potential tree removal methods as well as parcel control/ownership scenarios of the land within the alignment of the north end of the runway.

Using the Project's purpose and need along with these considerations, the MSCAA developed the following criteria with which to evaluate the alternatives:

1. The ability of the alternative to achieve compliance with FAA and TDOT obstruction requirements through obstruction management (through either tree removal, topping, or cutting).
2. Ability to allow for continued compliance with FAA and TDOT obstruction requirements. This includes MSCAA's ability to manage areas that would or could interfere with Part 77 and other surfaces, which could ultimately affect operations at the Airport. An alternative that allowed for MSCAA's control over the activities that occur within the project area, such as land acquisition and ownership, would be preferable, as well minimizing management requirements for MSCAA of easements, agreements, or ongoing landowner coordination efforts. MSCAA initially considered both full and partial acquisition of the properties to the north of Runway 18/36. Since partial acquisition (taking ownership of only the area within the alignment of the runway) is less expensive and can achieve the goals of the Project, full acquisition was not necessary and therefore not considered further.
3. The extent of vegetation and wetland impacts to obtain the necessary obstruction clearance, as this would impact the permitting and potential mitigation necessary to implement the Project. Limiting environmental impacts was considered more favorable when evaluating alternatives.

2.3 Summary

After considering multiple alternatives, the MSCAA determined that Alternative A resulted in the most favorable results with respect to meeting the evaluation criteria and was the Preferred Alternative. The Preferred Alternative was the only alternative that was deemed to provide favorable results for each of the evaluation criteria and would best achieve the Project's purpose and need for the continued compliance with FAA and TDOT obstruction requirements. While the No Action Alternative had the least impact to the natural environment, it was ultimately eliminated because it failed to ensure compliance with FAA and TDOT requirements and failed to allow for continued maintenance of the area for compliance.

As summarized in **Table 2-1**, the No-Action Alternative was not preferred as it does not meet the purpose and need for the Project, as obstructions would remain. Alternatives B, C, and D result in either unfavorable access and control of the property where obstructions have been identified, or more wetland and vegetation impacts than other alternatives considered. Therefore, Alternative A is the only alternative that would fulfill all criteria in support of the Project's purpose and need and was selected as the Preferred Alternative for further consideration.

Table 2-1
Alternative Evaluation and Results

Evaluation Criteria	No Action	Alternative A - Preferred Alternative	Alternative B - Acquisition & Clear Cut	Alternative C - No Acquisition / Multiple Cut Methods	Alternative D - Acquisition & Tree and Stump Removal
Achieve Compliance with FAA/TDOT Requirements	No - No tree clearing or trimming, which would not comply with requirements	Yes – obstructions would be removed	Yes – obstructions would be removed	Yes – obstructions would be removed	Yes – obstructions would be removed
Control/Access to project area for continue maintenance; minimal MSCAA management effort	No - would not fulfill purpose and need for accessing or managing property	Yes – ownership would not require ongoing coordination with landowners or development of easement documents or negotiations	Yes – ownership would not require ongoing coordination with landowners or development of easement documents or negotiations	No – use of easements & continued coordination with landowners is more onerous than MSCAA acquisition of the properties	Yes – ownership would not require ongoing coordination with landowners or development of easement documents or negotiations
Acceptable Impacts to wetlands/ permitting	N/A – no cutting would occur	Yes - - 45 acres clear cut - 36 acres to selectively cut/trim	No - - 81 acres clear cut - clear cutting in wetland and stream areas would result in greater impacts to resources	Yes - - 45 acres clear cut - 36 acres to selectively cut/trim	No – - 45 acres clear cut - 36 acres to selectively cut/trim - Removing fallen trees and stumps from 16 acres of buffer, resulting in greater impacts to resources
Alternative Considered Further in the EA Analysis	No	Yes	No	No	No

2.4 Alternatives Considered in this EA

Alternative A is the only alternative that would fulfill all criteria in support of the Project’s purpose and need and was selected as the Preferred Alternative for further consideration. No Action Alternative was retained for detailed evaluation in the EA for comparative purposes pursuant to relevant FAA and TDOT NEPA guidance.

Therefore, this EA considers a No Action Alternative and the Preferred Alternative (Alternative A) that would implement proposed activities as described in **Chapter 1**.

3 AFFECTED ENVIRONMENT AND ENVIRONMENTAL CONSEQUENCES

This chapter identifies the natural and human environment within the Project's study area (the "Affected Environment") as well as the anticipated environmental effects from the implementation of the evaluated Preferred Alternative ("Environmental Consequences"). FAA Order 1050.1F and its associated Desk Reference states the affected environment section of the EA should document existing environmental conditions of the Project's study area, which is the potentially affected geographic area(s) where proposed activities would occur. The environmental consequences analysis should include consideration of the direct and indirect effects of the build alternative(s) as well as the significance of these effects.

Due to the nature of proposed activities, many potential effects occur during construction, which would be temporary in duration. Permanent effects and conditions are discussed for the relevant resources.

3.1 Study Area

Study areas are the locations that may be affected by a project's direct impacts or the consequences of the implementation of those actions (indirect impacts). The study area for a project can vary by resource. For this project, the project area is undeveloped land located north of the airport's property, where most resource categories would be applicable and where direct impacts would occur. For several resource categories, the study area goes beyond the boundary of the project area, and those are described in the applicable resource sections of this chapter.

3.2 Resource Categories Not Applicable

3.2.1 Coastal Resources

Coastal resources include coastal barriers and coastal zones. Applicable regulations that address these coastal resources are detailed in FAA Order 1050.1F and its associated Desk Reference. Coastal barriers and zones are not located within the project area and therefore would not be impacted by this project.

3.2.2 Natural Resources and Energy Supply

Energy supply within the vicinity of the project area include suppliers of Memphis-Shelby County public utilities such as power plants, water suppliers, sanitary and sewage disposal utilities, and natural gas and petroleum suppliers. The proposed activities of removing trees from the project area would not place any additional demand on local public utilities or the energy supply in the vicinity of the project area and therefore was not considered further. It would also not substantially diminish the natural resources in the area as there are multiple forested areas in the Project's vicinity and would not have an impact.

3.2.3 Wild and Scenic Rivers

Based on a review of the National Park Service, Nationwide Rivers Inventory, there are no wild or scenic rivers in the project area and, therefore, would not be impacted by this project.

3.3 Resources Present

The following resources are present in the project area or could be affected by implementation of the Preferred Alternative. The analysis identifies the potential effects of the Preferred Alternative based on changes in the resource that would occur with implementation of the Project and would not occur with the No Action Alternative. Construction impacts are discussed within each resource category. The primary statutes, regulations, executive orders, and other guidance related to the evaluation of the resources present in the study area(s) for the Project are detailed as part of FAA Order 1050.1F and its associated Desk Reference.

3.3.1 Air Quality

3.3.1.1 Affected Environment

The potential effects regarding air quality are evaluated against the National Ambient Air Quality Standards (NAAQS), as promulgated by the U.S. Environmental Protection Agency (EPA) under the Federal Clean Air Act (CAA).

The EPA currently regulates six criteria pollutants: ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), particulate matter (PM), and lead (Pb). Particulate matter is divided into two particle size categories: coarse particles with a diameter less than 10 micrometers (PM₁₀) and fine particles with a diameter of less than 2.5 micrometers (PM_{2.5}). The NAAQS are expressed in terms of pollutant concentration measured (or averaged) over a defined period of time and are two-tiered. The first tier (the “primary standard”) is intended to protect public health; the second tier (the “secondary standard”) is intended to protect public welfare and prevent further degradation of the environment.

Table 3-1 shows the primary and secondary NAAQS for the criteria pollutants. These standards apply to the concentration of a pollutant in outdoor ambient air. If the air quality in a geographic area is equal to or better than the national standard, the EPA will typically designate the region as an “attainment area.” An area where air quality does not meet the national standard is typically designated by the EPA as a “non-attainment area.” Once the air quality in a non-attainment area improves to the point where it meets the standards and the additional requirements outlined in the CAA, the EPA can re-designate the area to attainment upon approval of a Maintenance Plan, and these areas are then referred to as “maintenance areas.” Each state is required to prepare a State Implementation Plan (SIP) that outlines measures that regions within the state will implement to attain the applicable air quality standard in non-attainment areas for applicable criteria air pollutant, and to maintain compliance with the applicable air quality standard in maintenance areas. The status and severity of pollutant concentrations in a particular area will impact the types of measures a state must take to reach attainment with the NAAQS. The EPA must review and approve each state’s SIP to ensure the proposed measures are sufficient to either attain or maintain compliance with the NAAQS within a set period of time.

The Clean Air Act Amendments of 1990 require states to make recommendations to the EPA regarding the attainment status of all areas within their borders when the EPA finalizes an update to any NAAQS. Under that authority, the EPA further classifies non-attainment areas for some pollutants – such as ozone – based on the severity of the NAAQS violation as marginal, moderate, serious, severe, and extreme. To further improve the nation’s air quality, the EPA lowered the ozone standard in 2015 to 0.070 parts per million (ppm).

Shelby County, which encompasses the project area, is designated as in attainment for all criteria pollutants except the 2008 ozone, carbon monoxide, and 1997 lead standards, which are designated as maintenance

areas. Since the area is designated as maintenance for these pollutants, the General Conformity Rule applies. In addition, the Ambient Air Monitoring Branch of the Shelby County Health Department monitors air quality for Shelby County and reports data for the EPA under its Air Data website.⁷ A review of 2021 monitoring data shows that monitored values were below the NAAQS for all pollutants except 8-hour ozone, which showed four days where measured ozone was above the 0.070 ppm 2015 standard at the Shelby Farms monitor location (located east of Memphis) and one day where measured ozone was above the standard at the Mudville Road monitor (located in Millington).

Table 3-1
National Ambient Air Quality Standards

Pollutant	Averaging Time	Primary Standards	Secondary Standards
CO	Eight-hour	9 parts per million (ppm)	None
	One-hour	35 ppm	
Pb	Rolling Three-Month Average	0.15 micrograms (µg) /cubic meter of air (m ³)	Same as Primary
NO ₂	Annual Arithmetic Mean	0.053 ppm (100 µg/m ³)	Same as Primary
	One-hour	0.100 ppm ²	None
O ₃	Eight-hour (2015 standard) ⁴	0.070 ppm	Same as Primary
PM _{2.5}	Annual Arithmetic Mean	12 µg/m ³ ⁽¹⁾	15 µg/m ³
	24-hour	35 µg/m ³	Same as Primary
PM ₁₀	24-Hour	150 µg/m ³ ⁽¹⁾	Same as Primary
SO ₂	One-hour	75 parts per billion (ppb) ⁽³⁾	None
	Three-hour	None	0.5 ppm

Notes:

- For PM₁₀, the 24-hour standard not to be exceeded more than once per year on average over three years. For PM_{2.5}, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or are less than the standard.
- To attain this standard, the three-year average of the 98th percentile of the daily maximum one-hour average at each monitor within an area must not exceed 0.100 ppm (effective January 22, 2010).
- Final rule signed June 2, 2010. To attain this standard, the three-year average of the 99th percentile of the daily maximum one-hour average at each monitor within an area must not exceed 75 ppb.
- EPA updated the NAAQS for O₃ to strengthen the primary eight-hour standard to 0.07 ppm on October 1, 2015. An area will meet the standard if the fourth-highest maximum daily eight-hour ozone concentration per year, averaged over three years is equal to or less than 70 ppb.

General Conformity Rule

The General Conformity Rule⁸ defines a federal action as any activity engaged in by a department, agency, or instrumentality of the federal government, or any activity that a department, agency, or instrumentality of the federal government supports in any way, provides financial assistance for, licenses, permits, or approves. General Conformity is defined as demonstrating that a project or action conforms to the SIP's

⁷ United States Environmental Protection Agency. [Monitor Values Report | US EPA](https://www.epa.gov/outdoor-air-quality-data/monitor-values-report). <https://www.epa.gov/outdoor-air-quality-data/monitor-values-report>.

⁸ The General Conformity Rule⁸ applies to all federal actions except for certain highway and transit programs which must comply with the Transportation Conformity Plans. Revisions to the General Conformity Rule are codified under 40 CFR Parts 51 and 93, Subpart W, Revisions to the General Conformity Regulations, Final Rule (April 2010). 40 CFR Part 93, Subpart A.

purpose of eliminating or reducing the severity and number of violations of the NAAQS and achieving expeditious attainment of such standards. Federally funded and approved actions at airports are subject to the EPA's general conformity regulations.

The General Conformity Rule includes annual emissions thresholds for nonattainment and maintenance areas that trigger the need for a General Conformity determination and defines projects that are typically excluded from General Conformity requirements. Since the General Conformity Rule applies to federally funded projects in EPA-designated non-attainment and maintenance areas, the General Conformity requirements apply to projects at 2M8.⁹

3.3.1.2 Environmental Consequences

Potential air quality impacts associated with clearing, cutting and removal of trees associated with the Project are discussed in this section. The Preferred Alternative would not induce additional aircraft operations compared to the No Action; therefore, aircraft operations were not included in the analysis.

No Action Alternative

The No Action Alternative assumes that project activities are not implemented, and air quality would remain unchanged. Therefore, no air quality impacts would occur as a result of the No Action Alternative.

Preferred Alternative

Comparing the inventory of air pollutant emissions associated with each of those items to the General Conformity *de minimis* thresholds for significance is the basis for evaluating the potential for impacts.

The methods used to calculate emissions of CO, volatile organic compounds (VOCs), oxides of nitrogen (NOx), sulfur oxides (SOx), PM₁₀, PM_{2.5} and GHGs from tree cutting and clearing-related activities are documented in this section. The emissions analysis was conducted to develop emissions pursuant to the NEPA, as well as to determine whether emissions associated with the Preferred Alternative would exceed applicable *de minimis* thresholds as documented in the EPA's General Conformity regulations to determine significant air quality impacts and compliance with the NAAQS.

Pollutant emissions resulting from tree cutting and clearing related activities associated with Preferred Alternative were estimated using standard industry methodologies and techniques. Emissions were not estimated for the No Action Alternative, because no tree cutting or clearing activity would be associated with that alternative.

The cutting and clearing associated with the Preferred Alternative would result in short-term changes in air emissions from sources such as exhaust from nonroad construction equipment such as:

- excavators
- dozers
- skid steers
- tractors
- haul trucks
- chainsaws

⁹ Charles W Baker Airport is located in an EPA-designated maintenance area for some pollutants.

On-road vehicles include those associated with construction worker trips and truck trips associated with tree removal. Additionally, fugitive dust emissions sources include equipment movement on unpaved roads and land and wind erosion.

The tree cutting and clearing activities associated with the Preferred Alternative are expected to occur during 2023. **Table 3-2** presents the primary components of the activities, along with the duration in days and brief description of the activities.

Table 3-2
Tree Cutting and Clearing Activities for 2023

Project Component	Duration	Description
Phase 1 Non-Wetland Clearing	25 days	Clear, grade, seed, and cover in the upland portion of the project area
Phase 1 East Side Access Road	5-15 days	Create, stabilize, and maintain east side access road
Phase 2 Wetland Tree Cutting	35 days	Wetland area and upland buffer zone trees will be cut, trees outside buffer zone will be removed or burned
Phase 3 Buffer Area Tree Topping	55 days	Upland and stream buffer zone trees will be topped and cut as appropriate, large trees that fall in the buffer zone will be removed or burned
Trucks associated with Offsite Tree disposal	220 trips	Trips to remove trees in cleared area and wetland buffer area
Trees and Vegetative material burning	90 days	Burn trees from the cleared area in accordance with Shelby County Health Department
Source: MSCAA Email correspondence, March 18, 2022.		

A construction emission analyses requires a detail construction schedule such as the type of equipment, the amount of time of operation of such equipment, estimates of construction material and trips, employee activity, etc. This detailed construction data was developed by MSCAA for each activity and used for this analysis. In addition to the construction schedule, emissions factors for nonroad and on-road construction equipment, as well as for fugitive emission sources using EPA and industry standard models and methodologies were developed. The current version of the EPA’s Motor Vehicle Emission Simulator (MOVES) emission model, (Version MOVES 3.0.3), which includes the latest version of the NONROAD model was used to develop on-road and nonroad emission factors. These emission factors were applied to estimates of vehicle miles traveled and construction equipment (hours, horsepower, load factor), respectively, for each construction activity for 2023 to estimate emissions in tons per year. Emission factors generated in NONROAD assume the phasing of Tier 1, Tier 2, Tier 3, and Tier 4 engines over time based on EPA regulations.¹⁰ In addition, vehicle truck trips associated with offsite tree removal and were included as part of the inventory. Additional assumptions included:

- All employee passenger trips use unleaded gasoline; assume a roundtrip distance of 30 miles
- All construction equipment use diesel fuel
- Additional truck trips associated with offsite tree disposal have a round trip distance of 40 miles
- Each vehicle is assumed to travel 5 miles per day for the calculation of fugitive re-entrained PM emissions from on-road and non-road material delivery and handling equipment

¹⁰ U.S. Environmental Protection Agency. NonRoad Technical Reports, Exhaust and Crankcase Emission Factors for Nonroad Compression-Ignition Engines in MOVES2014b (PDF) (177 pp, 15.4 MB, EPA-420-R-18-009, July 2018).

- Operating hours are 7AM to 6PM, 5 days per week
- 40 employees work on site each day

The construction emissions calculations for the Preferred Alternative are presented in **Appendix B**.

Summary of Construction Emissions

Construction-related emissions of criteria pollutants in tons per year associated with the Preferred Alternative for 2023 are summarized in **Table 3-3** and includes employee trips and truck trips associated with offsite tree removal and disposal. For this analysis, GHG emissions associated with the Preferred Alternative were prepared for disclosure purposes as carbon dioxide equivalent (CO_{2e}) in metric tons per year relevant to their global warming potential.¹¹ It should be noted that lead emissions were not estimated for this analysis as only diesel and unleaded gasoline fuels are expected to be used as part of the construction activity, and lead emissions from these fuels are negligible.

Table 3-3
Construction Emission Inventory – Preferred Alternative

Year	Relevant Criteria Pollutant Emissions (tons per year)							
	CO	VOC ¹	NO _x ¹	SO ₂	PM ₁₀	PM _{2.5}	Lead ³	CO _{2e} ²
2023	1.34	0.07	0.51	0.002	0.07	0.04	0.0	502
Notes: 1. Following standard industry practice, ozone was evaluated by evaluating emissions of VOC and NO _x , which are precursors in the formation of ozone. 2. CO _{2e} emissions are in metric tons per year equivalent relevant to their GWP. 3. Diesel and unleaded gasoline will be used in the construction vehicles, therefore lead emissions from these sources is negligible. Source: HMMH, 2022, Based on MOVES3.0.3 results using construction information provided by MSCAA, March 2022.								

As provided in FAA Order 1050.1F, an action would cause a significant air quality impact if pollutant concentrations would exceed one or more of the NAAQS established by the EPA under the CAA, for any of the time periods analyzed or would increase the frequency or severity of any such existing violations. Additionally, the CAA requires federal agencies to ensure their actions conform to the appropriate State Implementation Plan (SIP). Conformity requires that a project or action adheres to the SIP’s purpose of eliminating or reducing the severity and number of violations of the NAAQS and achieving expeditious attainment of such standards. As stated in **Section 3.3.1.2**, the General Conformity Rule applies to this Project. If General Conformity applies, an applicability analysis is performed to determine if a General Conformity Determination is required to demonstrate that the Preferred Alternative conforms to the approved SIP(s).

Federal *de minimis* emission thresholds for maintenance areas relevant to Shelby County are listed in **Table 3-4** in order to determine significant impacts for those pollutants that are designated as attainment (e.g., NO_x, SO_x, PM₁₀ and PM_{2.5}).

¹¹ Global warming potentials are based on the latest Intergovernmental Panel on Climate Change (IPCC), Fifth Assessment Report (AR5), November 2014.

Table 3-4
General Conformity *De Minimis* Pollutant Emission Thresholds

Pollutants	Attainment Status (Severity)	Pollutants	Threshold (tons Per Year)
Carbon Monoxide (CO)	Maintenance	CO	100
Ozone (O ₃) ¹	Maintenance	Nitrogen Oxides (NO _x)	100
		Volatile Organic Compounds (VOC)	100
Lead	Maintenance	Pb	25

Notes:
1. Following standard industry practice, ozone was evaluated by evaluating emissions of VOC and NO_x, which are precursors in the formation of ozone.
Source: <https://www.epa.gov/general-conformity/de-minimis-tables>.

Table 3-5 presents the total construction emissions in tons per year associated with tree cutting and clearing of the Preferred Alternative for 2023 compared with the appropriate *de minimis* thresholds. As the table shows, the total emissions would be below established *de minimis* thresholds for all pollutants. Therefore, a General Conformity determination is not required for the construction activities for the Preferred Alternative. Additionally, in accordance with the FAA Air Quality Handbook, the Preferred Alternative can be determined to “not cause a significant air quality impact, since it is unlikely the pollutant concentration analyzed would exceed a NAAQS.” Air quality impacts resulting from construction would be below the level of significance for the Preferred Alternative when Maintenance *de minimis* thresholds were used for this analysis to determine the level of significance under NEPA for those pollutants designated as attainment (i.e., SO₂, PM₁₀ and PM_{2.5}) by the EPA for Shelby County.

Table 3-5
Total Construction Emissions Compared to *De Minimis* Thresholds

Year	Relevant Criteria Pollutant Emissions (tons per year)						
	CO	VOC	NO _x	SO ₂	PM ₁₀	PM _{2.5}	Pb ¹
2023							
Total Emissions of Construction and Demolition	1.34	0.07	0.51	0.002	0.07	0.04	0.0
EPA De Minimis Threshold	100	100	100	100	100	100	25
Emissions below <i>de minimis</i> thresholds?	Yes	Yes	Yes	Yes	Yes	Yes	Yes

Notes:
1. Emissions from lead are negligible based on expected fuel usage of diesel and unleaded gasoline.
Source: HMMH, 2022.

Air Curtain Destructors (ACD)

Felled trees would be burned onsite, in compliance with a burn permit from the Shelby County Health Department. A propriety air curtain destructor (ACD) (Air Burners Inc.) is proposed to minimize smoke associated with tree burning activities. The use of the self-contained ACD, Air Burners blows a continuous sheet of air across the self-contained burning container to increase burning efficiency and significantly reduce smoke and fly ash emissions. All burning activities would be conducted in accordance with a Shelby County Health Department burn permit, which would be obtained by the contractor prior to the start of proposed activities.

3.3.2 Biological Resources

3.3.2.1 Affected Environment

Biological resources are valued for their intrinsic, aesthetic, economic, and recreational qualities, and include fish, wildlife, plants, and their respective habitats. Typical categories of biological resources include: Terrestrial and aquatic plant and animal species; Game and non-game species; Special status species (state- or federally listed threatened or endangered species, marine mammals, or species of concern, such as species proposed for listing or migratory birds); and environmentally sensitive or critical habitats.

The project area consists of upland and forested wetland and stream areas within the project area. The project area is predominantly wooded and undeveloped, excepting approximately 15.4 acres of actively managed farmland on the east central portion. There are several wetlands and streams within the project area. A discussion of water resources is included in **Section 3.3.12**. The principal drainage on the project area is an unnamed, 2nd order tributary to the Loosahatchie River. The stream enters the project area along the north central project area boundary and flows south across the north central project area before shifting west to flow south along the west boundary, then turning east along the central southern boundary before turning south again to flow along the southern project area extension east of the Airport.

During surveys in both March 2019 and November 2021, biologists identified herbaceous and aquatic habitat at the project area. The upland portions of the project area were primarily wooded or fallow agricultural fields. The wooded areas consisted of typical hardwoods, including various oaks (*Quercus spp.*), hickories (*Carya spp.*), sweetgum (*Liquidambar styracifolia*), and scattered black cherry (*Prunus serotina*). Within the wooded portions of onsite wetlands common species included American sycamore (*Platanus occidentalis*), maples (*Acer spp.*), green ash (*Fraxinus pennsylvanica*), American elm (*Ulmus americana*), swamp cottonwood (*Populus heterophylla*), and occasional bald cypress (*Taxodium distichum*).

Emergent, understory species in the herbaceous wetlands included wood oats (*Chasmanthium spp.*), cattails (*Typha latifolia*), smartweed (*Polygonum spp.*) and various rush and sedge (primarily *Carex spp.*).

As part of this evaluation, informal consultation with the U.S. Fish and Wildlife Service (USFWS), Tennessee TDEC Natural Heritage Program, and the Tennessee Wildlife Resources Agency (TWRA) was initiated to determine whether any state-listed, federally-listed or candidate species or designated critical habitat are likely to be adversely affected by proposed activities. In addition, the USFWS Information for Planning and Consultation (IPaC) website was reviewed for a list of federally protected species and migratory birds with the potential to occur in the area. An informal level of consultation with the USFWS and TWRA was determined to be appropriate, based on survey and research of the biological resources and inspection of the project area conducted by Tioga's biologists in March 2019 and November 2021.

Table 3-6 includes a list of threatened, endangered, or special status species whose occurrences have been documented in Shelby County and have the potential to occur in the project area. The species listed are either federally designated by the USFWS and listed on the IPaC output, or by the State of Tennessee and published in the TDEC, Division of Natural Areas, Interactive Rare Species Database. Output from IPaC and the TDEC database is included in **Appendix C**.¹²

¹² Resources include <https://ipac.ecosphere.fws.gov/> and https://dataviewers.tdec.tn.gov/pls/enf_reports/f?p=9014:3:3031824848602. Accessed March 2022.

Table 3-6
Species of Concern

Scientific Name	Common Name	Federal Status	State Status
Amphibian			
<i>Acris gryllus</i>	Southern Cricket Frog	No Status	Rare, Not listed
Birds			
<i>Sternula antillarum athalassos</i>	Interior Least Tern	No Status	Endangered
<i>Thryomanes bewickii</i>		No Status	Needs management ¹
<i>Setophaga cerulea</i>	Cerulean Warbler	No Status	Needs management
<i>Vireo bellii</i>	Bell's Vireo	No Status	Rare, Not listed
<i>Limnothlypis swainsonii</i>	Swainson's Warbler	No Status	Needs management
Fish			
<i>Cycleptus elongatus</i>	Blue Sucker	No Status	Threatened
<i>Noturus gladiator</i>	Piebald Madtom	No Status	Needs management
<i>Ammocrypta beani</i>	Naked Sand Darter	No Status	Needs management
Insects			
<i>Lycaena hyllus</i>	Bronze Copper	No Status	Rare, Not listed
<i>Danaus plexippus</i>	Monarch Butterfly	Candidate	No Status
Mammals			
<i>Neotoma floridana illinoensis</i>	Eastern Woodrat	No Status	Needs management
<i>Myotis septentrionalis</i>	Northern Long-eared Bat	Threatened	No Status
<i>Myotis sodalis</i>	Indiana Bat	Endangered	No Status
Mollusks			
<i>Webbhelix multilineata</i>	Striped Whitelip	No Status	Rare, Not listed
<i>Obovaria jacksoniana</i>	Southern Hickorynut	No Status	Rare, Not listed
<i>Lampsilis siliquoidea</i>	Fatmucket	No Status	Rare, Not listed
Flowering Plants			
<i>Rhynchospora harveyi</i>	Harvey's Beakrush	No Status	Threatened
<i>Symphyotrichum praealtum</i>	Willow Aster	No Status	Endangered
<i>Magnolia virginiana</i>	Sweetbay Magnolia	No Status	Threatened
<i>Schisandra glabra</i>	Red Starvine	No Status	Threatened
<i>Silene ovata</i>	Ovate Catchfly	No Status	Endangered
<i>Iris fulva</i>	Copper Iris	No Status	Threatened
<i>Ulmus crassifolia</i>	Cedar Elm	No Status	Special Concern
<i>Panax quinquefolius</i>	American Ginseng	No Status	Special Concern
<i>Heteranthera multiflora</i>	Multiflowered Mud-plantain	No Status	Special Concern
<i>Hottonia inflata</i>	American Featherfoil	No Status	Special Concern
Reptiles			
<i>Pituophis melanoleucus</i>	Northern Pinesnake	No Status	Threatened
<p>1. "Needs Management" is for any species or subspecies of nongame wildlife that the Executive Director of the TWRA believes should be investigated in order to develop information relating to populations, distribution, habitat needs, limiting factors, and other biological and ecological data to determine management measures necessary for continued ability to sustain themselves successfully. This status does not impose any additional assessment or mitigation requirements.</p> <p>Sources: TDEC: https://dataviewers.tdec.tn.gov/pls/enf_reports/f?p=9014:3:3031824848602. USFWS: https://ipac.ecosphere.fws.gov/.</p>			

Designated critical habitat is not present the project area. The USFWS tracks the occurrence of the endangered Indiana Bat (*Myotis sodalis*) and threatened Northern Long-Eared Bat (*Myotis septentrionalis*) in Tennessee. The USFWS bat occurrence maps included in **Appendix C** indicate the listed bat species do not occur in Shelby County.¹³

Consultation with USFWS via IPaC resulted in a determination of “No effect” regarding the Indiana Bat, as there are no documented occurrences of the Indiana Bat in southwest Tennessee. For the Northern Long-Eared Bat, a “may affect” determination was made for this species based on the potential for suitable summer habitat occurring in the project area. However, the Preferred Alternative qualifies for coverage under the 2016 “Programmatic Biological Opinion on Final 4(d) Rule for the Northern Long-Eared Bat and Activities Excepted from Take Prohibitions,” which allows for any incidental take of the NLEB for actions such as the proposed activities.

Consultation with TWRA resulted in a response from the agency that, “At this time, due to the nature and location of the Project, it is the opinion of the Tennessee Wildlife Resources Agency (TWRA) that this Project should not have adverse impacts to listed species under our authority. TWRA does require that BMPs [best management practices] be implemented throughout the project footprint as well as during any and all active construction.” The TWRA correspondence noted further that the agency would agree with any comments or concerns that the USFWS may submit.

In addition, the Tennessee Natural Heritage Program noted that the Swainson's warbler (*Limnothlypis swainsonii*) has been observed in the forested area of Parcel No. D0136 000.56, which would be impacted by the project and that the Southern Cricket Frog (*Acris gryllus*) is known from sites less than four miles southeast and southwest of the project area, but not within the project area. All agency correspondence is included in **Appendix D**.

3.3.2.2 Environmental Consequences

Per the FAA Order 1050.1F Desk Reference, a significant impact would occur when the USFWS or the NMFS determines that an action would be likely to jeopardize the continued existence of a federally-listed threatened or endangered species, or would result in the destruction or adverse modification of federally-designated critical habitat.

Additional factors to consider that may be applicable to biological resources include, but are not limited to, situations in which the alternative(s) would have the potential for:

- A long-term or permanent loss of unlisted plant or wildlife species, i.e., extirpation of the species from a large project area (e.g., a new commercial service airport);
- Adverse impacts to special status species (e.g., state species of concern, species proposed for listing, migratory birds, bald and golden eagles) or their habitats;
- Substantial loss, reduction, degradation, disturbance, or fragmentation of native species’ habitats or their populations; or
- Adverse impacts on a species’ reproductive success rates, natural mortality rates, non- natural mortality (e.g., road kills and hunting), or ability to sustain the minimum population levels required for population maintenance.

¹³ Conservation Strategy for Forest-dwelling Bats in Tennessee. U.S. Fish and Wildlife Service, Tennessee Ecological Services Field Office. October 5, 2017.

No Action Alternative

Under the No Action Alternative, proposed activities would not occur and there would be no impacts to biological resources.

Preferred Alternative

The Preferred Alternative would not have short-term or permanent adverse impacts on biological resources. No critical habitat is identified within the project area, and no threatened or endangered species are known to be present.

Although there have been no historical recordings of the presence of the Northern Long-Eared Bat in the area, a “may affect” determination was made for this species based on the potential for suitable summer habitat occurring in the project area. However, as previously stated, the Preferred Alternative qualifies for coverage under the 2016 “Programmatic Biological Opinion on Final 4(d) Rule for the Northern Long-Eared Bat and Activities Excepted from Take Prohibitions”, which allows for any incidental take of the NLEB for activities such as the Preferred Alternative.

The Tennessee Natural Heritage Program provided a response letter regarding project activities and stated that, based on the habitat within the project area and the plan to use mechanical clearing (rather than herbicide) for the Preferred Alternative, the agency did not anticipate any impacts to occurrences of rare, threatened, or endangered plant species from this project.

In addition, the Tennessee Natural Heritage Program response suggested MSCAA coordinate with Tennessee Wildlife Resources Agency to ensure that legal requirements for protection of state listed rare animals are addressed as well as USFWS, which was conducted for this project. The Tennessee Natural Heritage Program also suggested implementation of best management practices to address erosion and sediment during construction activities. Best management practices during construction would be employed as part of the Preferred Alternative.

The guidelines of Executive Order 13112 would be adhered to while conducting tree removal and tree topping activities to control and prevent the spread of any invasive species. Executive Order 13112, *Invasive Species*, requires the prevention and control of invasive species. It directs federal agencies to not authorize, fund, or carry out actions that they believe are likely to cause or promote the introduction or spread of invasive species in the U.S. unless the agency has determined and made public its determination that the benefits of such actions clearly outweigh the potential harm caused by invasive species, and that all feasible and prudent measures to minimize risk of harm will be taken in conjunction with the actions.

3.3.3 Climate

3.3.3.1 Affected Environment

Scientific measurements show that Earth’s climate is warming, with concurrent impacts including warmer air temperatures, increased sea level rise, increased storm activity, and an increased intensity in precipitation events. Increasing concentrations of greenhouse gas emissions in the atmosphere affect global climate.^{14,15} Greenhouse gas emissions result from anthropogenic sources, including the combustion

¹⁴ Intergovernmental Panel on Climate Change, *Fifth Assessment Report*, 2014. <https://www.ipcc.ch/report/ar5/syr/9>. Accessed September 28, 2018.

¹⁵ U.S. Global Change Research Program, *Global Climate Change Impacts in the United States*, 2009, <http://www.globalchange.gov/what-we-do/assessment/previous-assessments/global-climate-change-impacts-in-the-us-2009>. Accessed September 28, 2018.

of fossil fuels. These include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), ozone (O₃), and fluorinated gases,¹⁶ and CO₂ is the most important anthropogenic GHG because it is a long-lived gas that remains in the atmosphere for up to 100 years.

Per FAA Order 1050.1F, where a project's alternative(s) would result in an increase in greenhouse gases emissions, the emissions should be assessed either qualitatively or quantitatively. Although no federal standards have been set for greenhouse gas emissions, it is well established that greenhouse gas emissions can affect climate.

Memphis and Shelby County developed a Climate Action Plan,¹⁷ a strategic framework for measuring and reducing their carbon footprint that will sustain the community into the future. The planning process was led by the Memphis-Shelby County Office of Sustainability. In collaboration with stakeholders from government, private business, utilities, nonprofit organizations, and the public, this planning process identified actions to reduce greenhouse gas emissions, address climate change, improve public health, and increase community sustainability. The three pieces of the climate action plan are as follows:

- Greenhouse gas emission inventory;
- Achievable greenhouse gas reduction targets; and
- Implementation - Action and Strategies

Using 2016 data, Memphis and Shelby County completed an inventory of the Memphis area's greenhouse gas emissions.¹⁸ The 2016 inventory resulted in a total of 17,191,915 metric tons of CO₂ equivalent (CO₂e). In this inventory, most of the emissions were comprised of energy (46 percent), followed by transportation sources (42 percent), and waste¹⁹ (12 percent).

3.3.3.2 Environmental Consequences

Proposed activities would not induce additional aircraft operations and therefore aircraft operations were not included in the analysis.

No Action Alternative

The No Action Alternative assumes that the Project is not implemented, and air quality would remain unchanged and therefore, would not affect climate.

Preferred Alternative

GHG emissions associated with the Preferred Alternative were estimated for carbon dioxide, methane, and nitrous oxide using the air quality analysis discussed in **Section 3.3.1**. GHG emissions are presented as carbon dioxide equivalent (CO₂e) in metric tons per year relevant to their global warming potential.²⁰ As previously stated, there are no defined significance thresholds for aviation GHG emissions, nor has FAA's guidance documents identified any factors to consider in making a significance determination for GHG emissions.

¹⁶ U.S. Environmental Protection Agency, Overview of Greenhouse Gases, <http://www3.epa.gov/climatechange/ghgemissions/gases.html> (accessed May 11, 2017).

¹⁷ <https://www.develop901.com/osr/memphisClimateActionPlan>. Accessed March 2022.

¹⁸ <https://www.develop901.com/osr/ghgInventory>

¹⁹ Waste includes solid waste disposal in landfills and wastewater treatment processes.

²⁰ The carbon dioxide equivalent is estimated by taking the mass equivalent of each pollutant (TPY) and multiplying by the global warming potential equivalent (GWP) of each pollutant and adding them together. For example, the GWP of CO₂ is 1, CH₄ is 28 GWP, and N₂O is 265 GWP, according to the IPCC Fifth Assessment Report.

Table 3-7 presents the greenhouse gas emissions for construction activities for 2023. The GHGs associated with the Preferred Alternative have been calculated in accordance with the latest FAA guidelines (1050.1F) for climate impacts and included in the emission spreadsheets in **Appendix A**.

Table 3-7
GHG Emissions for Construction of the Preferred Alternative

Year	Greenhouse Gases (metric tons/year)			CO ₂ e (metric tons/year) ^{Note 2}
	CO ₂	CH ₄	N ₂ O	
Construction¹				
2023	500	0.003	0.010	502
Notes: 1. Construction emissions derived from ACEIT and EPA MOVES3.0.3 2. Emissions are reported as metric tons of carbon dioxide equivalents to present a normalized unit of greenhouse gas emissions based on the global warming potential of each gas. CO ₂ e is a combination of CO ₂ emissions with the CO ₂ -equivalent emissions of other greenhouse gases. Source: HMMH 2022				

As shown in **Section 3.3.1**, construction emission under the Preferred Alternative would result in an impact to air quality that would be below the level of significance, since it is unlikely the pollutant concentration analyzed would exceed a NAAQS. Similarly, any GHG emissions increase from construction and operational activity associated with the Preferred Alternative would comprise a very small fraction of the baseline Memphis and Shelby County GHG emissions of 17,191,915 metric tons of carbon dioxide equivalents (MMTCO₂e), the U.S. based emissions of 6,472 MMTCO₂e, and even less than the 49 gigatons of carbon dioxide equivalent global GHG emissions.^{21,22,23} Therefore, the emissions resulting from the Preferred Alternative would be short-term and temporary and would not result in adverse effects from GHG emissions.

3.3.4 Department of Transportation Act Section 4(f)

3.3.4.1 Affected Environment

Section 4(f) of the U.S. Department of Transportation Act of 1966 protects significant publicly owned parks, recreational areas, and wildlife and waterfowl refuges that are open to the public, as well as public and private historic sites (collectively, Section 4(f) properties). Section 4(f) provides that the Secretary of Transportation may approve a transportation program or project requiring the “use” of a Section 4(f) property only if there is no feasible and prudent alternative to using the Section 4(f) property, and the program or project includes all possible planning to minimize harm to the Section 4(f) property resulting from the use. The Section 4(f) regulations define three types of “use” of Section 4(f) properties (23 CFR § 774.17):

- Land from the Section 4(f) property is permanently incorporated into a transportation facility;
- There is a temporary occupancy of land that is adverse in terms of the statute’s preservation purpose, as determined by the criteria in 23 CFR § 774.13(d);²⁴ or

²¹ <https://www.develop901.com/osr/ghgInventory>.

²² <https://www.epa.gov/sites/production/files/2019-02/documents/us-ghg-inventory-2019-main-text.pdf>.

²³ http://ipcc.ch/publications_and_data/ar4/syr/en/contents.html.

²⁴ Temporary occupancy results when Section 4(f) property, in whole or in part, is required for project construction-related activities. The property is not permanently incorporated into a transportation facility, but the activity is considered to be adverse in terms of the preservation purpose of Section 4(f).

- There is a “constructive” use of a Section 4(f) property, as defined in 23 CFR § 774.15(a).²⁵

As described below in **Section 3.3.7**, the Tennessee Historical Commission confirmed via agency correspondence there are no National Register of Historic Places listed or eligible properties within the project area and no such resources that would be affected by implementation of the Preferred Alternative (**Appendix D**). As described below in **Section 3.3.8**, there are no publicly owned parks, recreational areas, or wildlife and waterfowl refuges located within the project area and no such resources that would be affected by implementation of the Preferred Alternative. Therefore, there are no Section 4(f) properties in the project area or within the Project’s potentially affected area.

3.3.4.2 Environmental Consequences

As no Section 4(f) resources are present in the project area or within the Project’s potentially affected area, further evaluation is not required.

3.3.5 Farmlands

3.3.5.1 Affected Environment

Farmlands are defined in FAA guidance as those agricultural areas considered important and protected by federal, state, and local regulations. Important farmlands include all pasturelands, croplands, and forests considered to be prime, unique, or of statewide or local importance. Farmland does not include land already in or committed to urban development or water storage.

The project area is predominantly wooded and undeveloped, excepting approximately 15.4 acres of actively managed farmland on the east central portion (**Figure 2**). Mapping for the area was reviewed from the United States Department of Agriculture (USDA), Natural Resources Conservation Service (NRCS) Web Soil Survey, included in **Appendix E**. The soil survey indicates that the project area is primarily composed of five soil types: Adler, Falaya, Memphis, Grenada, and Loring. Four of the onsite soil types (Adler, Falaya, Memphis, and Grenada), when at less than 5 percent slope, are considered Prime Farmland in Shelby County, Tennessee. In total, approximately 67 acres of the project area contains soils of the four types designated as Prime Farmlands (**Figure 6**).²⁶

Consultation with the USDA’s NRCS Nashville, TN office was initiated on April 29, 2022 regarding whether the Preferred Alternative involved conversion of farmland to non-agricultural use (**Appendix D**). The USDA responded “... clear-cutting does not represent conversion of the prime farmlands since the land isn’t being taken out of agricultural production. Therefore, an AD-1006 form will not be needed at this time.”

3.3.5.2 Environmental Consequences

Direct impacts to farmlands typically involve the conversion of farmlands to non-agricultural use. Per the FAA Order 1050.1F Desk Reference, actions that may result in farmland conversion include: construction of a new airport or commercial space launch site and associated facilities and infrastructure, the expansion of an existing facility, land acquisition for aviation-related use, or new or relocated access roadways and remote parking facilities.

²⁵ “A constructive use occurs when the transportation project does not incorporate land from a Section 4(f) property, but the project’s proximity impacts are so severe that the protected activities, features, or attributes that qualify the property for protection under Section 4(f) are substantially impaired.”

²⁶ <https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx>

No Action Alternative

There would be no changes to farmlands under the No Action Alternative.

Preferred Alternative

The Preferred Alternative would not convert Prime or Important farmlands to non-agricultural uses and would not result in short-term or long-term adverse impacts on farmland.

3.3.6 Hazardous Materials, Solid Waste, and Pollution Prevention

3.3.6.1 Affected Environment

According to FAA Order 1050.1F Desk Reference, hazardous materials, solid waste, and pollution prevention as an impact category includes an evaluation of the following:

- Waste streams that would be generated by a project, potential for the wastes to impact environmental resources, and the impacts on waste handling and disposal facilities that would likely receive the wastes
- Potential hazardous materials that could be used during construction and operation of a project, and applicable pollution prevention procedures
- Potential to encounter existing hazardous materials at contaminated sites during construction, operation, and decommissioning of a project
- Potential to interfere with any ongoing remediation of existing contaminated sites at a proposed project site or in the immediate vicinity of a project site

The affected environment considered for hazardous materials, solid waste, and pollution prevention includes any contaminated sites within or in the immediate vicinity of the project area. The affected environment for this resource area also includes the local disposal capacity for solid and hazardous wastes generated from the alternatives considered. The identification of regulatory / contaminated sites and local solid and hazardous waste disposal capacity are discussed in the following subsections.

Regulatory / Contaminated Sites

An ASTM E1527-2013 compliant Phase I Environmental Site Assessment (ESA) was conducted for the project area in November/December 2021 (**Appendix F**). The Phase I ESA identified that the northern and eastern portions of the project area were used as agricultural land beginning with the earliest aerial photographs in 1937, but that no indications of use of agricultural products (i.e. fertilizers, pesticides, and herbicides) outside manufacturer recommendations were observed. The Airport was identified in the review as having an Underground Storage Tank (UST) and Historical UST (HIST UST) site under Facility ID: 9-790382 and currently operating two 12,000-gallon USTs, one for jet fuel and one for gasoline. The tanks are located approximately 900 feet southwest of the nearest point of the project area. No violations or records of release were identified relative to this use.

The Phase I ESA identified six other listed sites within one mile of the project area, as shown in **Table 3-8**.

Files for each of these sites were reviewed and, except for McInnes Rolled Rings, all sites are either closed with no further action required or were assessed and found to require no remedial action. Additionally, except for the Former Raggetts Grocery site, these facilities are presumed to be downgradient of the project area with respect to groundwater. Therefore, Phase I ESA concluded that there were no Recognized Environmental Conditions relative to the project area.

Table 3-8
Phase I ESA Facilities Near Project Area

Facility Name	Facility ID	Facility Status	Distance and direction from project area	Resolution
Former Raggetts Grocery	SRS791029	Closed	0.29 miles north	Two 300-gallon USTs closed in place.
Millington #5	79626	No further action	0.54 miles south	Construction debris dumping – no further investigation.
Gulf and Western Taylor	79574	Closed	0.80 miles southwest	Site Prioritization Report recommended no further action
McInnes Rolled Rings	SRS790844	Open – in monitoring	0.80 miles southwest	Soil and groundwater monitoring of VOC contamination confirmed to be restricted to the property
SCA Chemical SRVS, Inc.	79509	N/A	0.81 miles southwest	Facility never constructed
Earth Industrial Waste	79506	No further action	0.92 miles southwest	Site Prioritization Report recommended no further action

Waste Disposal

The TDEC Division of Solid Waste Management regulates material recovery facilities, transfer stations, and landfills for sanitary or municipal solid waste, industrial waste, farming wastes, and construction and demolition waste. There is no waste production occurring within the project area.

3.3.6.2 Environmental Consequences

Factors to consider that may be applicable to hazardous materials, solid waste, and pollution prevention include, but are not limited to, situations in which alternative(s) would have the potential to:

- Violate applicable federal, state, tribal, or local laws or regulations regarding hazardous materials and/or solid waste management;
- Involve an unmitigated contaminated site;
- Produce an appreciably different quantity or type of hazardous waste;
- Generate an appreciably different quantity or type of solid waste or use a different method of collection or disposal and/or would exceed local capacity; or
- Adversely affect human health and the environment.

No Action Alternative

There would be no changes to hazardous materials, solid waste, or pollution prevention under the No Action Alternative.

Preferred Alternative

No short-term or permanent impacts relative to hazardous materials, solid waste, or pollution prevention are anticipated for the Preferred Alternative. There are no identified contaminated sites or storage or use of hazardous materials within the project area and no unmitigated contaminated sites in the vicinity with potential to impact the project area.

The Preferred Alternative would not generate hazardous waste. Any non-hazardous wastes associated with the Preferred Alternative, including but not limited to: materials destined for disposal, unforeseen damages and repairs, cleanup, surface stabilization, and leaks and spills, would be handled in accordance with the TDEC *Solid Waste Management Rule 0400*, Chapter 11 for Solid Waste and Chapter 12 for Hazardous Waste. In addition, MSCAA would monitor project activities and require best management practices and incident reporting to be implemented, if necessary. With these protocols in place, the Preferred Alternative would not result in adverse effects from the generation of or exposure to hazardous wastes and contaminated materials.

3.3.7 Historic, Architectural, Archaeological, and Cultural Resources

3.3.7.1 Affected Environment

Historical, architectural, archaeological, and cultural resources encompass a range of sites, properties, and physical resources relating to human activities, society, and cultural institutions. Such resources include past and present expressions of human culture and history in the physical environment, such as prehistoric and historic archaeological sites, structures, objects, and districts that are considered important to a culture or community. Historical, architectural, archaeological, and cultural resources also include aspects of the physical environment, namely natural features and biota, which are a part of traditional ways of life and practices and are associated with community values and institutions.

This assessment of historic, architectural, archaeological, and cultural resources complies with Section 106 of the National Historic Preservation Act.

The Area of Potential Effect (APE) for archaeology is limited to areas where ground-disturbing activities would take place (i.e., tree stump removal). As ground-disturbing activities would be limited to approximately 45 acres of vegetated (non-wetland and non-stream) area, this area is the APE for archaeology. A review of the Tennessee Division of Archaeology (TDOA) files, conducted by TDOA staff in the fall of 2021, revealed that there are no previously recorded archaeological sites located within the APE.

A Phase I cultural resources survey of the project area was conducted in February 2022. Within a two-kilometer radius of the APE, there are eight previously recorded archaeological sites; six of the previously recorded sites are located on elevated terraces flanking the Loosahatchie River floodplain and two of the sites are located in uplands. The results of the survey recommended that no sites or resources be determined eligible or potentially significant and that no further work was recommended (**Appendix G**).

The APE for architectural and historic resources is limited to the viewshed of the project area. This area has been defined as being within an approximately 200-foot radius from the site boundary. It should be noted that the APE includes wooded areas around portions of the project area's east, north, and west edges. A tree-lined rail line, which runs west and north of the project area and borders its northwest corner, acts as a visual buffer between the site and the residential streets to the northwest. The Airport forms parts of the south and west borders of the project area.

There are no properties listed on the National Register of Historic Places (NRHP) located within the APE (**Figure 7**). A review of the Tennessee Historical Commission (THC) Geographic Information System (GIS) survey of historic resources reveals one recorded property within the APE. This is SY-32762A, the Lucy Elementary School at 6269 School Road. Built in 1920, it is a Rosenwald School that has been altered with several modern additions. This property was surveyed in 1996 and recommended by the surveyor as ineligible for NRHP listing due to alterations.

A review of the THC GIS survey of historic resources also revealed 15 recorded properties in the surrounding area (east and south of the visual buffer of the rail line). All of these properties are houses built in the early 20th century. Like the Lucy Elementary School, they were surveyed in 1996 and recommended by the surveyor as ineligible for NRHP listing.

Additional properties in the surrounding include: the buildings of the Charles W. Baker airport; early-to-mid 20th century houses north of the project area along Amherst and Pleasant Ridge Roads and to the east of the project area on Raleigh Millington Road; and a mini-storage facility, gas station, and Dollar General store on Raleigh Millington Road, which all appear to date to the late 20th century. None of these additional properties in the surrounding area appear to be eligible for listing on the NRHP.

3.3.7.2 Environmental Consequences

In a letter dated April 1, 2022, the THC, State Historic Preservation Office, concurred that there are no National Register of Historic Places listed or eligible properties in the project area. Therefore, further analysis is not required.

3.3.8 Land Use

3.3.8.1 Affected Environment

Land use is evaluated with respect to consistency with existing land uses as well as state and local plans. In addition to the primary statutes, regulations, Executive Orders, and other requirements related to land use listed in 1050.1F and its Desk Reference, local considerations include the Memphis 3.0 Comprehensive Plan and the Memphis and Shelby County Unified Development Code.

The affected environment evaluated for land use includes the project area and a one-half of a mile study area surrounding the project area. Land acquisition from six privately-owned parcels would be required for the Project; however, only the portion of each parcel that would be required for the actual tree clearing would be acquired. The one-half of a mile land use study area includes the full extent of the six parcels subject to partial acquisition.

Most of the project area is undeveloped, forested land (**Figure 8**). Along the western boundary is part of a single-family residential lot containing several homes along Chase Road, and the southern strip that borders the eastern boundary of the Airport includes portions of industrial, commercial, and single-family residential uses.

Within the land use study area, single-family residential uses in the community of Lucy dominate the area north and west of the project area. These areas are separated from the site by a freight rail line that provides a physical and visual barrier between these residential areas and the project area. To the northeast of the project area, Lucy Elementary School is located on Amherst Road and a cemetery, Pleasant Rest Memorial Gardens, is located on Raleigh-Millington Road. The eastern portion of the land use study area is primarily vacant land; this includes both forested and agricultural parcels. The Airport is south of the project area, and to the southwest is the Memphis International Raceway, a privately-owned automobile racing facility that hosts large racing events.

Zoning of the project area and study area are shown on **Figure 9**. As shown in the figure, the project area is primarily zoned Conservation Agriculture (CA)²⁷ and Heavy Industrial (IH),²⁸ with a linear Employment (EMP)²⁹ zone cutting across the site. The study area contains these zones as well as Commercial Mixed Use (CMU-1, CMU-2, CMU-3),³⁰ Floodway (FW),³¹ and Residential Urban (RU-1, RU-2, RU-3)³² zones.

3.3.8.2 Environmental Consequences

No Action Alternative

There would be no changes to land use under the No Action Alternative.

Preferred Alternative

Under the Preferred Alternative, six parcels north and east of the Airport would be partially acquired for selective tree topping and tree removal. No zoning changes would be required, and no land use changes would occur. Although the affected lots are partially developed with residences and farmland, MSCAA would acquire only a small, undeveloped port of each lot. No homes or buildings would be acquired, and a wide buffer would remain between the lot areas to be acquired and the buildings on each lot.

Preparation of the site would adhere to the Memphis and Shelby County Unified Development Code. The Preferred Alternative is not in conflict with the objectives of federal, regional, state, or local land use plans, policies, or controls for the area and all land acquisition would comply with the Uniform Relocation Assistance Act of 1972.³³

3.3.9 Noise and Compatible Land Use

3.3.9.1 Affected Environment

The surrounding land uses to the project area consist of forested land, railroad tracks, and residential to the northeast and west of the project area. There are noise sensitive locations near the site, which are the elementary school and homes along S. Amherst Road. The project area is north of the Airport and experiences aircraft overflights. No noise contours have been developed for the Airport, but the site is likely outside any higher airport noise areas from the airport.

Regarding land use compatibility, documentation must support the Airport sponsor's assurance under 49 U.S.C. § 47107(a)(10) that appropriate action, including the adoption of zoning laws, has been or will be taken, to the extent reasonable, to restrict the use of land adjacent to or in the immediate vicinity of the

²⁷ The CA District is intended to conserve agricultural land and undeveloped natural amenities while preventing the encroachment of incompatible land uses on farmland and other undeveloped areas.

²⁸ The IH district is intended to accommodate high-impact manufacturing, industrial or other uses, including extractive and waste-related uses.

²⁹ The EMP District is intended to accommodate office, light manufacturing, research and development, warehousing, wholesale, processing, and commercial uses.

³⁰ CMU districts are intended to accommodate retail, service, and commercial uses and ensure that commercial-zoned areas are compatible with the character of existing neighborhoods. While the districts primarily accommodate commercial uses, apartments, and upper-story residential are allowed in order to promote live/work and mixed-use opportunities; single-family detached is also permitted.

³¹ The FW District is intended to allow specified uses that will not create flood hazards and not be unduly damaged, if flooded.

³² RU districts are intended to accommodate development where the land-use pattern is predominately urban in character or where such a land use pattern is desired in the future. The RU districts are intended to provide for a variety of housing opportunities at intensities compatible with surrounding land uses.

³³ In 1972, Tennessee enacted the Uniform Relocation Assistance Act of 1972, which generally followed the provisions of the federal act and had the effect of making relocation assistance and land acquisition procedures mandatory for any projects conducted by state agencies or supported by state financial assistance.

airport to activities and purposes compatible with normal airport operations, including takeoff and landing of aircraft. The assurance must be related to existing and planned land uses. The Airport Development Grant Program (see 49 U.S.C. § 47101) requires that a project may not be approved unless the Secretary of Transportation is satisfied that a project is consistent with plans (existing at the time a project is approved) of public agencies for development of the area in which the airport is located (see 49 U.S.C. § 47106(a)(1)).

3.3.9.2 Environmental Consequences

Proposed activities would not affect aircraft operations; therefore, no aircraft noise analysis is included.³⁴ The Project includes an analysis of surface transportation impacts, including construction noise, which was conducted using accepted methodologies from the Federal Highway Administration (FHWA) for highway noise as directed by FAA guidance. **Appendix H** provides detailed information on each of these aspects of noise characterization and the noise analysis.

FAA guidance does not provide significance thresholds for construction noise and therefore, state and local ordinances were referenced in attempt to identify potential construction noise impacts. Article III within the Shelby County Code or Ordinances provides noise regulations at a county level. However, these regulations do not include construction activities nor provide noise level limits in which noise must adhere to. Similarly, the City of Memphis does not provide noise level limits within its municipal code that construction activities would have to adhere to.

The Federal Transit Authority (FTA) provides guidance for the evaluation of construction noise in *Transit Noise and Vibration Impact Assessment Manual*. In developing their guidance, FTA recognizes that local noise ordinances are not always useful for the evaluation of construction noise, since local ordinances generally relate to nuisance and hours of allowed activity. FTA guidance suggests that construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the activities, and adjacent land use. While it is not the intent of the FTA guidance to specify standardized criteria for construction noise impact, FTA offers guideline values for construction noise that may lead to adverse community reaction if they are exceeded. For residential land use, the General Assessment guideline values are an hourly equivalent sound level (L_{eq}) of 90 dBA during the day (from 7:00 a.m. to 10:00 p.m.) and 80 dBA at night (from 10:00 p.m. to 7:00 a.m.).

No Action Alternative

The No Action Alternative assumes no activities would occur and noise levels would remain unchanged. Therefore, no additional noise impacts would occur as a result of the No Action Alternative.

Preferred Alternative

Tree removal activities associated with the Preferred Alternative would result in temporary elevated noise levels at nearby noise sensitive receptors related to equipment working in the project area and construction vehicles entering and existing the area. Increases in existing noise levels due to construction activities have the potential to adversely affect noise sensitive land uses around the project area. Noise sensitive receptors

³⁴ For typical airport related noise analysis, the FAA requires the use of the Day-Night Average Sound Level (DNL), the noise metric used in all FAA noise studies in airport communities. A cumulative sound level, DNL provides a measure of total sound energy. DNL is a logarithmic average of the sound levels of multiple events at a location over a 24-hour period, with a 10-decibel (dB) weighting added to all sounds occurring during nighttime hours (between 10:00:00 p.m. and 6:59:59 a.m.). The 10 dB increase for nighttime events represents the added intrusiveness of noise that occurs during typical sleeping hours. Ambient sound levels during nighttime hours are typically about 10 dB lower than during daytime hours. Expressing a DNL implies decibels, thus the “dB” nomenclature is omitted herein, e.g., “65 DNL” expresses a DNL of 65 dB. A DNL of 65 dB is the level most used for noise planning purposes and is typically the threshold that is considered noncompatible for residential properties and other noise sensitive areas.

can be located indoors or outdoors and include but are not limited to residences, hotels, motels, schools, places of worship, health care facilities, and parks.

Noise sensitive receptors were identified adjacent to the project area and include single family residential structures along S. Amherst Road, Waverly Farms Road, Wagon Hill Road, and Chase Road as well as Lucy Elementary School, located along School Road, north of the project area. Distances between these receptors and the proposed work will vary throughout the duration of activities, depending on where work is occurring on-site, and can vary between 425 feet and 2,900 feet.

Analysis Methodology

Noise effects from on-site construction were evaluated by determining the noise levels generated by different types of construction activity and calculating the construction-related noise level at the closest noise-sensitive receptor locations. Construction noise levels can vary depending on equipment type, condition of the equipment, and the type of work the equipment is doing. Annoyance due to construction noise is variable and can result from the use of specific equipment, such as impact pile driving, pavement breakers, as well as mobile equipment working on site and engines idling for extended periods of time.

On-site construction activities include the removal of trees and wetlands and the creation of an east side access road. Implementation of these activities is assumed to occur in 2023 for various durations and are summarized in **Table 3-9**.

Table 3-9
Construction Activities and Durations

Project Component	Duration	Description
Phase 1 Non-Wetland Clearing	25 days	Clear, grade, seed, and cover in the upland portion of the project area
Phase 1 East Side Access Road	5-15 days	Create, stabilize, and maintain east side access road
Phase 2 Wetland Tree Cutting	35 days	Wetland area and upland buffer zone trees will be cut, trees outside buffer zone will be removed or burned
Phase 3 Buffer Area Tree Topping	55 days	Upland and stream buffer zone trees will be topped and cut as appropriate, large trees that fall in the buffer zone will be removed or burned
Trucks associated with Offsite Tree disposal	220 trips	Trips to remove trees in cleared area and wetland buffer area
Trees and Vegetative material burning	90 days	Burn trees from the cleared area in accordance with Shelby County Health Department

As per FAA Order 1050.1F Desk Reference, noise sources other than aircraft departures and arrivals should be evaluated using accepted methodologies implemented for other agencies when FAA guidance lacks specifics. The U.S. Department of Transportation Federal Highway Administration’s (FHWA’s) Roadway Construction Noise Model (RCNM) was used for predicted on-site construction activities that are proposed for the duration of the Preferred Alternative. This model requires the input of estimated construction equipment usage, which is the source of noise from construction activities. Equipment lists were obtained for each construction activity from the Airport Construction Emissions Inventory Tool (ACEIT) that is used for developing construction equipment schedules and analyzing air pollutant emissions from the project’s activities. The construction-related noise levels were predicted at receptors using a spreadsheet model that

implements RCNM calculations and methodology. **Table 3-10** lists the construction equipment that was identified in ACEIT as being used in the Preferred Alternative and the RCNM2.0-equivalent equipment type. The source level for each type of equipment is listed as the average maximum sound level (L_{max}) in A-weighted decibels (dBA) at a reference distance of 50 feet. The L_{max} descriptor is the highest sound level measured during a single noise event (such as a vehicle pass by), in which the sound level varies.

Table 3-10
Construction Noise Emissions Levels

Equipment	RCNM Equipment	Source Level (Average L _{max} @ 50 feet)
Bulldozer	Dozer	86
Chain Saw	Power Tools – Chain Saw	83
Dump Truck	Dump Truck (cyclical)	92
Excavator With Bucket	Excavator	87
Passenger Car	Pickup Truck	75
Skid Steer Loader	Front End Loader (Cyclical)	81
Tractor	Front End Loader (Cyclical)	81

Analysis and Results

Construction of the Preferred Alternative would commence in 2023 and will be completed in approximately one year. Construction activities would result in temporary elevated noise levels from on-site construction equipment and delivery/haul trucks used for equipment and material delivery and haul trips along local roads surrounding the work area. Roadways carrying worker vehicles and heavy truck traffic to and from the work area would experience an increase in traffic during certain periods of the day, however, the traffic increases would be temporary in nature and not result in significant impacts to receptors adjacent to these routes.

During typical workdays, construction noise levels would fluctuate and often be lower than these predicted worst case levels. Additionally, the analysis only accounts for the maximum noise level produced by a single piece of construction equipment and does not include other noise sources that make up the existing noise environment, such as airport operations and traffic noise from surrounding roadways. Due to the influence of these other noise sources, the overall contribution from construction activities related to the Preferred Alternative is not anticipated to significantly impact noise sensitive receptors when compared to the existing noise environment. An overview of analysis locations and work areas are depicted within **Figure 10**.

Results from the construction noise analysis are presented within **Table 3-11**. The loudest noise levels are predicted to occur at receptors closest to the work area and with direct line of site to the construction activities. This analysis conservatively predicts the loudest noise levels that can be expected using the shortest distance between receptors and construction activities.

While elevated noise levels at sensitive receptors can be expected for various periods of time once work begins in 2023, predicted construction noise levels are below the applied guidance values for community reaction to noise. Overall, project-related construction noise levels are anticipated to be the loudest during non-wetland tree clearing and the creation of the east side access road during Phase 1 work. During Phase 1 work, the residence located at 6144 Amherst Road is predicted to experience the highest noise levels. Noise levels associated with Phase 2 and Phase 3 work are predicted to be the highest at 6144 Amherst Road and residences along Wagon Hill Road and Waverly Farms Road. During tree and vegetative material burning,

noise levels are anticipated to be the loudest at Lucy Elementary School due to the use of excavators and skid steer loaders.

Although predicted construction noise levels are below the applied guidance values, the following measures are recommended for the contractor to reduce the effects of construction noise on noise sensitive areas:

- Provide appropriate manufacturer's noise reduction devices, including, but not limited to a manufacturer's muffler (or equivalently rated material) that is free of rust, holes, and exhaust leaks on construction equipment operating on site.
- Ensure that the engine housing doors are kept closed on construction devices with internal combustion engines.
- Cover equipment, such as compressors, generators, pumps, and other such devices with noise insulating fabric as well as operate the device at lower engine speeds during work to the maximum extent possible.
- Use operational controls, such as limiting vehicle engine idling on-site and time-of-day restrictions for certain activities.
- Use quieter or ambient-sensitive back-up alarms on construction equipment whenever practical.
- Strategically position construction vehicles to minimize operation near receptors and direct construction haul vehicles away from receptors when traveling to and from the work site.
- Use noise pathway controls, including noise barriers and enclosures free from gaps and holes, placed as close as possible to construction areas.

Table 3-11
Range of Predicted Construction Sound Levels, dBA

Project Component	Receiver	Receiver Description	Land Use	Range of Project-Related Sound Levels, dBA Lmax ¹
Phase 1 Non-Wetland Tree Clearing	R-1	5984 Chase Rd	Residential	43 – 60
	R-2	Lucy Elementary School ²	School	46 – 63
	R-3	6144 Amherst Rd	Residential	54 – 71
	R-4	Homes near Wagon Hill Road and Waverly Farms Road	Residential	41 – 57
Phase 1 East Side Access Road	R-1	5984 Chase Rd	Residential	43 – 60
	R-2	Lucy Elementary School ²	School	46 – 63
	R-3	6144 Amherst Rd	Residential	54 – 71
	R-4	Homes near Wagon Hill Road and Waverly Farms Road	Residential	41 – 57
Phase 2 Wetland Tree Cutting	R-1	5984 Chase Rd	Residential	47 – 63
	R-2	Lucy Elementary School ²	School	46 – 62
	R-3	6144 Amherst Rd	Residential	47 – 63
	R-4	Homes near Wagon Hill Road and Waverly Farms Road	Residential	39 – 55
Phase 3 Buffer Area Tree Topping	R-1	5984 Chase Rd	Residential	47 – 63
	R-2	Lucy Elementary School ²	School	46 – 62
	R-3	6144 Amherst Rd	Residential	47 – 63
	R-4	Homes near Wagon Hill Road and Waverly Farms Road	Residential	39 – 55
Tree and Vegetative Material Burning	R-1	5984 Chase Rd	Residential	42 – 54
	R-2	Lucy Elementary School ²	School	56 – 68
	R-3	6144 Amherst Rd	Residential	52 – 64
	R-4	Homes near Wagon Hill Road and Waverly Farms Road	Residential	40 – 52

Notes:

1. Lmax noise level represents noisiest piece of equipment to be use during each construction phase.
2. Typical use of non-residential land uses, such as schools, places of worship, parks, and libraries, is during daytime hours and would not be considered sensitive during overnight hours.

Source: HMMH, 2022

3.3.10 Socioeconomics, Environmental Justice, Children’s Environmental Health and Safety Risks

3.3.10.1 Affected Environment

Socioeconomics describes the aspects of a community that are either social or economic in nature, or a combination of the two. A socioeconomic analysis evaluates how a project might affect population, employment, housing, and public services. The primary FAA statute relating to socioeconomic impacts is the Uniform Relocation Assistance and Real Property Acquisitions Policy Act of 1970 (49 CFR Part 24), which provides federal funding for projects that acquire real property or involve the displacement of people. Additionally, the Act directs the agency to observe all state and local laws, regulations, and ordinances concerning zoning, transportation, economic development, and housing when planning, assessing, or implementing a project.

Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. “Fair treatment” implies that no group of people should bear a disproportionate effect of the negative environmental impacts resulting from a project. Environmental Justice analysis considers whether minority and/or low-income populations would experience potential environmental or health impacts from a project, and whether any such impacts would fall disproportionately on those populations.

Should significant impacts resulting from a project be identified in any environmental resource category, the potential for disproportionately high and adverse effects on minority or low-income populations must be further examined. The CEQ, which has oversight of the Federal government’s compliance with Executive Order 12898 (*Federal Actions to Address Environmental Justice in Minority Populations and Low-income Populations*) and NEPA, has developed guidance to assist Federal agencies with their NEPA procedures so that environmental justice concerns are effectively identified and addressed. Federal agencies are permitted to supplement this guidance with more specific procedures tailored to their particular programs or activities; FAA Order 1050.1F serves as the FAA policy and procedures for compliance with NEPA and implementing regulations issued by CEQ.

Executive Order 13045, *Protection of Children from Environmental Health Risks and Safety Risks*, encourages federal agencies to identify and assess environmental health risks and safety risks that could disproportionately affect children. Environmental health risks and safety risks are attributable to products or substances that a child is likely to come into contact with or be exposed to, such as air, food, water, and recreational waters. The Task Force on Environmental Health Risks and Safety Risks to Children, created by EO 13045, identified four priority areas of impacts to children for attention: asthma, unintentional injuries, developmental disorders (including lead poisoning), and cancer.

The affected environment is comprised of Shelby County Census Tract 202.21, Block Group 1, and Census Tract 202.22, Block Groups 1 and 2 (**Figure 11**). According to the U.S. Census Bureau American Community Survey (ACS) 2016-2020 five-year estimates, there is a total population of 4,645 within the study area, of which approximately 43 percent are white. **Tables 3-12** through **3-15** present information about age, race, household income, poverty, and employment characteristics in the study area.

Table 3-12 shows the breakdown of population in the study area, Shelby County, and Tennessee by age groups. The majority of the population in the study area is of working age, between the ages of 18-64. This is consistent with Shelby County and Tennessee. Approximately 23 percent of the population within the affected environment is under the age of 18. There is one school in the study area: Lucy Elementary School, located just north of the project area at 6269 Amherst Road (**Figure 8**).

Table 3-12
Population: Age Groups

	Census Tract 202.21, Block Group 1	Census Tract 202.22, Block Group 1	Census Tract 202.22, Block Group 2	Study Area	Shelby County	Tennessee
Child Population (Age Under 18)	413	296	342	1,051	234,172	1,507,890
18-64 Population	1,320	542	1,082	2,944	575,488	4,156,814
65+ Population	260	166	224	650	126,951	1,107,564
Total Population	1,993	1,004	1,648	4,645	936,611	6,772,268
Source: U.S. Census Bureau ACS 2016-2020 five-year estimates, Table B01001.						

Table 3-13 shows the racial diversity of the study area, as compared to Shelby County and Tennessee. As shown in these tables, each Block Group in the study area, and the study area as a whole, has a larger percentage of minority population than Tennessee, though not as large as Shelby County. Block groups that have over 50 percent minority population would be considered environmental justice communities; therefore, as all three block groups in the study area have over 50 percent minority population, they are therefore considered environmental justice populations for this analysis due to their minority percentage.

Table 3-13
Population: Race

	Block Group 1, Census Tract 202.21		Block Group 1, Census Tract 202.22		Block Group 2, Census Tract 202.22		Study Area		Shelby County		Tennessee	
White	895	44.9%	478	47.6%	629	38.2%	2,002	43.1%	329,976	35.2%	4,969,371	73.4%

Total Population	1,993	100%	1,004	100%	1,648	100%	4,645	100%	936,611	100%	6,772,268	100%

Source: U.S. Census Bureau ACS 2016-2020 five-year estimates, Table B03002.

Table 3-14 presents median income and poverty status in the study area. Median household income in each block group is similar to or higher than the county and state levels, and the study area overall has lower poverty than the county and state. However, Census Tract 202.21, Block Group 1 has a higher percentage of households below the poverty level than either Shelby County or Tennessee. Block groups that have higher poverty than the county would be considered environmental justice communities; therefore, while the overall study area is not a low-income population, Census Tract 202.21, Block Group 1 is considered an environmental justice area for this analysis due to its poverty level.

Table 3-14
Households: Median Income and Poverty Status

	Census Tract 202.21, Block Group 1	Census Tract 202.22, Block Group 1	Census Tract 202.22, Block Group 2	Study Area	Shelby County	Tennessee
Total Households	669	330	509	1,508	356,607	2,639,445
Median Household Income	\$58,802	\$50,357	\$65,806	\$58,322	\$52,092	\$54,833
Income Below Poverty Level	20.6%	3.6%	9.2%	11.1%	14.4%	14.6%
Source: U.S. Census Bureau ACS 2016-2020 five-year estimates, Table B23025.						

According to the 2016-2020 ACS, approximately 57 percent of the working-age population (over 16 years of age) in the study area is employed. This is comparable to Shelby County (approximately 59 percent) and Tennessee (approximately 58 percent) (**Table 3-15**).

Table 3-15
Employment Status for Population 16 and Over

	Census Tract 202.21, Block Group 1	Census Tract 202.22, Block Group 1	Census Tract 202.22, Block Group 2	Study Area	Shelby County	Tennessee
Employed	939	341	830	2,110	431,683	3,147,330
Unemployed	30	0	103	133	34,314	177,361
Not in Labor Force	632	375	424	1,431	260,558	2,093,324
Total Population 16 and Over	1,601	716	1,357	3,674	726,555	5,418,015
Source: U.S. Census Bureau ACS 2016-2020 five-year estimates, Tables B17021, 25003, and 19013.						

3.3.10.2 Environmental Consequences

No Action Alternative

There would be no changes to socioeconomics, environmental justice, or children’s environmental health and safety under the No Action Alternative.

Preferred Alternative

The Preferred Alternative would not displace residences or businesses, and therefore, it would not change the socioeconomic characteristics of the study area. The Preferred Alternative may result in minor short-

term beneficial impacts with respect to socioeconomics through an increase in job availability during project activities. The Project would not disrupt or divide the physical arrangement of an established community and would not result in disruption or relocation of any local businesses, public services, or housing units. Therefore, the Preferred Alternative would not result in adverse short-term, long-term, or permanent effects on socioeconomic conditions.

An environmental justice analysis considers a project's potential to cause disproportionately high and adverse effects on low-income or minority populations. USDOT Order 5610.2(a) defines a disproportionately high and adverse effect on environmental justice populations as an adverse effect that is predominately borne by a minority population and/or a low-income population or will be suffered by the environmental justice population and is appreciably more severe or greater in magnitude than the adverse effect that will be suffered by the non-minority population and/or non-low-income population. Because the project area is an environmental justice community, identified adverse impacts are further considered through the lens of environmental justice. This evaluation has identified minor short-term effects to resources areas related to the use of heavy equipment on-site as part of project implementation. However, no adverse impacts have been identified, and therefore, the Preferred Alternative would not lead to any disproportionately high and adverse impacts to environmental justice populations.

Environmental health and safety impacts to children are evaluated as a separate resource because children may experience the intensity of these impacts differently, when compared to adults exposed to the same Preferred Alternative. Children are more heavily exposed to toxins in proportion to their body weight and are more likely to exhibit behaviors that put them at a greater risk for exposure to hazards (FAA 2020).

The project area is located adjacent to Lucy Elementary School, and tree cutting and topping activities associated with implementation of Phase III of the Project would occur in close proximity to the school property. MSCAA would ensure that rigorous safety protocols are established to ensure that there would be no effects on the school or its students. While Phase III project activities are ongoing, construction fencing will be used to demarcate the Phase III project area and prevent unauthorized access to the project area from school grounds, ensuring that children could not access the work area. MSCAA will ensure that the tree removal contractor will not allow felled trees to fall outside of this fencing. Provisions will be included in the contract to enforce these rules. MSCAA would schedule Phase III work nearest to school property while school is not in session as an additional safety precaution. When Phase III activities are complete, access points to the project area will be blocked by gates or fencing.

The Preferred Alternative would not be associated with environmental health risks attributable to substances that a child is likely to come in contact with or ingest, such as toxic products, soil, or drinking water, as the Project would not generate any hazardous substances, nor would it create any pathways to human or environmental exposure to such substances (see **Section 3.3.6**). In addition, air emissions associated with the Preferred Alternative are anticipated to have only minor, short-term adverse impacts on air quality, when compared to the No Action Alternative based on mobile source emissions related to proposed activities.

The Preferred Alternative would not lead to a disproportionate health or safety risk to children, relating to asthma, unintentional injuries, developmental disorders, or cancer. Therefore, there would be no long-term impacts on socioeconomics, environmental justice, or children's health and safety with the Preferred Alternative, and no mitigation measures are required.

3.3.11 Visual Effects

3.3.11.1 Affected Environment

Visual effects deal broadly with the extent to which a project would either (1) produce light emissions that create annoyance or interfere with activities or (2) contrast with, or detract from, the visual resources and/or the visual character of the existing environment.

Light emissions include any light that emanates from a light source into the surrounding environment. Visual resources include buildings, sites, cultural properties, and other natural or man-made landscape features that are visually important or have unique characteristics. Visual character refers to the overall visual makeup of the existing environment where the proposed activities would be located. For example, areas in close proximity to large population centers generally have a visual character that could be defined as urban, whereas less developed areas could have a visual character defined by surrounding landscape features, such as open grass fields, forests, mountains, or deserts.

The project area consists of forested wetland areas located north and east of Runway 18/36, east of Chase Road, and west of Amherst Road and Raleigh Millington Road. As described in **Section 3.3.8**, the surrounding land uses consist of a mix of vacant (forested and agricultural) land, single-family residential, a small commercial development, a cemetery, an elementary school, and an automobile racing facility.

Light Emissions

The current level of light emissions at the project area includes the reception of glare and vehicle lighting emanating primarily from the Airport and adjacent roadways. Given the project area's location relative to the Airport's flight paths, overhead aircraft traffic also contributes to the light emissions at the site, and events at the Memphis International Raceway periodically contribute additional light emissions.

Visual Resources and Visual Character

The visual character of the project area is characterized by forested areas, semi-open forest meadows, and agricultural fields. The streams and wetlands in the project area are primarily located in densely wooded areas. The visual character of surrounding land uses is consistent with the rural-to-suburban nature of the area and the mixture of vacant land, single-family residential, small commercial and institutional uses, a large automobile racing facility, and the Airport itself. **Figures 12 and 13** provides representative views of the project area and surrounding area, and a photo location key map.

3.3.11.2 Environmental Consequences

No Action Alternative

There would be no changes to light emissions, visual resources, or the visual character of the project area and surrounding areas under the No Action Alternative.

Preferred Alternative

Portions of the project area are visible from adjacent roadways and land uses. The Preferred Alternative consists of tree removal and selective tree topping activities, conducted in phases. While upland portions of the project area would be clear-cut, wetland and stream areas and associated buffer zones would be selectively cut and no clear cutting would occur in these areas. These areas would remain vegetated and would serve to maintain existing visual barriers between the Airport and nearby roadways and land uses as a result of proposed activities. The Preferred Alternative would not result in no new views of the Airport from nearby vantage points.

Light Emissions

The Preferred Alternative would not result in short- or long-term adverse impacts due to light emissions when compared to the No Action Alternative. All clearing activities proposed would occur during daytime hours, therefore the Preferred Alternative would not result in any new sources of nighttime light emissions during construction. Upon completion, the Preferred Alternative would not create new visual pathways that would expose vantage points to additional sources of light emissions.

Visual Resources and Visual Character

The Preferred Alternative would result in minor long-term changes to visual character when compared to the No Action Alternative, as existing trees would be removed within the project area. Some areas that are currently forested would be clear cut and converted to open grassed areas, while other portions of the project site would remain forested. However, the permanent overall visual character of the project area would remain consistent with current conditions, which consist of a mix of forested and open areas. Therefore, there would be no adverse change to visual character of the project area or nearby areas.

3.3.12 Water Resources

3.3.12.1 Affected Environment

Water resources are surface waters and groundwaters that are important in providing drinking water and in supporting recreation, transportation, commerce, industry, agriculture, and aquatic ecosystems. This evaluation includes analysis of the potential for disruption of water systems as well as potential impacts to the quality of water resources. This section includes analysis of the following: wetlands and surface waters, floodplains, and groundwater.

Wetlands and Surface Waters

Wetlands and other waters were preliminarily identified within the project area through the use of site inspection and delineation, available U.S. Geological Survey (USGS) topographical maps, the National Wetlands Inventory (NWI) database, and NRCS soils maps. Additionally, a delineation of all jurisdictional waters in the project area has been completed by wetlands scientists trained with the U.S. Army Corps of Engineers (USACE) Wetlands Delineation and Management Training Program standards and using the 1987 Corps guidance manual and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Atlantic and Gulf Coastal Plain Region (Version 2.0)*, November 2010. Onsite channels were additionally evaluated using TDEC's *Guidance for Making Hydrologic Determinations, Version 1.5*, April 2020. Features identified are detailed in **Table 3-16** and the full delineation report of the project area is included as **Appendix I**.

Two second-order intermittent streams (STR-1, STR-2) were identified within the project area. STR-1 enters the site from the north and flows south through the project area, acting as the primary onsite drainage system. STR-1 demonstrated strong morphology, with defined bed-and-banks and an ordinary high water mark. STR-1's lower reach north of the Airport has been ponded by beaver activity but re-channelizes as it leaves the northern portion of the project area and flows into the southern portion and east of the Airport.

STR-2 flows into the project area from the southwest corner, fed by drainage off the adjoining agricultural fields. STR-2 was noted to have a defined head cut (offsite), moderate morphology and hydrology, and importantly, was noted to have significant presence of macrobenthic organisms immediately upon entering the lower elevations within the project area.

Table 3-16

Streams, Ephemeral Channels and Wetlands Identified During Field Investigation

Feature ID	Length / Area	Cowardin Class	Classification	
			USACE	State of TN
Streams				
STR-1	8,627 feet, 2.97 acres	R4SB5	Intermittent Stream	Stream
STR-2	628 feet, 0.15 acres	R4SB5	Intermittent Stream	Stream
Ephemeral Channels				
EPH-1	351 feet	N/A	Ephemeral Stream	Wet Weather Conveyance
EPH2	772 feet	N/A	Ephemeral Stream	Wet Weather Conveyance
EPH3	118 feet	N/A	Ephemeral Stream	Wet Weather Conveyance
Wetlands				
WTL-1	21.5 acres	PFO6E, PSS1Eb	Wetland	Wetland
WTL-2	3.38 acres	PFO1B	Wetland	Wetland
WTL-3 (Linear)	302 feet, 0.07 acres	PUB3C	Wetland	Wetland
WTL-4 (Linear)	158 feet, 0.036 acres	PUB3C	Wetland	Wetland

Three ephemeral channels / wet weather conveyances (EPH-1 to EPH-3) were delineated within the project area. EPH-1 is a series of interconnected upland erosional ditches draining off the east adjoining agricultural fields. EPH-2 and EPH-3 were small channels (relative to the onsite streams) that may have been historic stream channels that have been altered by past onsite and offsite activity to no longer carry significant flow. These channels lacked an ordinary high water mark and other significant hydrologic and biologic criteria necessary to be classified as streams.

Floodplains

According to the Federal Emergency Management Agency Flood Insurance Map 47157C0170F dated September 28, 2007, most of the project area is located in an unshaded Zone X area.³⁵ Unshaded Zone X is an area determined to be outside the 0.2 percent annual chance floodplain. A small portion of the southern leg of the subject Property is located within a shaded Zone X and Shaded Zone AE. Shaded Zone X is an area determined to be within the 0.2 percent annual chance floodplain and Shaded Zone AE is an area determined to be within the 1 percent annual chance flood. A copy of the applicable portion of the flood map is included as **Figure 14**.

Groundwater

The U.S. Geological Survey Water - Resources Investigations Report 85-4295 for the Memphis, Tennessee area, indicates the geology of the general area is of loess at a thickness of 0-65 feet. This material consists of silt, silty clay, and minor sand and tends to retard downward movement of water.

The principal freshwater aquifers in the Memphis area, in descending order, are: (1) the alluvium, (2) the fluvial (terrace) deposits, (3) the Memphis Sand ("500-foot" sand), and (4) the Fort Pillow Sand ("1,400-

³⁵ Federal Emergency Management Agency, Flood Insurance Rate Map, Shelby County, Tennessee, Panel #47157C0170F, September 28, 2007. Accessed April 8, 2022.

foot" sand). The alluvium and fluvial deposits make up the shallow water table (unconfined) aquifers, which are usually separated from the underlying artesian aquifers by the Jackson-Upper Claiborne confining bed. Most of the water used for municipal and industrial supplies in the Memphis area is derived from the Memphis Sand.

Based on the Shelby County Water Table Plate, 2005, the depth to shallow groundwater is approximately 20 to 40 feet below ground surface. Groundwater flow for the project area is likely southwest, towards the Loosahatchie River.³⁶

A review of the TDEC DWR (Drinking Water Unit) online TN Water Well Desktop Application (**Figure 15**), indicates that no water wells are located within the project area.

3.3.12.2 *Environmental Consequences*

No Action Alternative

There would be no changes to or impacts to water resources under the No Action Alternative.

Preferred Alternative

Wetlands and Surface Waters

Regarding wetlands and surface waters, per the FAA Order 1050.1F Desk Reference, a significant impact to wetlands would occur when the action would:

- Adversely affect a wetland's function to protect the quality or quantity of municipal water supplies, including surface waters and sole source and other aquifers;
- Substantially alter the hydrology needed to sustain the affected wetland system's values and functions or those of a wetland to which it is connected;
- Substantially reduce the affected wetland's ability to retain floodwaters or storm runoff, thereby threatening public health, safety or welfare (the term welfare includes cultural, recreational, and scientific resources or property important to the public);
- Adversely affect the maintenance of natural systems supporting wildlife and fish habitat or economically important timber, food, or fiber resources of the affected or surrounding wetlands;
- Promote development of secondary activities or services that would cause the circumstances listed above to occur; or
- Be inconsistent with applicable state wetland strategies.

Similarly, a significant impact to surface waters exists if the action would exceed water quality standards established by federal, state, local, and tribal regulatory agencies or contaminate public drinking water supply such that public health may be adversely affected.

Additional surface water factors that should be considered include, but are not limited to, situations in which an alternative(s) would have the potential to:

- Adversely affect natural and beneficial water resource values to a degree that substantially diminishes or destroys such values;

³⁶ Larsen, Daniel, Dr., Professor and Chair of Earth Sciences, University of Memphis, Memphis, TN. Shallow Aquifer Water Elevation Surface, Shelby County, Tennessee, Fall 2005.

- Adversely affect surface waters such that the beneficial uses and values of such waters are appreciably diminished or can no longer be maintained and such impairment cannot be avoided or satisfactorily mitigated; or
- Present difficulties based on water quality impacts when obtaining a permit or authorization.

The Preferred Alternative would not result in short-term or long-term adverse impacts to wetlands. Impacts to water resources would be avoided through utilization of the methodologies outlined in **Section 1.2** and other appropriate BMPs. Per consultation with the USACE and TDEC, the Preferred Alternative does not require permitting relative to Sections 401 or 404 of the CWA or the Tennessee Water Quality Control. However, an Aquatic Resource Alteration Permit (ARAP) is anticipated for one temporary stream crossing in the northern portion of the project area (in the Phase I area) to allow for trucks to get to the west side of the site.

Floodplains

The Preferred Alternative would have no short-term or long-term adverse impacts to floodplains. The majority of the project area is not located within a designated 100-year or 500-year flood zone. No construction in or modification of floodplains is proposed. Impacts to floodplains would be avoided through utilization of the methodologies outlined in **Section 1.2** and other appropriate BMPs.

Groundwater

The Preferred Alternative would have no effects on groundwater resources.

3.4 Cumulative Impacts

The CEQ NEPA regulations (40 CFR 1508.7) define a cumulative impact as "...the impact on the environment, which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency, Federal or non-Federal, or person undertakes such other actions. Cumulative impacts can result from individually minor, but collectively significant, actions taking place over a period of time."

There are no recently completed or current projects in the project area, at the airport, or in the vicinity that would result in adverse effects to natural resources or vegetation that would contribute a cumulative effect on the area's resources or surrounding community.

There are several future projects planned at the Airport, as confirmed by MSCAA and detailed in the MSCAA Strategic Overview (2022-2024):³⁷

- | | |
|---|---|
| • Construction of a New Terminal Building | Target Date for Construction: 2023-2024 |
| • Airfield Pavement Improvements | Target Date for Construction: 2023 |
| • Rehabilitation of Apron Pavement | Target Date for Construction: 2024-2025 |
| • Apron Expansion for Hangar Development | Target Date for Construction: 2026-2027 |
| • Rehabilitation of Runway 18/36 | Target Date for Construction: 2027-2028 |

These projects may result in disturbance within airport property, including impacts to pavement and facilities, but not to natural resource areas. These projects would occur on previously-disturbed areas

³⁷ https://flymemphis.com/wp-content/uploads/2022/06/MSCAA_FinalDraft_LR_March2022.pdf. Accessed July 13, 2022.

within airport property and are phased to not occur simultaneously, as to minimize any indirect effects associated with construction activities. The only vegetation that may be affected would be landscaped and mowed grass adjacent to a particular project. For all future projects, direct impacts would be limited to airport property and may contribute temporary, minor indirect effects to the surrounding parcels with respect to construction noise and/or air quality (due to construction equipment). However, the construction schedule of the Preferred Alternative would not overlap with any other planned projects at the Airport.

Cumulative impacts are not anticipated due to the implementation of the Preferred Alternative compared to the No Action Alternative, as the minor and temporary impacts associated with the vegetation removal would be limited to the direct impact areas, would not result in substantial or adverse effects to the human or natural environment, and would therefore not contribute to a cumulative effect with future projects.

3.5 Irreversible and Irretrievable Commitment of Resources

The Preferred Alternative would not increase the permanent worker population, put undue stress on local utilities or Airport assets, or adversely alter the natural, visual, social, or economic conditions of the surrounding area. Therefore, there would be no irreversible or irretrievable commitment of resources associated with the implementation of the Preferred Alternative.

3.6 Conclusion

There are no permanent, significant, adverse impacts on resources as a result of the Preferred Alternative when compared to the No Action Alternative. Therefore, no mitigation is required as part of this project. While the Preferred Alternative would not result in significant adverse impacts to any resources that require mitigation, best management practices would be observed during construction to avoid or minimize effects in the project area and its vicinity.

4 PUBLIC INVOLVEMENT AND AGENCY COORDINATION

4.1 Agency Coordination

Applicable correspondence is provided in the resource appendices. Agency coordination was initiated through letter correspondence with the following agencies:

- United States Army Corps of Engineers
- United States Department of Agriculture, Natural Resources Conservation Service
- United States Fish and Wildlife Service
- Tennessee Department of Environment and Conservation
- Tennessee Historical Commission
- Tennessee Natural Heritage Program
- Tennessee Wildlife Resources Agency

4.2 Public Outreach

The Tennessee Department of Transportation (TDOT) and MSCAA published a Notice of Availability of the EA providing the public an opportunity to review and comment on the project's environmental assessment. Notice was published in The Commercial Appeal, Daily News, Tri-State Defender-Memphis, LaPrensa Latina, and on the Airport's website www.flymemphis.com.

The EA will be available for review from September 7, 2022 through October 7, 2022. Following the public comment period on the EA, TDOT and MSCAA will consider public comments and provide responses to them as part of its statement of findings for the Project.

MSCAA will accept comments until the official comment period closes on October 7, 2022. Comments on this EA should be sent to the Director of Development, Attn: Mr. James Hay, 2491 Winchester Road, Suite 113, Memphis, TN 38116, or jhay@flymemphis.com. Any questions regarding this public notice can also be directed to Ms. Lori Morris at the address above or lmorris@flymemphis.com.

5 LIST OF PREPARERS

The consultants contracted to prepare this Environmental Assessment included the following:

AKRF, Inc.

Jennifer Hogan (Project Manager)

Jim Finegan (Socioeconomics, Visual Resources, Land Use)

Nathan Riddle (Historic Resources)

A. Michael Pappalardo (Archaeology)

Harris Miller Miller and Hanson (HMMH, Inc.)

Robert Mentzer (Air and Noise)

Philip DeVita, CCM (Air Quality)

Tara Cruz (Noise)

Vincent Ma (Air and Noise)

Jacobsen Daniels

Matt Johnson (Alternatives)

Kirkland R. Ellens (Alternatives)

Tioga Environmental Consultants

Larking Myers (Biological and Water Resources)

Ben Day (Biological and Water Resources)

William Gray (Biological and Water Resources)

Well Data Disclaimer:

These data should not be used as an endpoint for decision making purposes in instances such as spill response or the locating of a well in proximity to other features (e.g., property lines, septic systems, buildings etc.). All well locations should be field verified by the user before decisions are made.

There may be records in the State's water well database that do not contain reliable locational information, specifically with respect to the reported latitude and longitude. The database includes entries reported as far back as the 1920s and the accuracy of locational information depends on the type of instruments (e.g., topographic map, address, GPS, etc.) used to record/report the location as well as the diligence of the reporting entity. Some wells are located only to the quadrangle ninth. The user will notice these wells mapped in the southeast (lower right) corner of the corresponding quadrangle ninth polygon. It is suggested that the user review the data using the provided coordinates in conjunction with the location/address, and the well owner's name.

Municipal well locations are considered confidential under Tenn. Code Ann. § 10-7-504 (a)(21)(A) and Tenn. Comp. R. & Regs. 0400-01-01-.01(4)(c), so the location of those data have been redacted from the records provided. A request can be made for an evaluation of these features in an area of interest by e-mailing the Division of Water Resources at the address listed below. Once a request is made, we will provide information pertaining to the presence or absence of these features for an area of interest.

E-mail us at Richard.Rogers@TN.gov with questions regarding Tennessee Water Wells.

Get detailed information about this report, including column descriptions, at <https://www.epa.gov/outdoor-air-quality-data/about-air-data-reports#mon>

AirData reports are produced from a direct query of the AQS Data Mart. The data represent the best and most recent information available to EPA from state agencies. However, some values may be absent due to incomplete reporting, and some values may change due to quality assurance activities. The AQS database is updated by state, local, and tribal organizations who own and submit the data.

Readers are cautioned not to rank order geographic areas based on AirData reports. Air pollution levels measured at a particular monitoring site are not necessarily representative of the air quality for an entire county or urban area.

This report is based on monitor-level summary statistics. Air quality standards for some pollutants (PM2.5 and Pb) allow for combining data from multiple monitors into a site-level summary statistic that can be compared to the standard. In those cases, the site-level statistics may differ from the monitor-level statistics upon which this report is based.

ASSUMPTIONS

Emission factors were developed from the following models:

- On-Road Vehicles: MOVES3, version 3.0.3
- Non-Road Equipment: MOVES3, Version 3.0.3

The average employee travels 30 miles round-trip from home to construction site each day.

The average on-road material delivery round-trip distance per truck is 40 miles per day.

For calculating fugitive, re-entrained PM emissions from on-road and non-road material delivery and handling equipment, a nominal VMT of 5 miles is used for each vehicle per day.

In deriving emission factors from NONROAD, the horsepower for each equipment represents the most popular in each equipment category.

Only CO2, CH4, and N2O are used to represent greenhouse gas emissions. Other potential greenhouse gases including air conditioning refrigerants were not included.

The following equipment are always modeled using diesel emission factors since gasoline-based emission factors are not available:

- Asphalt Deliveries/Ten Wheelers
- Bulldozer

October 2022 to September 2024

Activity	Construction Duration	Notes
Phase 1: non-wetland clearing	25 days	20 acres at 1.5 acres per day to clear and 2 acres per day to grade and seed/cover
Phase 1: west side access road	0	No access from the west
Phase 1: east side access road	10 days	1 dozer and dump truck to stabilize the road (5 days) and 1 dozer to maintain (1 day per week for Phases 1 and 2)
Phase 2A: wetland tree cutting	35 days	Trees are proposed to be cut; however, stumps and tree roots would not be disturbed. Trees that fall outside the buffer zone will be removed or burned. 2 to 3 months depending on weather
Phase 2A: site work		
Phase 2B: buffer area tree topping	55 days	Trees would be topped, large trees material that falls into the buffer zones will be removed or burned. Trees material that falls into the stream will be removed, but left within the buffer zone.
Phase 2B: site work		
Truck Trips associated with offsite Tr	220 trips	Assumes 10 trips per cleared acres and 2 trips per wetland buffer area
Tree and vegetative material burning	90 days	Assumes 50 days to burn trees from the cleared area and 30 days to burn trees that fall outside the buffer zone

April 20, 2022

Project Code: 2022-0034005

Project Name: Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2) (c)). For projects other than major construction activities, the Service suggests that a biological

evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see <https://www.fws.gov/birds/policies-and-regulations.php>.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see <https://www.fws.gov/birds/bird-enthusiasts/threats-to-birds.php>.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit <https://www.fws.gov/birds/policies-and-regulations/executive-orders/e0-13186.php>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Tennessee Ecological Services Field Office

(931) 528-6481

Project Summary

Project Code: 2022-0034005
Event Code: None
Project Name: Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing
Project Type: Airport - Maintenance/Modification
Project Description: The Charles W. Baker Airport (2M8) is in Millington, Tennessee, which is a suburban area of the Memphis metropolitan area. Fite Road runs along the southern border of the Airport and Raleigh Millington Road is the major roadway to the east of the Airport. The entrance road to the Airport is from Fite Road. North of the airport is vegetated, undeveloped property, and to the west of the property is the Memphis International Raceway . The airport consists of one runway and associated taxiway, a terminal and office building, hangars, airport parking, fuel service, and surface parking for vehicles. Access to the airside area is through a restricted access gate.

The property north of Runway 18/36 is outside of the airport's property boundary and is comprised of vegetated and cleared, undeveloped land. There are wetlands and upland forest in this area, but with no habitat of concern. Some of the vegetated areas have trees that are tall enough to interfere with the Part 77 approach and transitional surfaces for Runway 18 (north end of Runway 18/36). These trees are defined as obstructions and can alter the way aircraft use that runway. Approximately 100 acres in this area include obstructions, which has been identified as the project area. The project area consists of property from six privately-owned parcels (with three different landowners).

The Proposed Action is to acquire the land on which these trees are located and then remove the tree obstructions to the approach surfaces within the alignment of Runway 18. These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. During that inspection, it was determined that these tree obstructions are causing federal and state Part 77 (20:1) approach surface violations.

MSCAA proposes to acquire the areas of land that contain the current tree obstructions and those trees that were identified to be future obstructions in the same area. Once the property is acquired, MSCAA would remove and/or selectively top trees from upland and wetland areas within the project area in three phases. The tree removal and tree topping activities would occur within approximately 81 acres of the site, consisting of uplands and wetland areas .

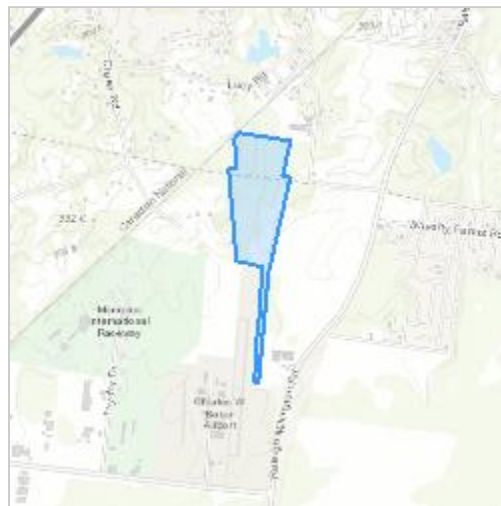

The project would occur over approximately two years, with the majority of the work to occur in 2023, and in three distinct areas. This work would

be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

Tree removal activities would require temporary staging within the project area and would be determined when the site work began. These areas would be in upland portions of the project area and would not contribute any additional impact to wetlands or water resources. Multiple haul roads would be developed to minimize the crossing of streams on-site, with one primary road from the west via the Airport's property and one from the east via S. Amherst Road. There is an unpaved road used for utility maintenance from S. Amherst Road that would be used to access the site. Any new haul roads required would be constructed in the uplands and only as necessary for access; some grading would occur as necessary. No disturbance related to haul road construction would be outside of the project area. After tree removal activities, the roads would be left in place.

Project Location:

Approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/@35.2906921,-89.93026740493777,14z>

Counties: Shelby County, Tennessee

Endangered Species Act Species

There is a total of 3 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

-
1. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Indiana Bat <i>Myotis sodalis</i> There is final critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat <i>Myotis septentrionalis</i> No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Insects

NAME	STATUS
Monarch Butterfly <i>Danaus plexippus</i> No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the [National Wildlife Refuge](#) system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act¹ and the Bald and Golden Eagle Protection Act².

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described [below](#).

-
1. The [Migratory Birds Treaty Act](#) of 1918.
 2. The [Bald and Golden Eagle Protection Act](#) of 1940.
 3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern](#) (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
American Kestrel <i>Falco sparverius paulus</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
Prothonotary Warbler <i>Protonotaria citrea</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Apr 1 to Jul 31

Probability Of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is $0.25/0.25 = 1$; at week 20 it is $0.05/0.25 = 0.2$.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)

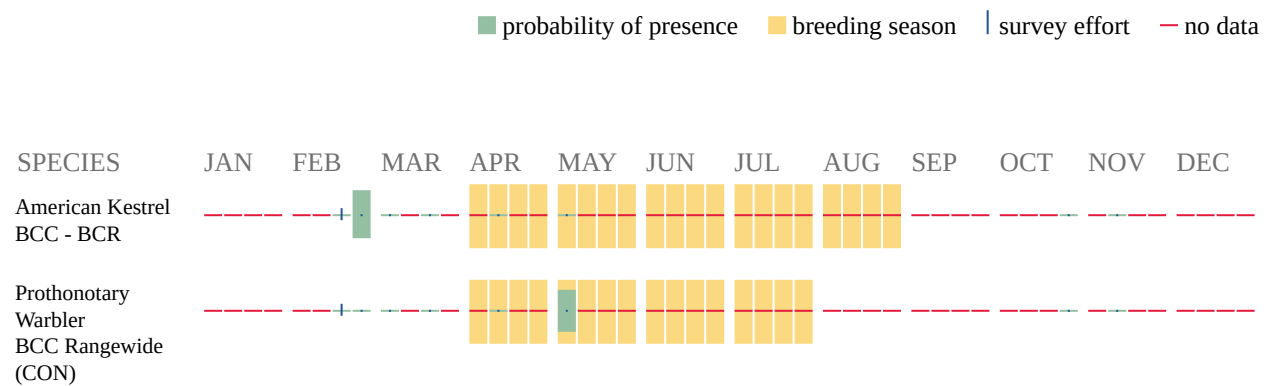

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (-)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Additional information can be found using the following links:

- Birds of Conservation Concern <https://www.fws.gov/program/migratory-birds/species>
- Measures for avoiding and minimizing impacts to birds <https://www.fws.gov/library/collections/avoiding-and-minimizing-incident-take-migratory-birds>
- Nationwide conservation measures for birds <https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf>

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as

warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [AKN Phenology Tool](#).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: [The Cornell Lab of Ornithology All About Birds Bird Guide](#), or (if you are unsuccessful in locating the bird of interest there), the [Cornell Lab of Ornithology Neotropical Birds guide](#). If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT [HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML](https://www.fws.gov/wetlands/data/mapper.html) OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Lead Agency: Federal Aviation Administration

Endangered Species Act Review

EVALUATING: INDIANA BAT DETERMINATION KEY

Qualification interview

The following questions will determine whether this key applies to your project and provide guidance to help you make appropriate determinations for the species covered by this key.

1. Will the proposed action involve Federal funding, permitting, or authorization, or will it be carried out by a Federal Agency? 1.1

Yes

2. Is the Federal Highway Administration (FHWA), Federal Railroad Administration (FRA), or Federal Transit Administration (FTA) the lead Federal Agency for this action. 1.2

No

3. Are you the lead Federal Action Agency or designated non-federal representative requesting concurrence on behalf of the lead Federal Action Agency? 1.4

Yes

4. [Semantic] Is the Action Area within 1/2-mile of a known Indiana bat hibernaculum? 1.7

Note: The map queried for this question contains proprietary information and cannot be displayed. If you need additional information, please contact the Field Office listed in the letterhead of this letter.

Automatically answered

No

5. If you have determined that the Indiana bat is unlikely to occur to within your project's Action Area (Pursuant to 50 CFR §402.02, the Action Area includes all areas to be affected directly or indirectly by the Federal action and not merely the immediate area involved in the action. Moreover, the Effects of the Action are all 1.7.1

consequences to listed species or critical habitat that are caused by the proposed action, including the consequences of other activities that are caused by the proposed action. A consequence is caused by the proposed action if it would not occur but for the proposed action and it is reasonably certain to occur. Effects of the action may occur later in time and may include consequences occurring outside the immediate area involved in the action (see also 50 CFR §402.17.) or that your project is unlikely to have any potential impacts on the Indiana bat, you may wish to make a "No Effect" determination for the Indiana bat. Would you like to make a No Effect determination for the Indiana bat?

Note: A "No Effect" determination does not require concurrence from the Service; however, you should document the supporting information for this determination in your files. This documentation would typically demonstrate a lack of suitable habitat within the action area, show that no impacts to suitable habitat would occur, or provide information that the species is not reasonably certain to occur in the action area even though suitable habitat is present. If you believe the Indiana bat may be affected by your project or if you would like assistance in making a determination, please answer "no" and continue through the key.

Yes

EVALUATION PROGRESS

When the action agency determines its proposed action will not affect a listed species, there is no need to coordinate further with the Service. If the Indiana bat will not be exposed directly or indirectly to the proposed action or any resulting environmental changes, an agency should conclude "no effect" and document the finding and this completes the section 7 process. For example, if suitable habitat is not present in the action area and the project does not otherwise present a risk to the species, conclude "species not present" and document your finding.

In Reply Refer To:

April 21, 2022

Project code: 2022-0034005

Project Name: Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing

Subject: Verification letter for the 'Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing' project under the January 5, 2016, Programmatic Biological Opinion on Final 4(d) Rule for the Northern Long-eared Bat and Activities Excepted from Take Prohibitions.

Dear Ben Day:

The U.S. Fish and Wildlife Service (Service) received on April 21, 2022 your effects determination for the 'Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing' (the Action) using the northern long-eared bat (*Myotis septentrionalis*) key within the Information for Planning and Consultation (IPaC) system. This IPaC key assists users in determining whether a Federal action is consistent with the activities analyzed in the Service's January 5, 2016, Programmatic Biological Opinion (PBO). The PBO addresses activities excepted from "take"^[1] prohibitions applicable to the northern long-eared bat under the Endangered Species Act of 1973 (ESA) (87 Stat.884, as amended; 16 U.S.C. 1531 et seq.).

Based upon your IPaC submission, the Action is consistent with activities analyzed in the PBO. The Action may affect the northern long-eared bat; however, any take that may occur as a result of the Action is not prohibited under the ESA Section 4(d) rule adopted for this species at 50 CFR §17.40(o). Unless the Service advises you within 30 days of the date of this letter that your IPaC-assisted determination was incorrect, this letter verifies that the PBO satisfies and concludes your responsibilities for this Action under ESA Section 7(a)(2) with respect to the northern long-eared bat.

Please report to our office any changes to the information about the Action that you submitted in IPaC, the results of any bat surveys conducted in the Action area, and any dead, injured, or sick northern long-eared bats that are found during Action implementation. If the Action is not completed within one year of the date of this letter, you must update and resubmit the information required in the IPaC key.

This IPaC-assisted determination allows you to rely on the PBO for compliance with ESA Section 7(a)(2) only for the northern long-eared bat. It **does not** apply to the following ESA-protected species that also may occur in the Action area:

- Indiana Bat *Myotis sodalis* Endangered
- Monarch Butterfly *Danaus plexippus* Candidate

If the Action may affect other federally listed species besides the northern long-eared bat, a proposed species, and/or designated critical habitat, additional consultation between you and this Service office is required. If the Action may disturb bald or golden eagles, additional coordination with the Service under the Bald and Golden Eagle Protection Act is recommended.

[1]Take means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct [ESA Section 3(19)].

Action Description

You provided to IPaC the following name and description for the subject Action.

1. Name

Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing

2. Description

The following description was provided for the project 'Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing':

The Charles W. Baker Airport (2M8) is in Millington, Tennessee, which is a suburban area of the Memphis metropolitan area. Fite Road runs along the southern border of the Airport and Raleigh Millington Road is the major roadway to the east of the Airport. The entrance road to the Airport is from Fite Road. North of the airport is vegetated, undeveloped property, and to the west of the property is the Memphis International Raceway . The airport consists of one runway and associated taxiway, a terminal and office building, hangars, airport parking, fuel service, and surface parking for vehicles. Access to the airside area is through a restricted access gate.

The property north of Runway 18/36 is outside of the airport's property boundary and is comprised of vegetated and cleared, undeveloped land. There are wetlands and upland forest in this area, but with no habitat of concern. Some of the vegetated areas have trees that are tall enough to interfere with the Part 77 approach and transitional surfaces for Runway 18 (north end of Runway 18/36). These trees are defined as obstructions and can alter the way aircraft use that runway. Approximately 100 acres in this area include obstructions, which has been identified as the project area. The project area consists of property from six privately-owned parcels (with three different landowners).

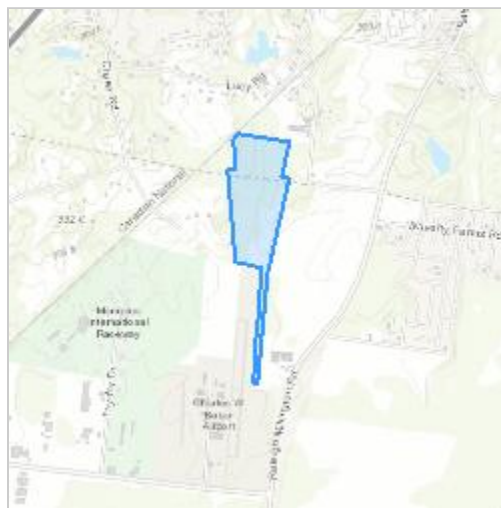

The Proposed Action is to acquire the land on which these trees are located and then remove the tree obstructions to the approach surfaces within the alignment of Runway 18. These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. During that inspection, it was determined that these tree obstructions are causing federal and state Part 77 (20:1) approach surface violations.

MSCAA proposes to acquire the areas of land that contain the current tree obstructions and those trees that were identified to be future obstructions in the same area. Once the property is acquired, MSCAA would remove and/or selectively top trees from upland and wetland areas within the project area in three phases. The tree removal and tree topping activities would occur within approximately 81 acres of the site, consisting of uplands and wetland areas .

The project would occur over approximately two years, with the majority of the work to occur in 2023, and in three distinct areas. This work would be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

Tree removal activities would require temporary staging within the project area and would be determined when the site work began. These areas would be in upland portions of the project area and would not contribute any additional impact to wetlands or water resources. Multiple haul roads would be developed to minimize the crossing of streams on-site, with one primary road from the west via the Airport's property and one from the east via S. Amherst Road. There is an unpaved road used for utility maintenance from S. Amherst Road that would be used to access the site. Any new haul roads required would be constructed in the uplands and only as necessary for access; some grading would occur as necessary. No disturbance related to haul road construction would be outside of the project area. After tree removal activities, the roads would be left in place.

Approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/@35.2906921,-89.93026740493777,14z>

Determination Key Result

This Federal Action may affect the northern long-eared bat in a manner consistent with the description of activities addressed by the Service's PBO dated January 5, 2016. Any taking that may occur incidental to this Action is not prohibited under the final 4(d) rule at 50 CFR §17.40(o). Therefore, the PBO satisfies your responsibilities for this Action under ESA Section 7(a)(2) relative to the northern long-eared bat.

Determination Key Description: Northern Long-eared Bat 4(d) Rule

This key was last updated in IPaC on May 15, 2017. Keys are subject to periodic revision.

This key is intended for actions that may affect the threatened northern long-eared bat.

The purpose of the key for Federal actions is to assist determinations as to whether proposed actions are consistent with those analyzed in the Service's PBO dated January 5, 2016.

Federal actions that may cause prohibited take of northern long-eared bats, affect ESA-listed species other than the northern long-eared bat, or affect any designated critical habitat, require ESA Section 7(a)(2) consultation in addition to the use of this key. Federal actions that may affect species proposed for listing or critical habitat proposed for designation may require a conference under ESA Section 7(a)(4).

Determination Key Result

This project may affect the threatened Northern long-eared bat; therefore, consultation with the Service pursuant to Section 7(a)(2) of the Endangered Species Act of 1973 (87 Stat.884, as amended; 16 U.S.C. 1531 et seq.) is required. However, based on the information you provided, this project may rely on the Service's January 5, 2016, *Programmatic Biological Opinion on Final 4(d) Rule for the Northern Long-Eared Bat and Activities Excepted from Take Prohibitions* to fulfill its Section 7(a)(2) consultation obligation.

Qualification Interview

1. Is the action authorized, funded, or being carried out by a Federal agency?
Yes
2. Have you determined that the proposed action will have "no effect" on the northern long-eared bat? (If you are unsure select "No")
No
3. Will your activity purposefully **Take** northern long-eared bats?
No
4. [Semantic] Is the project action area located wholly outside the White-nose Syndrome Zone?
Automatically answered
No
5. Have you contacted the appropriate agency to determine if your project is near a known hibernaculum or maternity roost tree?

Location information for northern long-eared bat hibernacula is generally kept in state Natural Heritage Inventory databases – the availability of this data varies state-by-state. Many states provide online access to their data, either directly by providing maps or by providing the opportunity to make a data request. In some cases, to protect those resources, access to the information may be limited. A web page with links to state Natural Heritage Inventory databases and other sources of information on the locations of northern long-eared bat roost trees and hibernacula is available at www.fws.gov/midwest/endangered/mammals/nleb/nhisites.html.

Yes

6. Will the action affect a cave or mine where northern long-eared bats are known to hibernate (i.e., hibernaculum) or could it alter the entrance or the environment (physical or other alteration) of a hibernaculum?
No
 7. Will the action involve Tree Removal?
Yes
-

8. Will the action only remove hazardous trees for the protection of human life or property?

No

9. Will the action remove trees within 0.25 miles of a known northern long-eared bat hibernaculum at any time of year?

No

10. Will the action remove a known occupied northern long-eared bat maternity roost tree or any trees within 150 feet of a known occupied maternity roost tree from June 1 through July 31?

No

Project Questionnaire

If the project includes forest conversion, report the appropriate acreages below. Otherwise, type '0' in questions 1-3.

1. Estimated total acres of forest conversion:

20

2. If known, estimated acres of forest conversion from April 1 to October 31

0

3. If known, estimated acres of forest conversion from June 1 to July 31

0

If the project includes timber harvest, report the appropriate acreages below. Otherwise, type '0' in questions 4-6.

4. Estimated total acres of timber harvest

0

5. If known, estimated acres of timber harvest from April 1 to October 31

0

6. If known, estimated acres of timber harvest from June 1 to July 31

0

If the project includes prescribed fire, report the appropriate acreages below. Otherwise, type '0' in questions 7-9.

7. Estimated total acres of prescribed fire

0

8. If known, estimated acres of prescribed fire from April 1 to October 31

0

9. If known, estimated acres of prescribed fire from June 1 to July 31

0

If the project includes new wind turbines, report the megawatts of wind capacity below. Otherwise, type '0' in question 10.

10. What is the estimated wind capacity (in megawatts) of the new turbine(s)?

0

RESOURCE AGENCY CORRESPONDENCE

April 22, 2022

Tennessee Department of Environment and Conservation
Attn: Ms. Joellyn Brazile, Water Resources Manager
Memphis Environmental Field Office
8383 Wolf Lake Drive
Bartlett, TN 38133

Re: Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing
Memphis-Shelby County Airport Authority
Millington, Shelby County, Tennessee

Dear Ms. Brazille,

The Memphis-Shelby County Airport Authority (MSCAA) is proposing to remove or top obstructions (trees) within an approximate 100-acre tract located east and north of the Charles W. Baker Airport in Millington, Shelby County, TN. The project is proposed in order to comply with Federal Aviation Administration (FAA) grant assurance #20 (hazard removal and mitigation), and airspace safety (glide slope) requirements for aircraft take-offs and landings. Select wooded areas within the project area represent an airspace obstruction under Federal Aviation Regulation (FAR) Section 77.23 - Standards for Determining Obstructions. A more detailed project description, mapping, and photographic log of the project area is attached.

Tioga, on behalf of the MSCAA, is preparing the necessary environmental documentation for FAA's review. The TDEC-MEFO is invited to comment on the proposed project and will have an opportunity to review and comment on a forthcoming Environmental Assessment, addressing how the proposed project would potentially impact economic, social, and environmental resources.

Should you have any comments or questions regarding the proposed action, please contact me via email at bday@tiogaenv.com or by phone at (901) 791-2432.

Sincerely,
TIOGA ENVIRONMENTAL CONSULTANTS, INC.

A handwritten signature in blue ink that reads "Ben S. Day".

Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing

Project Setting and Proposed Action

The Charles W. Baker Airport (2M8) is in Millington, Tennessee, which is a suburban area of the Memphis metropolitan area. Fite Road runs along the southern border of the Airport and Raleigh Millington Road is the major roadway to the east of the Airport. The entrance road to the Airport is from Fite Road. North of the airport is vegetated, undeveloped property, and to the west of the property is the Memphis International Raceway (**Figure 2**). The airport consists of one runway and associated taxiway, a terminal and office building, hangars, airport parking, fuel service, and surface parking for vehicles. Access to the airside area is through a restricted access gate.

The property north of Runway 18/36 is outside of the airport's property boundary and is comprised of vegetated and cleared, undeveloped land. There are wetlands and upland forest in this area, but with no habitat of concern. Some of the vegetated areas have trees that are tall enough to interfere with the Part 77 approach and transitional surfaces for Runway 18 (north end of Runway 18/36). These trees are defined as obstructions and can alter the way aircraft use that runway. Approximately 100 acres in this area include obstructions, which has been identified as the project area. The project area consists of property from six privately-owned parcels (with three different landowners).

The Proposed Action is to acquire the land on which these trees are located and then remove the tree obstructions to the approach surfaces within the alignment of Runway 18. These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. During that inspection, it was determined that these tree obstructions are causing federal and state Part 77 (20:1) approach surface violations.

MSCAA proposes to acquire the areas of land that contain the current tree obstructions and those trees that were identified to be future obstructions in the same area. Once the property is acquired, MSCAA would remove and/or selectively top trees from upland and wetland areas within the project area (**Figure 2**) in three phases. The tree removal and tree topping activities would occur within approximately 81 acres of the site, consisting of uplands and wetland areas (**Figure 3**).

The project would occur over approximately two years, with the majority of the work to occur in 2023, and in three distinct areas, described by phase (**Figure 4**):

- Phase I - MSCAA would acquire the land delineated as the project area, which is approximately 100 acres in size. Within the Phase I portion of the project area, approximately 20 acres of the upland areas would be cleared, graded, and stabilized in the southern portion of the project area. This includes removing trees, stumps and roots, and debris (shrubs, bushes, etc.) identified as obstructions. Tree removal activities, and subsequent grading activities, would be conducted incrementally, in sections in accordance with Tennessee Department of Environment and Conservation (TDEC) construction stormwater permitting requirements. Fallen trees would be proposed for reuse as harvested timber. If some trees could not be used for timber, those would be burned on-site using Air Curtain Destructor (ACD) burn processes that would include the use of several burn pits with burn waste remaining as on-site fill at the location of the ACD, in consideration of Shelby County Health Department regulations regarding smoke and particulate matter.

- Phase II - Within the Phase II portion of the project area, approximately 20 acres of wetland area and 13 acres of upland designated as buffer zones (the area of a 30-foot buffer around those wetlands and 60-foot buffer area around the streams in the Phase II area), tree cutting (to the stump) and topping would be selective and no clear cutting would occur.

This work would be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

Within the 60-foot buffer zone around the streams, as well as where streams and wetlands overlap, trees would only be topped to comply with FAA glide slope regulations. The topping would be completed by hand using chain saws. The tree topping height would vary based on elevation and distance from runway end. Tree canopies would be maintained to the greatest extent possible to maintain the natural temperature and biology of the stream, as required by TDEC. Fallen trees would be removed by hand and placed within the buffer zone. Trees that fall into streams or that fall outside the buffer zone would be removed for offsite transport or using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

- Phase III – Only upland and stream buffer areas are present in the Phase III portion of the project (no wetlands occur in Phase III). The tree cutting in Phase III would occur after the first two phases. Approximately 25 acres of upland and 3 acres of stream buffer zones would be cut in the same methods as previously described in Phases I and II.

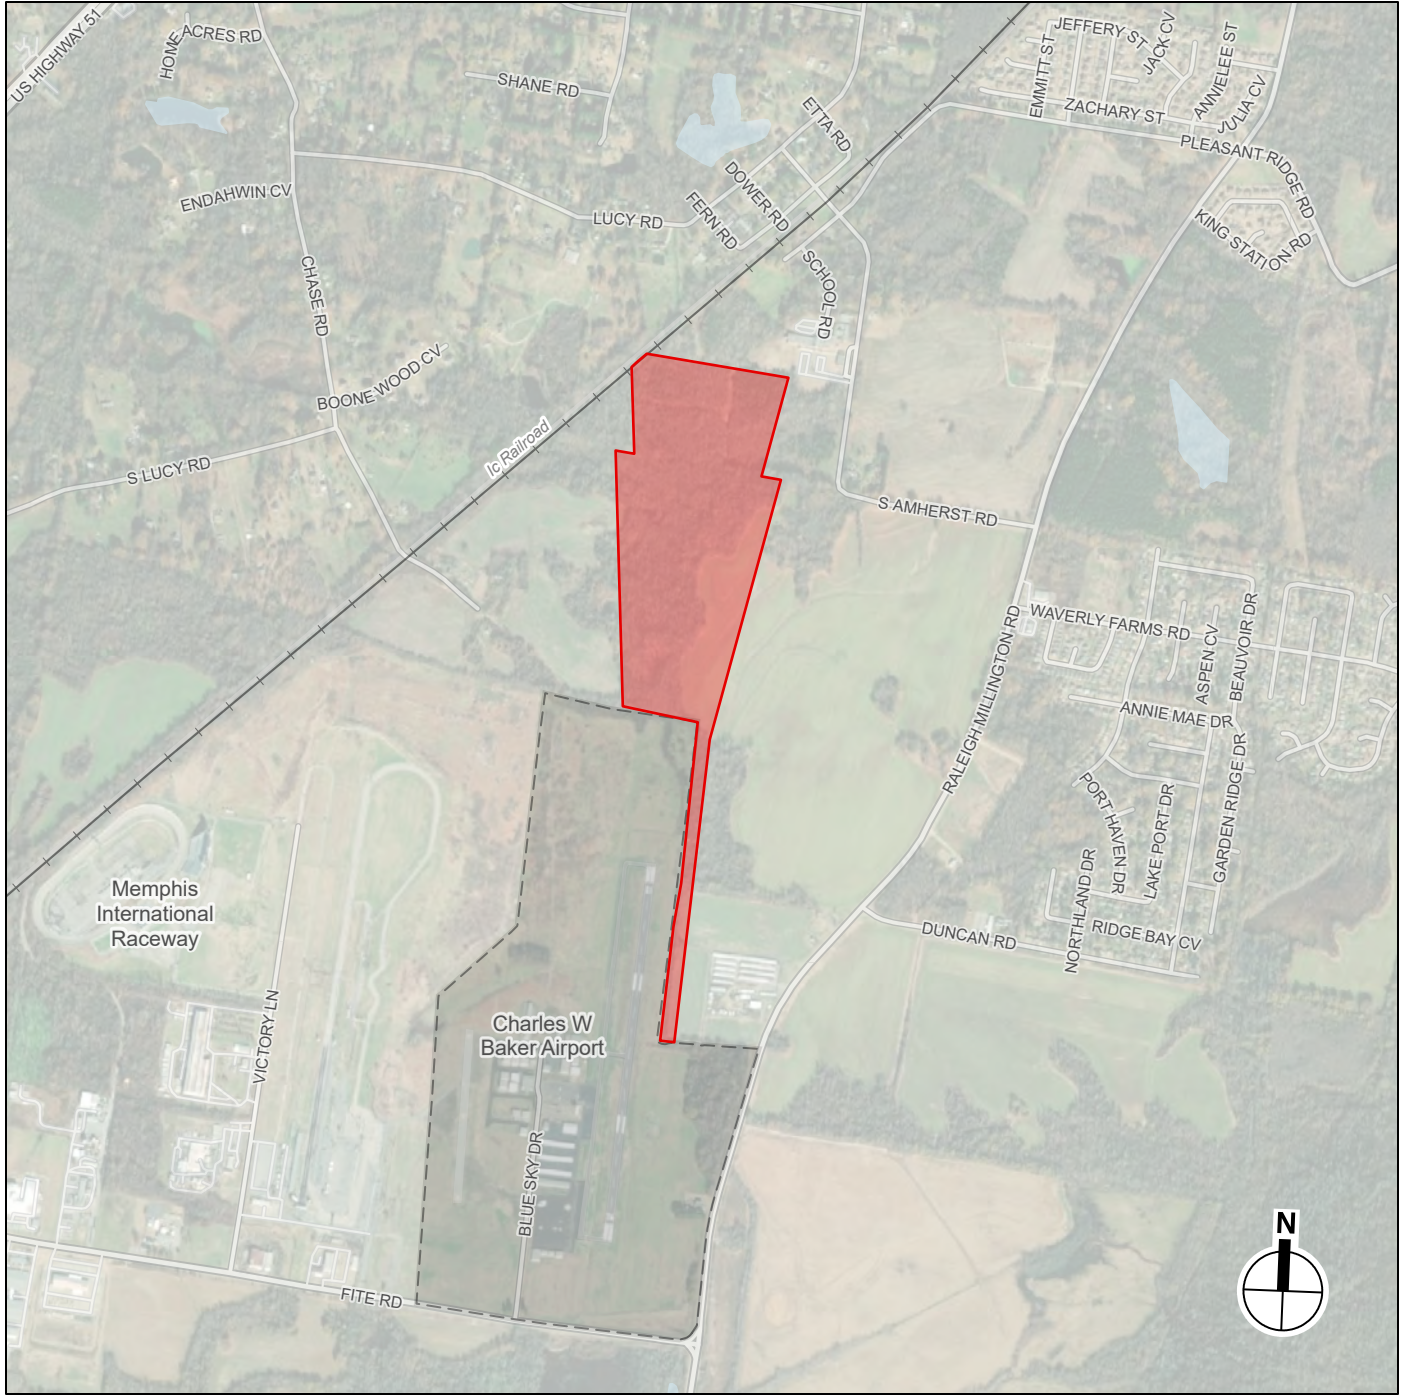

Tree removal activities would require temporary staging within the project area and would be determined when the site work began. These areas would be in upland portions of the project area and would not contribute any additional impact to wetlands or water resources. Multiple haul roads would be developed to minimize the crossing of streams on-site, with one primary road from the west via the Airport’s property and one from the east via S. Amherst Road. There is an unpaved road used for utility maintenance from S. Amherst Road that would be used to access the site. Any new haul roads required would be constructed in the uplands and only as necessary for access; some grading would occur as necessary. No disturbance related to haul road construction would be outside of the project area. After tree removal activities, the roads would be left in place.

Table 1-1 summarizes the acreage of cutting by phase and method.

Table 1-1 Proposed Activities, by Acreage and Phase

	Clear Cut (Upland Area)	Selective Cut (Wetlands and Buffer)
Phase I & Phase II	20 acres upland	20 acres wetland 13 acres of buffer
Phase III	25 acres upland	3 acres buffer
Total	45 acres	36 acres

Re: Hydrologic Determination QHP2205.013
 Charles Baker Airport
 Millington, Shelby County, Tennessee

Dear Mr. Day,

The Division of Water Resources has reviewed the documentation prepared by you seeking concurrence with the report that was submitted in support of the Hydrologic Determination and Wetland Delineation conducted for the above referenced location in Shelby County, TN.

The channel identified as the "STR-1" is a stream beginning at (35.29649, -89.93018) and ending at (35.27935, -89.93018) as indicated in the Hydrologic Determination Report.

The channel identified as the "STR-2" is a stream beginning at (35.28801, -89.93206) and ending at (35.28756, -89.93059) as indicated in the Hydrologic Determination Report.

The channel identified as "EPH-1 A-D" is a wet weather conveyance beginning approximately at (35.28985, -89.92980) and ending at (35.28992, -89.93023) as indicated in the Hydrologic Determination Report.

The channel identified as "EPH-2" is a wet weather conveyance beginning at (35.29633, -89.92931) and ending at (35.29444, -89.93017) as indicated in the Hydrologic Determination Report.

The channel identified as “EPH-3” is a wet weather conveyance beginning at (35.29639, -89.92992) and ending at (35.29608, -89.93008) as indicated in the Hydrologic Determination Report.

The water body identified as “WTL-1” located approximately at (35.28852, -89.93139) is a 21.5-acre wetland.

The water body identified as “WTL-2” located approximately at (35.28639, -89.92952) is a 3.38-acre wetland.

The water body identified as “WTL-3” located approximately at (35.29410, -89.93244) is a 302 foot, 0.07-acre linear wetland.

The water body identified as “WTL-4” located approximately at (35.29380, -89.93243) is a 158 foot, 0.036-acre linear wetland.

Any alterations to designated streams or wetlands may only be performed under the coverage of, and conformance to, a valid Aquatic Resource Alteration Permit (ARAP) issued by the Tennessee Division of Water Resources. Any alterations to wet weather conveyances must be made in accordance with the requirements of Tenn. Code Ann. § 69 -3- 108(q). The ARAP information, along with a permit application and the terms of the permit may be obtained at the following webpage: [Aquatic Resource Alteration Permit \(ARAP\) \(tn.gov\)](http://www.tn.gov/aquatic-resource-alteration-permit).

Please be aware that hydrologic determinations are advised and governed by Tennessee Department of Environment and Conservation (TDEC) rules and regulations and therefore only apply to the State’s permitting process. Water features located onsite may also be considered jurisdictional Waters of the United States; therefore, alterations to them should only be performed after consultation with the U.S. Army Corps of Engineers (USACE).

If you have any questions, please contact Mrs. Ginna McWhirter at 901-426-6691 or by E-mail at Ginna.McWhirter@tn.gov.

Sincerely,

Ginna McWhirter

Hi Ben,

To the best of my understanding of the project, the proposed selective tree topping and cutting within the streams and wetlands may be conducted without obtaining an ARAP, as long as the provisions you have indicated below are followed.

Subject: [EXTERNAL] Project Review for MSCAA Charles W. Baker Airport Tree Clearing

***** This is an EXTERNAL email. Please exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email - STS-Security. *****

Heather,

I believe that you reviewed this project back in 2018 for David Hilgeman while he was still at Ensafe (I've attached an email from the records I have). Since that time the project area has expanded to include approximately 100 acres, but there have not been changes to the planned methodology and we are still planning on maintaining all the necessary buffers on streams and wetlands, with no mechanized cutting or clearing in these areas, and will still plan on obtaining a CGP for the disturbances >1 acre.

We're in the process of putting together the actual EA for submittal to FAA for project approval. Would you mind giving this another review and response?

Let me know if you need anything else on this.

Thanks,
Ben

Subject: Charles W. Baker Airport Land Acquisition and Tree Obstruction Clearing
(35.29278° -89.93030°)
Shelby County, TN
Rare Species Database Review

Dear Mr. Day:

Thank you for your correspondence of 21 April 2022 requesting a rare species database review for the proposed land acquisition and clearing or tree height management of approximately 100 acres in Shelby County, Tennessee.

Per your submittal:

... The property north of Runway 18/36 is outside of the airport's property boundary and is comprised of vegetated and cleared, undeveloped land. There are wetlands and upland forest in this area.... Some of the vegetated areas have trees that are tall enough to interfere with the Part 77 approach and transitional surfaces for Runway 18 (north end of Runway 18/36). These trees are defined as obstructions and can alter the way aircraft use that runway. Approximately 100 acres in this area include obstructions, which has been identified as the project area. The project area consists of property from six privately-owned parcels (with three different landowners).

The Proposed Action is to acquire the land on which these trees are located and then remove the tree obstructions to the approach surfaces within the alignment of Runway 18. These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. During that inspection, it was determined that these tree obstructions are causing federal and state Part 77 (20:1) approach surface violations.

MSCAA proposes to acquire the areas of land that contain the current tree obstructions and those trees that were identified to be future obstructions in the same area. Once the property is acquired, MSCAA

would remove and/or selectively top trees from upland and wetland areas within the project area... in three phases. The tree removal and tree topping activities would occur within approximately 81 acres of the site, consisting of uplands and wetland areas...

The project would occur over approximately two years, with the majority of the work to occur in 2023, and in three distinct areas, described by phase... :

- *Phase I - MSCAA would acquire the land delineated as the project area, which is approximately 100 acres in size. Within the Phase I portion of the project area, approximately 20 acres of the upland areas would be cleared, graded, and stabilized in the southern portion of the project area. This includes removing trees, stumps and roots, and debris (shrubs, bushes, etc.) identified as obstructions. Tree removal activities, and subsequent grading activities, would be conducted incrementally, in sections in accordance with Tennessee Department of Environment and Conservation (TDEC) construction stormwater permitting requirements. Fallen trees would be proposed for reuse as harvested timber. If some trees could not be used for timber, those would be burned on-site using Air Curtain Destructor (ACD) burn processes that would include the use of several burn pits with burn waste remaining as on-site fill at the location of the ACD, in consideration of Shelby County Health Department regulations regarding smoke and particulate matter.*

- *Phase II - Within the Phase II portion of the project area, approximately 20 acres of wetland area and 13 acres of upland designated as buffer zones (the area of a 30-foot buffer around those wetlands and 60-foot buffer area around the streams in the Phase II area), tree cutting (to the stump) and topping would be selective and no clear cutting would occur. This work would be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used. Within the 60-foot buffer zone around the streams, as well as where streams and wetlands overlap, trees would only be topped to comply with FAA glide slope regulations. The topping would be completed by hand using chain saws. The tree topping height would vary based on elevation and distance from runway end. Tree canopies would be maintained to the greatest extent possible to maintain the natural temperature and biology of the stream, as required by TDEC. Fallen trees would be removed by hand and placed within the buffer zone. Trees that fall into streams or that fall outside the buffer zone would be removed for offsite transport or using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.*

- *Phase III – Only upland and stream buffer areas are present in the Phase III portion of the project (no wetlands occur in Phase III). The tree cutting in Phase III would occur after the first two phases. Approximately 25 acres of upland and 3 acres of stream buffer zones would be cut in the same methods as previously described in Phases I and II.*

Tree removal activities would require temporary staging within the project area and would be determined when the site work began. These areas would be in upland portions of the project area and would not contribute any additional impact to wetlands or water resources. Multiple haul roads would be developed to minimize the crossing of streams on-site, with one primary road from the west via the Airport's property and one from the east via S. Amherst Road. There is an unpaved road used for utility maintenance from S. Amherst Road that would be used to access the site. Any new haul roads required would be constructed in the uplands and only as necessary for access; some grading would occur as

necessary. No disturbance related to haul road construction would be outside of the project area. After tree removal activities, the roads would be left in place.

We have reviewed the state’s natural heritage database with regard to the project boundaries, and we find that the following rare species has been observed previously within one mile of the project area:

Type	Scientific Name	Common Name	Global Rank	St. Rank	Fed. Prot.	St. Prot.	Habitat
Vertebrate Animal	<i>Limnothlypis swainsonii</i>	Swainson's Warbler	G4	S3	--	D	Mature, rich, damp, deciduous floodplain and swamp forests.

Within four miles of the project area the following additional rare species have been reported:

Type	Scientific Name	Common Name	Global Rank	St. Rank	Fed. Prot.	St. Prot.	Habitat
Vascular Plant	<i>Symphyotrichum praealtum</i>	Willow Aster	G5	S1	--	E	Moist Prairies and Marshes
Vertebrate Animal	<i>Acris gryllus</i>	Southern Cricket Frog	G5	S2S3	--	Rare, Not State Listed	Grassy margins of swamps, marshes, lakes, ponds, streams, ditches, and nearby temporary pools; far SW Tennessee.

The Division of Natural Areas - Natural Heritage Program has reviewed the location of the proposed project workspace with respect to rare plant species. Based on the habitat within the project area and the plan to use mechanical clearing (rather than herbicide), we do not anticipate any impacts to occurrences of rare, threatened, or endangered plant species from this project.

Please note that *Limnothlypis swainsonii* has been observed in the forested area of Parcel No. D0136 000.56 that will be impacted by the project and that *Acris gryllus* is known from sites less than 4 miles southeast and southwest of the project area. We ask that you coordinate this project with the Tennessee Wildlife Resources Agency (Region 1, Allen Pyburn, 731-423-6541, allen.pyburn@tn.gov) to ensure that legal requirements for protection of state listed rare animals are addressed. Additionally, we ask that you contact the U.S. Fish and Wildlife Service Field Office, Cookeville, Tennessee (931-525-4970) for comments regarding federally listed species. Please ensure that best management practices to address erosion and sediment are implemented and maintained during construction activities. Note that the [General Aquatic Resource Alteration Permit](#) states that “use of monofilament-type erosion control netting or blanket is prohibited in the stream channel, stream banks, or any disturbed riparian areas within 30 feet of top of bank.” Where necessary and feasible, we encourage use of biodegradable netting under the CGP (Construction General Stormwater Permit) as well.

Thank you for considering Tennessee’s rare species throughout the planning of this project. Should you have any questions, please do not hesitate to contact me at 615-532-4799 or dillon.blankenship@tn.gov.

Sincerely,

Dillon

Re: Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing
Memphis-Shelby County Airport Authority
Millington, Shelby County, Tennessee

Dear Mr. Pyburn,

The Memphis-Shelby County Airport Authority (MSCAA) is proposing to remove or top obstructions (trees) within an approximate 100-acre tract located east and north of the Charles W. Baker Airport in Millington, Shelby County, TN. The project is proposed in order to comply with Federal Aviation Administration (FAA) grant assurance #20 (hazard removal and mitigation), and airspace safety (glide slope) requirements for aircraft take-offs and landings. Select wooded areas within the project area represent an airspace obstruction under Federal Aviation Regulation (FAR) Section 77.23 - Standards for Determining Obstructions. A more detailed project description, mapping, and photographic log of the project area is attached.

Tioga, on behalf of the MSCAA, is preparing the necessary environmental documentation for FAA's review. The TWRA is invited to comment on the proposed project and will have an opportunity to review and comment on a forthcoming Environmental Assessment, addressing how the proposed project would potentially impact economic, social, and environmental resources. We are also soliciting comments from the Tennessee Natural Heritage Program and the USFWS Tennessee Ecological Services Field Office.

Should you have any comments or questions regarding the proposed action, please contact me via email at bday@tiogaenv.com or by phone at (901) 791-2432.

Sincerely,
TIOGA ENVIRONMENTAL CONSULTANTS, INC.

Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing

Project Setting and Proposed Action

The Charles W. Baker Airport (2M8) is in Millington, Tennessee, which is a suburban area of the Memphis metropolitan area. Fite Road runs along the southern border of the Airport and Raleigh Millington Road is the major roadway to the east of the Airport. The entrance road to the Airport is from Fite Road. North of the airport is vegetated, undeveloped property, and to the west of the property is the Memphis International Raceway (**Figure 2**). The airport consists of one runway and associated taxiway, a terminal and office building, hangars, airport parking, fuel service, and surface parking for vehicles. Access to the airside area is through a restricted access gate.

The property north of Runway 18/36 is outside of the airport's property boundary and is comprised of vegetated and cleared, undeveloped land. There are wetlands and upland forest in this area, but with no habitat of concern. Some of the vegetated areas have trees that are tall enough to interfere with the Part 77 approach and transitional surfaces for Runway 18 (north end of Runway 18/36). These trees are defined as obstructions and can alter the way aircraft use that runway. Approximately 100 acres in this area include obstructions, which has been identified as the project area. The project area consists of property from six privately-owned parcels (with three different landowners).

The Proposed Action is to acquire the land on which these trees are located and then remove the tree obstructions to the approach surfaces within the alignment of Runway 18. These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. During that inspection, it was determined that these tree obstructions are causing federal and state Part 77 (20:1) approach surface violations.

MSCAA proposes to acquire the areas of land that contain the current tree obstructions and those trees that were identified to be future obstructions in the same area. Once the property is acquired, MSCAA would remove and/or selectively top trees from upland and wetland areas within the project area (**Figure 2**) in three phases. The tree removal and tree topping activities would occur within approximately 81 acres of the site, consisting of uplands and wetland areas (**Figure 3**).

The project would occur over approximately two years, with the majority of the work to occur in 2023, and in three distinct areas, described by phase (**Figure 4**):

- Phase I - MSCAA would acquire the land delineated as the project area, which is approximately 100 acres in size. Within the Phase I portion of the project area, approximately 20 acres of the upland areas would be cleared, graded, and stabilized in the southern portion of the project area. This includes removing trees, stumps and roots, and debris (shrubs, bushes, etc.) identified as obstructions. Tree removal activities, and subsequent grading activities, would be conducted incrementally, in sections in accordance with Tennessee Department of Environment and Conservation (TDEC) construction stormwater permitting requirements. Fallen trees would be proposed for reuse as harvested timber. If some trees could not be used for timber, those would be burned on-site using Air Curtain Destructor (ACD) burn processes that would include the use of several burn pits with burn waste remaining as on-site fill at the location of the ACD, in consideration of Shelby County Health Department regulations regarding smoke and particulate matter.

- Phase II - Within the Phase II portion of the project area, approximately 20 acres of wetland area and 13 acres of upland designated as buffer zones (the area of a 30-foot buffer around those wetlands and 60-foot buffer area around the streams in the Phase II area), tree cutting (to the stump) and topping would be selective and no clear cutting would occur.

This work would be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

Within the 60-foot buffer zone around the streams, as well as where streams and wetlands overlap, trees would only be topped to comply with FAA glide slope regulations. The topping would be completed by hand using chain saws. The tree topping height would vary based on elevation and distance from runway end. Tree canopies would be maintained to the greatest extent possible to maintain the natural temperature and biology of the stream, as required by TDEC. Fallen trees would be removed by hand and placed within the buffer zone. Trees that fall into streams or that fall outside the buffer zone would be removed for offsite transport or using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

- Phase III – Only upland and stream buffer areas are present in the Phase III portion of the project (no wetlands occur in Phase III). The tree cutting in Phase III would occur after the first two phases. Approximately 25 acres of upland and 3 acres of stream buffer zones would be cut in the same methods as previously described in Phases I and II.

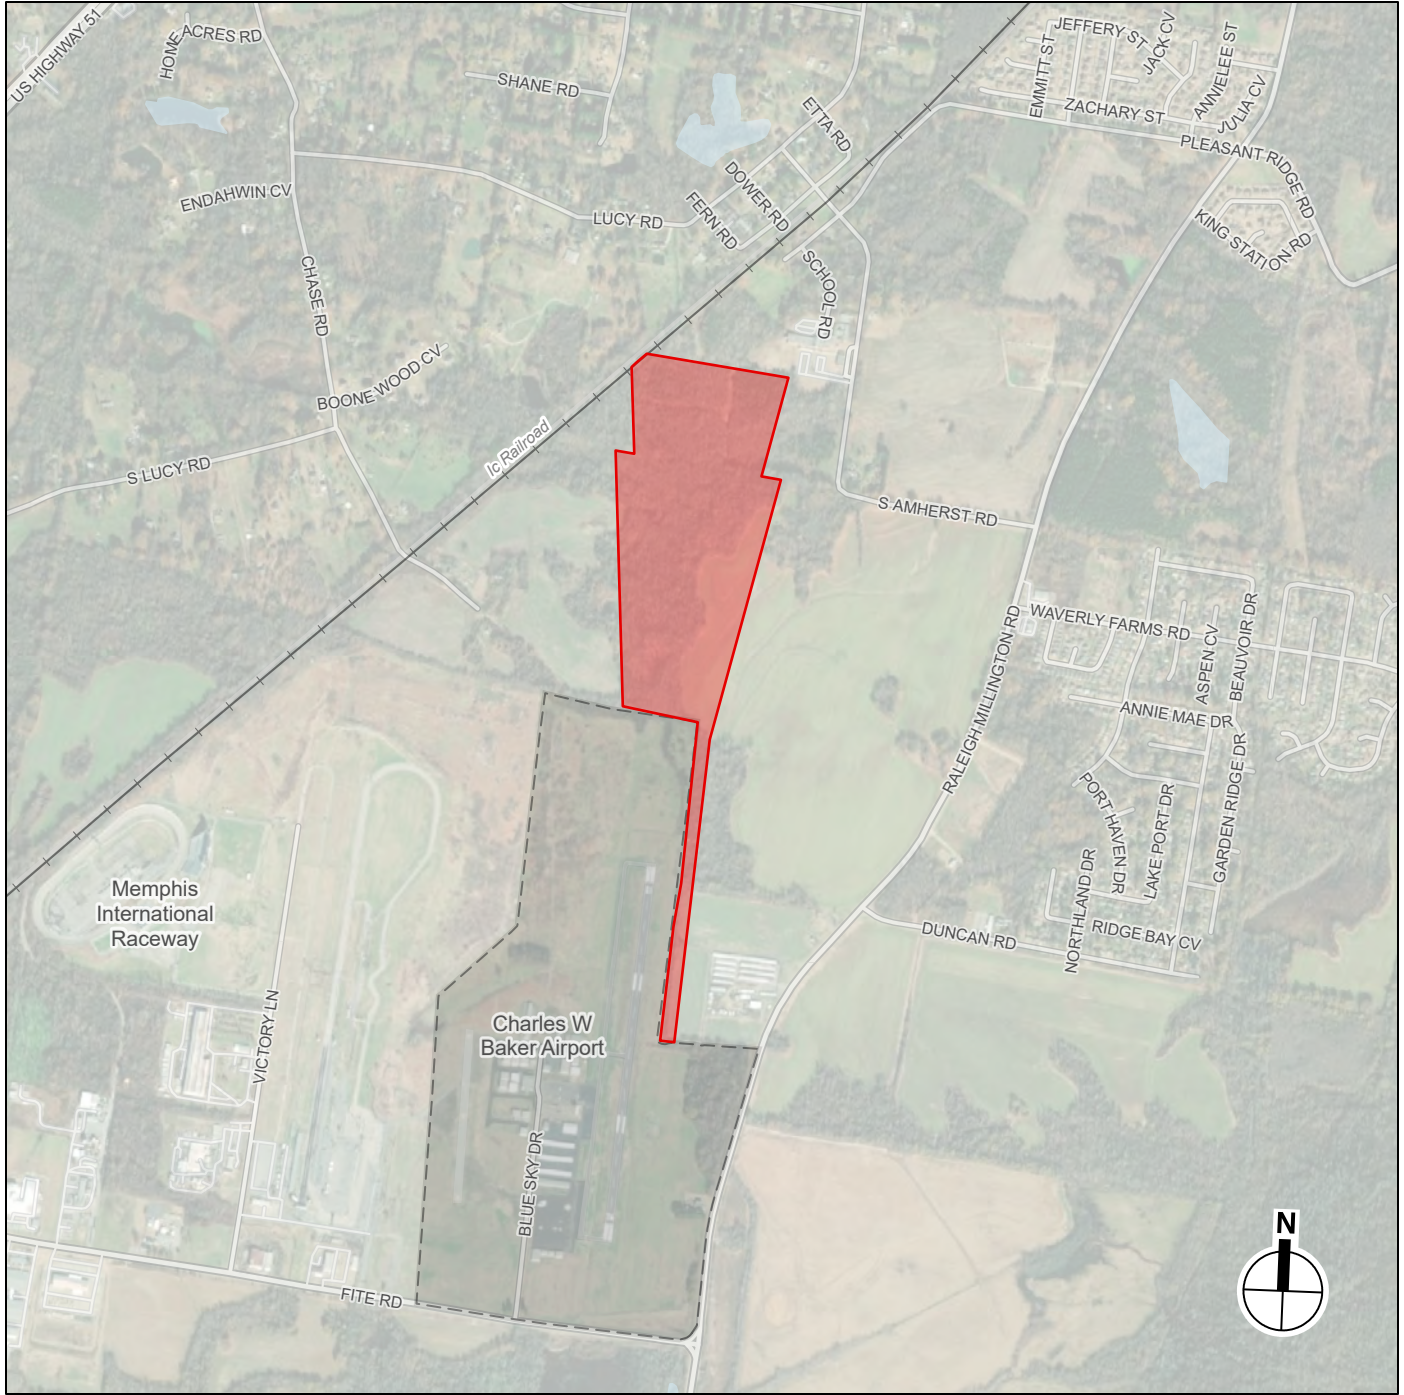

Tree removal activities would require temporary staging within the project area and would be determined when the site work began. These areas would be in upland portions of the project area and would not contribute any additional impact to wetlands or water resources. Multiple haul roads would be developed to minimize the crossing of streams on-site, with one primary road from the west via the Airport’s property and one from the east via S. Amherst Road. There is an unpaved road used for utility maintenance from S. Amherst Road that would be used to access the site. Any new haul roads required would be constructed in the uplands and only as necessary for access; some grading would occur as necessary. No disturbance related to haul road construction would be outside of the project area. After tree removal activities, the roads would be left in place.

Table 1-1 summarizes the acreage of cutting by phase and method.

Table 1-1 Proposed Activities, by Acreage and Phase

	Clear Cut (Upland Area)	Selective Cut (Wetlands and Buffer)

Ben,

I have reviewed the information that you have provided regarding this project. At this time, due to the nature and location of the project, it is the opinion of the Tennessee Wildlife Resources Agency (TWRA) that this project should not have adverse impacts to listed species under our authority. TWRA does require that BMP's be implemented throughout the project footprint as well as during any and all active construction.

I understand that you are already in contact with the United States Fish and Wildlife Services (USFWS), which would be the recommendation of the TWRA. TWRA would agree with any comments or concerns that the USFWS may have.

Thank you for the opportunity to review and comment on this project.

Please let me know if I can be of further assistance.

Subject: [EXTERNAL] NEPA - MSCAA Tree Clearing at Charles W. Baker Airport, Millington, TN

Allen,

The Memphis-Shelby County Airport Authority (MSCAA) is proposing some tree removal and topping to meet clearance regulations for the FAA at the Charles W. Baker Airport in Millington, TN. We are requesting TWRA's review of the proposed action as part of the NEPA process. Please find attached the project information for your review.

Although not spelled out in this “generic” review package, we are addressing the Northern long-eared and Indiana bats in coordination with USFWS. Neither is known to be located in the project vicinity and it looks like at most the project will fall under “may affect” but with approved incidental take through the existing Programmatic Biological Opinion on Final 4(d) Rule for the Northern Long-eared Bat and Activities Excepted from Take Prohibitions (as based on the IPaC review). Based on similar projects in the area, I’d assume that USFWS will come back with a “no effect” determination after full review.

Anyway, probably more info than you need. Let me know if you do need anything else though!

Thanks,
Ben Day

Re: Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing
Memphis-Shelby County Airport Authority
Millington, Shelby County, Tennessee

Dear Mr. Allan,

The Memphis-Shelby County Airport Authority (MSCAA) is proposing to remove or top obstructions (trees) within an approximate 100-acre tract located east and north of the Charles W. Baker Airport in Millington, Shelby County, TN. The project is proposed in order to comply with Federal Aviation Administration (FAA) grant assurance #20 (hazard removal and mitigation), and airspace safety (glide slope) requirements for aircraft take-offs and landings. Select wooded areas within the project area represent an airspace obstruction under Federal Aviation Regulation (FAR) Section 77.23 - Standards for Determining Obstructions. A more detailed project description, mapping, and photographic log of the project area is attached.

Tioga, on behalf of the MSCAA, is preparing the necessary environmental documentation for FAA's review. The TDEC-MEFO is invited to comment on the proposed project and will have an opportunity to review and comment on a forthcoming Environmental Assessment, addressing how the proposed project would potentially impact economic, social, and environmental resources.

Should you have any comments or questions regarding the proposed action, please contact me via email at bday@tiogaenv.com or by phone at (901) 791-2432.

Sincerely,
TIOGA ENVIRONMENTAL CONSULTANTS, INC.

Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing

Project Setting and Proposed Action

The Charles W. Baker Airport (2M8) is in Millington, Tennessee, which is a suburban area of the Memphis metropolitan area. Fite Road runs along the southern border of the Airport and Raleigh Millington Road is the major roadway to the east of the Airport. The entrance road to the Airport is from Fite Road. North of the airport is vegetated, undeveloped property, and to the west of the property is the Memphis International Raceway (**Figure 2**). The airport consists of one runway and associated taxiway, a terminal and office building, hangars, airport parking, fuel service, and surface parking for vehicles. Access to the airside area is through a restricted access gate.

The property north of Runway 18/36 is outside of the airport's property boundary and is comprised of vegetated and cleared, undeveloped land. There are wetlands and upland forest in this area, but with no habitat of concern. Some of the vegetated areas have trees that are tall enough to interfere with the Part 77 approach and transitional surfaces for Runway 18 (north end of Runway 18/36). These trees are defined as obstructions and can alter the way aircraft use that runway. Approximately 100 acres in this area include obstructions, which has been identified as the project area. The project area consists of property from six privately-owned parcels (with three different landowners).

The Proposed Action is to acquire the land on which these trees are located and then remove the tree obstructions to the approach surfaces within the alignment of Runway 18. These penetrations were identified as part of the Tennessee Aeronautics Division's annual inspection at 2M8, conducted on April 30, 2018 and a subsequent survey in 2020. During that inspection, it was determined that these tree obstructions are causing federal and state Part 77 (20:1) approach surface violations.

MSCAA proposes to acquire the areas of land that contain the current tree obstructions and those trees that were identified to be future obstructions in the same area. Once the property is acquired, MSCAA would remove and/or selectively top trees from upland and wetland areas within the project area (**Figure 2**) in three phases. The tree removal and tree topping activities would occur within approximately 81 acres of the site, consisting of uplands and wetland areas (**Figure 3**).

The project would occur over approximately two years, with the majority of the work to occur in 2023, and in three distinct areas, described by phase (**Figure 4**):

- Phase I - MSCAA would acquire the land delineated as the project area, which is approximately 100 acres in size. Within the Phase I portion of the project area, approximately 20 acres of the upland areas would be cleared, graded, and stabilized in the southern portion of the project area. This includes removing trees, stumps and roots, and debris (shrubs, bushes, etc.) identified as obstructions. Tree removal activities, and subsequent grading activities, would be conducted incrementally, in sections in accordance with Tennessee Department of Environment and Conservation (TDEC) construction stormwater permitting requirements. Fallen trees would be proposed for reuse as harvested timber. If some trees could not be used for timber, those would be burned on-site using Air Curtain Destructor (ACD) burn processes that would include the use of several burn pits with burn waste remaining as on-site fill at the location of the ACD, in consideration of Shelby County Health Department regulations regarding smoke and particulate matter.

- Phase II - Within the Phase II portion of the project area, approximately 20 acres of wetland area and 13 acres of upland designated as buffer zones (the area of a 30-foot buffer around those wetlands and 60-foot buffer area around the streams in the Phase II area), tree cutting (to the stump) and topping would be selective and no clear cutting would occur.

This work would be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

Within the 60-foot buffer zone around the streams, as well as where streams and wetlands overlap, trees would only be topped to comply with FAA glide slope regulations. The topping would be completed by hand using chain saws. The tree topping height would vary based on elevation and distance from runway end. Tree canopies would be maintained to the greatest extent possible to maintain the natural temperature and biology of the stream, as required by TDEC. Fallen trees would be removed by hand and placed within the buffer zone. Trees that fall into streams or that fall outside the buffer zone would be removed for offsite transport or using the ACD burn processes previously discussed. No heavy site-clearing machinery would be used.

- Phase III – Only upland and stream buffer areas are present in the Phase III portion of the project (no wetlands occur in Phase III). The tree cutting in Phase III would occur after the first two phases. Approximately 25 acres of upland and 3 acres of stream buffer zones would be cut in the same methods as previously described in Phases I and II.

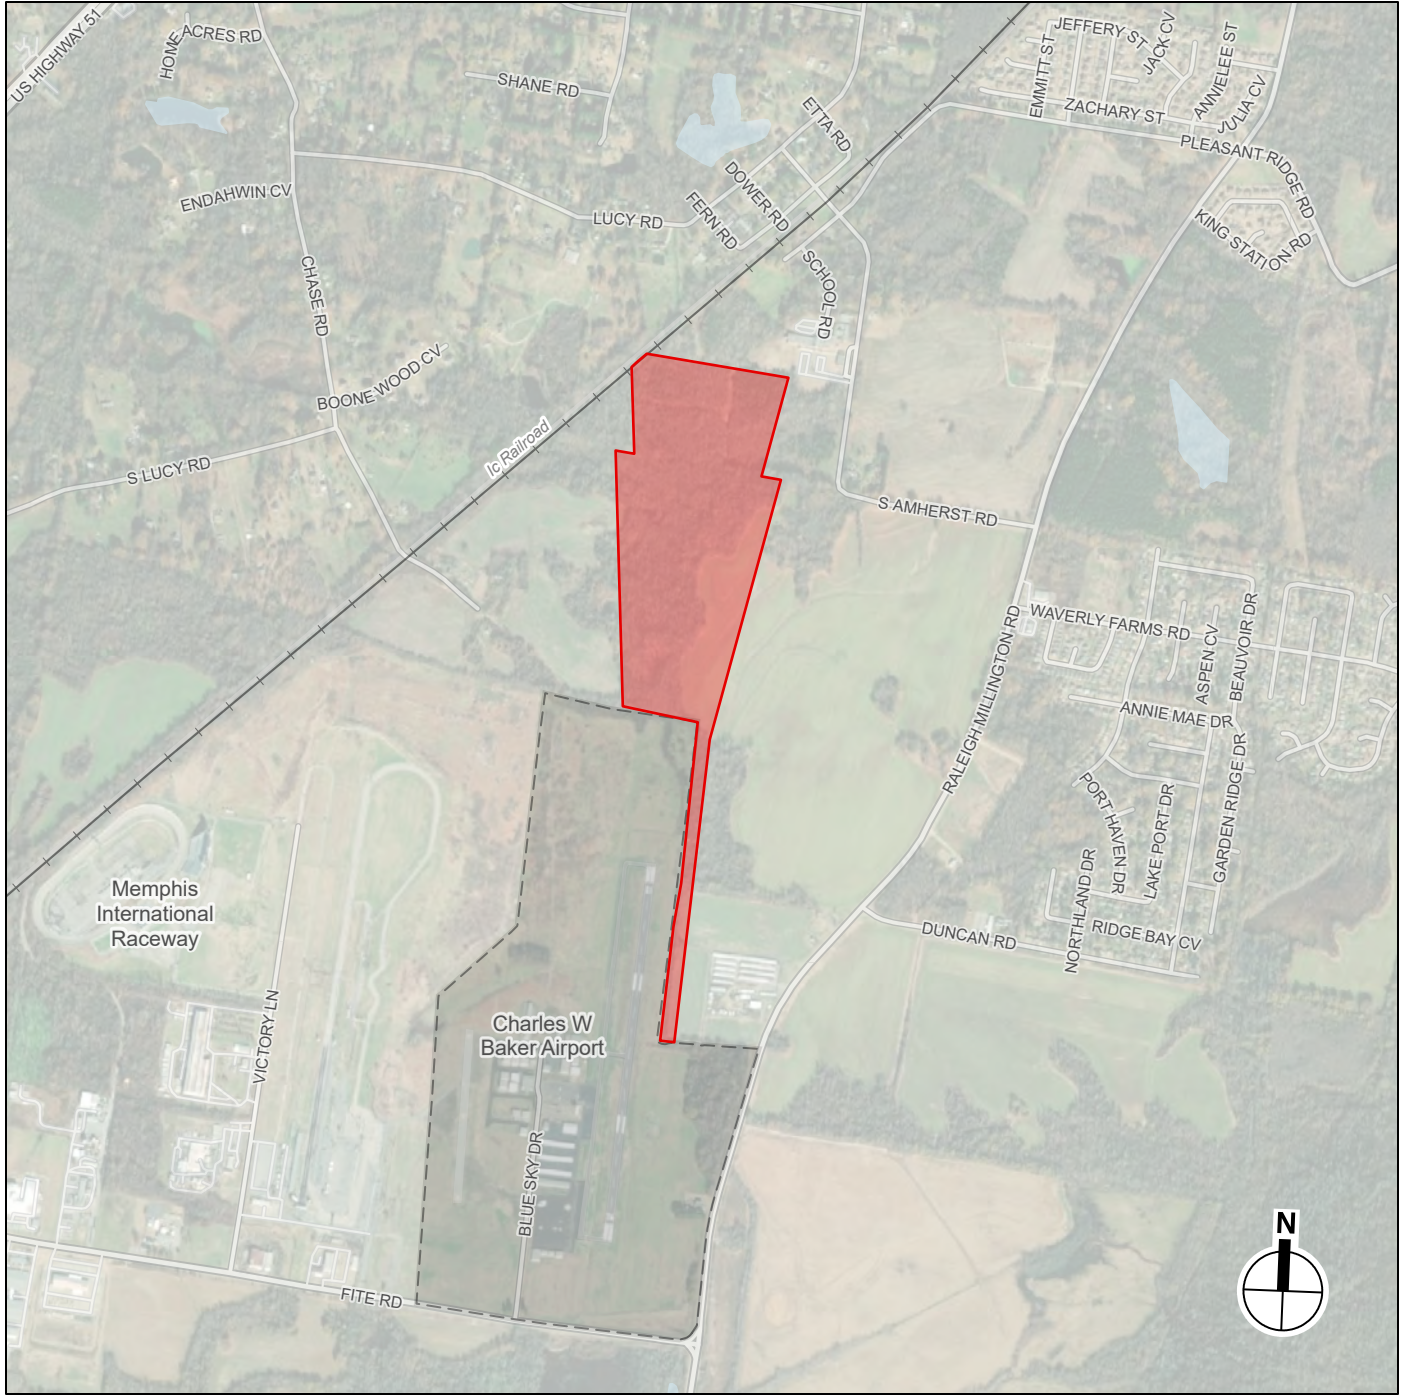

Tree removal activities would require temporary staging within the project area and would be determined when the site work began. These areas would be in upland portions of the project area and would not contribute any additional impact to wetlands or water resources. Multiple haul roads would be developed to minimize the crossing of streams on-site, with one primary road from the west via the Airport’s property and one from the east via S. Amherst Road. There is an unpaved road used for utility maintenance from S. Amherst Road that would be used to access the site. Any new haul roads required would be constructed in the uplands and only as necessary for access; some grading would occur as necessary. No disturbance related to haul road construction would be outside of the project area. After tree removal activities, the roads would be left in place.

Table 1-1 summarizes the acreage of cutting by phase and method.

Table 1-1 Proposed Activities, by Acreage and Phase

	Clear Cut (Upland Area)	Selective Cut (Wetlands and Buffer)
Phase I & Phase II	20 acres upland	20 acres wetland 13 acres of buffer
Phase III	25 acres upland	3 acres buffer
Total	45 acres	36 acres

DEPARTMENT OF THE ARMY
U.S. ARMY CORPS OF ENGINEERS, MEMPHIS DISTRICT
167 NORTH MAIN STREET B-202
MEMPHIS, TENNESSEE 38103-1894

May 2, 2022

Mr. Ben S. Day
Tioga Environmental Consultants, Inc.
357 North Main Street
Memphis, Tennessee 38103

Dear Mr. Day:

This is in response to your request to remove or top obstructions (trees) within an approximate 100-acre tract located east and north of Charles W. Baker Airport in Millington, Shelby County, Tennessee, as shown on the attached map. The purpose of the tree clearing is to comply with Federal Aviation Administration's grant assurance #20 (hazard removal and mitigation) and airspace safety (glide slope) requirements for aircraft take-offs and landings.

Within the Phase II portion of the project area, approximately 20 acres of wetland area and 13 acres of upland designated as buffer zones (the area of a 30-foot buffer around those wetlands and 60-foot buffer area around the streams in the Phase II area), tree cutting (to the stump) and topping would be selective and no clear cutting would occur. This work would be done with hand-held equipment and no heavy equipment or vehicles would enter wetland and buffer zones. Cut trees that fall into wetlands would be left in place, except for manual maneuvering to maintain existing drainage. Cut treetops that fall outside the buffer zones would be removed for either offsite transport or burned on-site using the Air Curtain Destructor burn processes previously discussed. No heavy site-clearing machinery would be used.

Based on the description provided, your activity does not constitute a discharge of dredged or fill material and therefore does not require Department of the Army (DA) permit authorization under Section 404 of the Clean Water Act. However, please note that if work is done on site that results in a discharge of dredged or fill material into waters of the United States, a DA permit may be required. Information regarding silvicultural best management practices that can help minimize the potential to impact waters can be found at <https://www.tn.gov/content/dam/tn/agriculture/documents/forestry/AgForBMPs.pdf>.

The Memphis District, Regulatory Division is committed to providing quality and timely service to our customers. In an effort to improve customer service, please take a moment to go to our customer service survey found on our website at <https://regulatory.ops.usace.army.mil/customer-service-survey/>. Your comments, positive or negative, will not affect any current or future dealings with the Corps of Engineers.

Your cooperation in the regulatory program is appreciated. If you have questions, please contact Mitch Elcan at (901) 544-0737. Please refer to File No. MVM-2022-125.

Sincerely,

Roger S. Allan
Deputy Chief
Regulatory Division

Section 323.4 - Discharges not requiring permits.

(a) General. Except as specified in paragraphs (b) and (c) of this section, any discharge of dredged or fill material that may result from any of the following activities is not prohibited by or otherwise subject to regulation under section 404:

- (1) (i) Normal farming, silviculture and ranching activities such as plowing, seeding, cultivating, minor drainage, and harvesting for the production of food, fiber, and forest products, or upland soil and water conservation practices, as defined in paragraph (a)(1)(iii) of this section.
- (ii) To fall under this exemption, the activities specified in paragraph (a)(1)(i) of this section must be part of an established (i.e., on-going) farming, silviculture, or ranching operation and must be in accordance with definitions in Section 323.4(a)(1)(iii). Activities on areas lying fallow as part of a conventional rotational cycle are part of an established operation. Activities which bring an area into farming, silviculture, or ranching use are not part of an established operation. An operation ceases to be established when the area on which it was conducted has been converted to another use or has lain idle so long that modifications to the hydrological regime are necessary to resume operations. If an activity takes place outside the waters of the United States, or if it does not involve a discharge, it does not need a section 404 permit, whether or not it is part of an established farming, silviculture, or ranching operation.
- (iii) (A) Cultivating means physical methods of soil treatment employed within established farming, ranching and silviculture lands on farm, ranch, or forest crops to aid and improve their growth, quality or yield.
- (B) Harvesting means physical measures employed directly upon farm, forest, or ranch crops within established agricultural and silvicultural lands to bring about their removal from farm, forest, or ranch land, but does not include the construction of farm, forest, or ranch roads.
- (C) (1) Minor Drainage means:

- (i) The discharge of dredged or fill material incidental to connecting upland drainage facilities to waters of the United States, adequate to effect the removal of excess soil moisture from upland croplands. (Construction and maintenance of upland (dryland) facilities, such as ditching and tiling, incidental to the planting, cultivating, protecting, or harvesting of crops, involve no discharge of dredged or fill material into waters of the United States, and as such never require a section 404 permit.);
- (ii) The discharge of dredged or fill material for the purpose of installing ditching or other such water control facilities incidental to planting, cultivating, protecting, or harvesting of rice, cranberries or other wetland crop species, where these activities and the discharge occur in waters of the United States which are in established use for such agricultural and silvicultural wetland crop production;
- (iii) The discharge of dredged or fill material for the purpose of manipulating the water levels of, or regulating the flow or distribution of water within, existing impoundments which have been constructed in accordance with applicable requirements of CWA, and which are in established use for the production of rice, cranberries, or other wetland crop species. (The provisions of paragraphs (a)(1)(iii)(C)(1) (ii) and (iii) of this section apply to areas that are in established use exclusively for wetland crop production as well as areas in established use for conventional wetland/non-wetland crop rotation (e.g., the rotations of rice and soybeans) where such rotation results in the cyclical or intermittent temporary dewatering of such areas.)
- (iv) The discharges of dredged or fill material incidental to the emergency removal of sandbars, gravel bars, or other similar blockages which are formed during flood flows or other events, where such blockages close or constrict previously existing drainageways and, if not promptly removed, would result in damage to or loss of existing crops or would impair or prevent the plowing, seeding, harvesting or cultivating of crops on land in established use for crop production. Such removal does not include enlarging or extending the dimensions of, or changing the bottom elevations of, the affected drainageway as it existed prior to the formation of the blockage. Removal must be accomplished within one year of discovery of such blockages in order to be eligible for exemption.

(2) Minor drainage in waters of the U.S. is limited to drainage within areas that are part of an established farming or silviculture operation. It does not include drainage associated with the immediate or gradual conversion of a wetland to a non-wetland (e.g., wetland species to upland species not typically adapted to life in saturated soil conditions), or conversion from one wetland use to another (for example, silviculture to farming). In addition, minor drainage does not include the construction of any canal, ditch, dike or other waterway or structure which drains or otherwise significantly modifies a stream, lake, swamp, bog or any other wetland or aquatic area constituting waters of the

United States. Any discharge of dredged or fill material into the waters of the United States incidental to the construction of any such structure or waterway requires a permit.

(D) Plowing means all forms of primary tillage, including moldboard, chisel, or wide-blade plowing, discing, harrowing and similar physical means utilized on farm, forest or ranch land for the breaking up, cutting, turning over, or stirring of soil to prepare it for the planting of crops. The term does not include the redistribution of soil, rock, sand, or other surficial materials in a manner which changes any area of the waters of the United States to dry land. For example, the redistribution of surface materials by blading, grading, or other means to fill in wetland areas is not plowing. Rock crushing activities which result in the loss of natural drainage characteristics, the reduction of water storage and recharge capabilities, or the overburden of natural water filtration capacities do not constitute plowing. Plowing as described above will never involve a discharge of dredged or fill material.

(E) Seeding means the sowing of seed and placement of seedlings to produce farm, ranch, or forest crops and includes the placement of soil beds for seeds or seedlings on established farm and forest lands.

(2) Maintenance, including emergency reconstruction of recently damaged parts, of currently serviceable structures such as dikes, dams, levees, groins, riprap, breakwaters, causeways, bridge abutments or approaches, and transportation structures. Maintenance does not include any modification that changes the character, scope, or size of the original fill design. Emergency reconstruction must occur within a reasonable period of time after damage occurs in order to qualify for this exemption.

(3) Construction or maintenance of farm or stock ponds or irrigation ditches, or the maintenance (but not construction) of drainage ditches. Discharges associated with siphons, pumps, headgates, wingwalls, weirs, diversion structures, and such other facilities as are appurtenant and functionally related to irrigation ditches are included in this exemption.

(4) Construction of temporary sedimentation basins on a construction site which does not include placement of fill material into waters of the U.S. The term "construction site" refers to any site involving the erection of buildings, roads, and other discrete structures and the installation of support facilities necessary for construction and utilization of such structures. The term also includes any other land areas which involve land-disturbing excavation activities, including quarrying or other mining activities, where an increase in the runoff of sediment is controlled through the use of temporary sedimentation basins.

(5) Any activity with respect to which a state has an approved program under section 208(b)(4) of the CWA which meets the requirements of sections 208(b)(4)(B) and (C).

(6) Construction or maintenance of farm roads, forest roads, or temporary roads for moving mining equipment, where such roads are constructed and maintained in accordance with **best management practices (BMPs)** to assure that flow and circulation patterns and chemical and biological characteristics of waters of the United States are not impaired, that the reach of the waters of the United States is not reduced, and that any adverse effect on the aquatic environment will be otherwise minimized. These **BMPs** which must be applied to satisfy this provision shall include those detailed **BMPs** described in the state's approved program description pursuant to the requirements of 40 CFR Part 233.22(i), and shall also include the following baseline provisions:

(i) Permanent roads (for farming or forestry activities), temporary access roads (for mining, forestry, or farm purposes) and skid trails (for logging) in waters of the U.S. shall be held to the minimum feasible number, width, and total length consistent with the purpose of specific farming, silvicultural or mining operations, and local topographic and climatic conditions;

(ii) All roads, temporary or permanent, shall be located sufficiently far from streams or other water bodies (except for portions of such roads which must cross water bodies) to minimize discharges of dredged or fill material into waters of the U.S.;

(iii) The road fill shall be bridged, culverted, or otherwise designed to prevent the restriction of expected flood flows;

(iv) The fill shall be properly stabilized and maintained during and following construction to prevent erosion;

(v) Discharges of dredged or fill material into waters of the United States to construct a road fill shall be made in a manner that minimizes the encroachment of trucks, tractors, bulldozers, or other heavy equipment within waters of the

- United States (including adjacent wetlands) that lie outside the lateral boundaries of the fill itself;
- (vi) In designing, constructing, and maintaining roads, vegetative disturbance in the waters of the U.S. shall be kept to a minimum;
 - (vii) The design, construction and maintenance of the road crossing shall not disrupt the migration or other movement of those species of aquatic life inhabiting the water body;
 - (viii) Borrow material shall be taken from upland sources whenever feasible;
 - (ix) The discharge shall not take, or jeopardize the continued existence of, a threatened or endangered species as defined under the Endangered Species Act, or adversely modify or destroy the critical habitat of such species;
 - (x) Discharges into breeding and nesting areas for migratory waterfowl, spawning areas, and wetlands shall be avoided if practical alternatives exist;
 - (xi) The discharge shall not be located in the proximity of a public water supply intake;
 - (xii) The discharge shall not occur in areas of concentrated shellfish production;
 - (xiii) The discharge shall not occur in a component of the National Wild and Scenic River System;
 - (xiv) The discharge of material shall consist of suitable material free from toxic pollutants in toxic amounts; and
 - (xv) All temporary fills shall be removed in their entirety and the area restored to its original elevation.

(b) If any discharge of dredged or fill material resulting from the activities listed in paragraphs (a)(1)-(6) of this section contains any toxic pollutant listed under section 307 of the CWA such discharge shall be subject to any applicable toxic effluent standard or prohibition, and shall require a Section 404 permit.

(c) Any discharge of dredged or fill material into waters of the United States incidental to any of the activities identified in paragraphs (a) (1)-(6) of this section must have a permit if it is part of an activity whose purpose is to convert an area of the waters of the United States into a use to which it was not previously subject, where the flow or circulation of waters of the United States may be impaired or the reach of such waters reduced. Where the proposed discharge will result in significant discernible alterations to flow or circulation, the presumption is that flow or circulation may be impaired by such alteration. For example, a permit will be required for the conversion of a cypress swamp to some other use or the conversion of a wetland from silvicultural to agricultural use when there is a discharge of dredged or fill material into waters of the United States in conjunction with construction of dikes, drainage ditches or other works or structures used to effect such conversion. A conversion of a Section 404 wetland to a non-wetland is a change in use of an area of waters of the United States. A discharge which elevates the bottom of waters of the United States without converting it to dry land does not thereby reduce the reach of, but may alter the flow or circulation of, waters of the United States.

(d) Federal projects which qualify under the criteria contained in section 404(r) of the CWA are exempt from section 404 permit requirements, but may be subject to other state or Federal requirements.

Re: Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing
Memphis-Shelby County Airport Authority
Millington, Shelby County, Tennessee

Dear Mr. Aaron,

The Memphis-Shelby County Airport Authority (MSCAA) is proposing to remove or top obstructions (trees) within an approximate 100-acre tract located east and north of the Charles W. Baker Airport in Millington, Shelby County, TN. The project is proposed in order to comply with Federal Aviation Administration (FAA) grant assurance #20 (hazard removal and mitigation), and airspace safety (glide slope) requirements for aircraft take-offs and landings. Select wooded areas within the project area represent an airspace obstruction under Federal Aviation Regulation (FAR) Section 77.23 - Standards for Determining Obstructions. A more detailed project description, mapping, and photographic log of the project area is attached.

Tioga, on behalf of the MSCAA, is preparing the necessary environmental documentation for FAA's review. The TDEC-MEFO is invited to comment on the proposed project and will have an opportunity to review and comment on a forthcoming Environmental Assessment, addressing how the proposed project would potentially impact economic, social, and environmental resources.

Should you have any comments or questions regarding the proposed action, please contact me via email at bday@tiogaenv.com or by phone at (901) 791-2432.

Sincerely,
TIOGA ENVIRONMENTAL CONSULTANTS, INC.

Subject: RE: [External Email]MSCAA Charles W. Baker Airport Tree Clearing - Question on farmland "conversion"
Date: Wednesday, May 04, 2022 8:04:31 AM

Good Morning Mr. Day,

No, clear-cutting does not represent conversion of the prime farmlands since the land isn't being taken out of agricultural production. Therefore, an AD-1006 form will not be needed at this time. In the future, please send projects needing FPPA review to the shared inbox TNHAWC@usda.gov to ensure a prompt reply and let me know if you have any additional questions.

Have a great day,

Brooke Lucas

Please send any concerns or suspicious messages to: Spam.Abuse@usda.gov

Aaron,

We are working with the the Memphis-Shelby County Airport Authority (MSCAA) on a tree / obstruction clearing project at the referenced airport in Millington, TN. In order to meet FAA regulations / guidelines for aircraft clearance, MSCAA needs to clear and/or top trees from an approximately 100-acre tract north of the airport. Of the 100-acres, approximately 15.4 acres are already in active cultivation, with the remainder being mostly wooded (a mix of uplands and wetlands and streams), and approximately 67 acres are designated as prime farmland.

Approximately 45-acres of the wooded area are scheduled for clear cutting. I don't have an exact number on the overlap between the 67-acres of prime farmland and the 45 acres of clear cut yet.

My question for you is, does the clear-cutting represent conversion of the prime farmlands? The airport is not expanding such that there will be any additional restrictions on the future use of the acreage that would limit its use for agriculture, other than obviously maintaining the clearance

objectives.

I've attached the standard coordination package we've been using for other agencies so you have some maps for reference. If you feel this does constitute conversion, I'll get a Form AD-1006 completed.

Thanks, and let me know if I can provide anything further.

Ben

Nashville, TN 37243-0442

email: Jennifer.Barnett@tn.gov

Dear Ms. Barnett,

Memphis-Shelby County Airport Authority is undergoing an environmental evaluation associated with a project at Charles Baker Airport. This environmental assessment is to evaluate the potential effects of a tree clearing project north of the airport to address current obstructions to aircraft operations. MSCAA is preparing this evaluation in coordination with Tennessee Department of Transportation, Aeronautics. As part of this work, an archaeological survey was conducted of the subject property. Attached is a detailed description of the project and the archeology report associated with Site survey. TDOT has requested we submit this report to you for review and concurrence.

As documented in the report, the archaeological survey included a field visit and survey. While 2 sites were identified, neither are recommended as eligible and no further work is recommended.

If you have any questions or if additional information is needed, please contact me at (901) 922-8754 or lmorris@flymemphis.com.

Sincerely,

A handwritten signature in blue ink that reads 'Lori Morris'.

Lori Morris PE
MSCAA, Manager of Environmental Services

1. A Detailed Project Description

The Memphis-Shelby County Airport Authority (MSCAA) proposes to purchase 6 parcels from 3 private owners and remove and/or cut trees from upland and aquatic wooded areas within portions of an approximately 97.2-acre tract of property located north of Charles Baker General Aviation Airport in Memphis, Shelby County, Tennessee (the Site) (Figure 1). A physical address does not exist for the Site; it is located north of Charles Baker Runway 18. The lead federal agency for the undertaking is the Tennessee Department of Transportation, Aeronautics (TDOT).

The project is proposed to comply with FAA airspace safety requirements for aircraft take-offs and landings (glide slope) at Charles Baker. Select wooded areas at the Site represent an airspace obstruction or potential future obstruction, under Federal Aviation Regulation (FAR) Section 77.23 - *Standards for Determining Obstructions*. Tree removal and tree cutting activities will occur within approximately 60 acres of the Site and are proposed in three phases, over a three-year period. An Archeological Survey was completed for the Site in 2022 and is attached to this document.

Phase I of the proposed project includes the removal of trees, including stumps and roots, within approximately 20 acres of upland wooded area (Figure 2). Tree removal under Phase I of the project is proposed using site-clearing machinery. Ground-disturbing activities such as tree removal, and grading activities, are proposed to be conducted incrementally, in 10-acre sections.

Phase II of the proposed project includes the selective topping and cutting of trees within approximately 20 acres of aquatic wooded area, as well as 12 acres of buffer area surrounding the wetland/streams. The location of the onsite aquatic resources is depicted on Figure 2. Ground disturbing activities are not proposed in the Phase II areas. Tree trunks and roots will be left intact. The principal drainage on the Site flows north through an unnamed tributary of Loosahatchie River.

To comply with TDEC erosion and sediment controls, natural riparian buffer zones are proposed along onsite stream banks and around onsite wetlands. The natural riparian buffer zones will serve as erosion and sediment controls, as well as mitigate for potential changes in onsite stream water temperature due to tree canopy removal. A natural riparian buffer zone of 60 feet (ft) is proposed for streams, measured from the tops of the stream banks. A 30-ft natural riparian buffer

zone is proposed around onsite wetlands. Site-clearing machinery is not proposed for Phase II areas. The topping of trees in the Phase II areas will be completed by hand using chain saws.

A Phase I Archeological Survey is included as Attachment 1 and includes the fieldwork took place from February 2 to 16, 2022. The recommended archaeological Area of Potential Effect (APE) is limited to areas where ground-disturbing activities will take place (i.e., tree stump removal, grubbing, and access road construction). Although ground-disturbing activities are limited to the wooded terrain in the uplands, the entire 97.2-acres is considered the APE.

2. Lead Federal Agency for the Undertaking

Tennessee Department of Transportation, Aeronautics

3. The Exact Location and Boundary of the Proposed Project Depicted on a 1:24000 USGS Topo Map

See Figure 1 for the project boundary. GIS shapefiles of the project boundary are included in this submittal.

4. Physical Address for the Undertaking and/or Lat. Long Coordinates

A physical address does not exist for the Site; it is located north of Charles Baker Runway 18.

5. Recent Photographs of the Project Area, Including Buildings Within a Site Distance of the Project

The Archaeological Assessment includes photos and aerial imagery of the Project Area. No buildings are within the project Site.

6. Information regarding present and past use of the project's property

The project site is currently owned by the three private residents. The present use of the property includes some farmland but is mostly forested/vacant. The property includes a utility easement for an underground gas pipeline, owned by the Memphis, Light, Gas and Water utility provider. The utility easement is located near the eastern portion of the property (Figure 2).

The past uses of the property are described in detail in the attached Phase I Archeological Assessment. The survey resulted in the identification of two newly recorded archaeological sites (Site 40SY925 and Site 40SY926); there are no standing structures. Both are deflated, low-density surface scatters with no subsurface integrity, and 100 percent surface collections were obtained from each. Site 40SY925 is multi-component, and the use of extra-local raw materials among the two Late Archaic/Early Woodland PP/Ks from here implies that the groups occupying the site at that time were mobile and likely practiced a seasonal round settlement pattern with part of the year residing in west Tennessee near the Mississippi River and part of the year living to the east along the lower Tennessee River. Later site 40SY925 was occupied by a more sedentary Woodland group that used ceramics, and then during the late nineteenth and early twentieth century it was a farmstead. Site 20SY926 is interpreted as a briefly occupied Late Woodland/Mississippian hunting camp or chipping station.

The findings of the 2022 Phase I Archeological Assessment indicate there are no listed, eligible or potentially eligible archaeological resources within the proposed APE.

7. Any Known Information Regarding Historic Properties That May Be Present Within the Area of Potential Effects

Based on the findings of the Phase I Archeological Assessment, the proposed APE does not appear to include architectural and archeological resources eligible for or listed on the National Register of Historic Places.

Memphis, TN 38116-3856

RE: FAA / Federal Aviation Administration, Charles Baker Airport, Tree Clearing North of Airport, Millington, Shelby County, TN

Dear Ms. Morris:

In response to your request, we have reviewed the documents you submitted regarding your proposed undertaking. Our review of and comment on your proposed undertaking are among the requirements of Section 106 of the National Historic Preservation Act. This Act requires federal agencies or applicants for federal assistance to consult with the appropriate State Historic Preservation Office before they carry out their proposed undertakings. The Advisory Council on Historic Preservation has codified procedures for carrying out Section 106 review in 36 CFR 800 (Federal Register, December 12, 2000, 77698-77739).

After considering the documentation submitted, it is our opinion that there are no National Register of Historic Places listed or eligible properties affected by this undertaking. We have made this determination because either: no National Register listed or eligible Historic Properties exist within the undertaking's area of potential effects, the specific location, size, scope and/or nature of the undertaking and its area of potential effects precluded affects to Historic Properties, the undertaking will not alter any characteristics of an identified eligible or listed Historic Property that qualify the property for listing in the National Register, or it will not alter an eligible Historic Property's location, setting or use. We have no objections to your proceeding with your undertaking.

If your agency proposes any modifications in current project plans or discovers any archaeological remains during the ground disturbance or construction phase, please contact this office to determine what further action, if any, will be necessary to comply with Section 106 of the National Historic Preservation Act. If you are applying for federal funds, license or permit, you should submit this letter as evidence of consultation under Section 106 to the appropriate federal agency, which, in turn, should contact us as required by 36 CFR 800. If you represent a federal agency, you should submit a formal determination of eligibility and effect to us for comment. You may direct questions or comments to Casey Lee (615) 253-3163.

Sincerely,

for: E. Patrick McIntyre, Jr.
State Historic Preservation Officer

Re: Hydrologic Determination QHP2205.013
 Charles Baker Airport
 Millington, Shelby County, Tennessee

Dear Mr. Day,

The Division of Water Resources has reviewed the documentation prepared by you seeking concurrence with the report that was submitted in support of the Hydrologic Determination and Wetland Delineation conducted for the above referenced location in Shelby County, TN.

The channel identified as the "STR-1" is a stream beginning at (35.29649, -89.93018) and ending at (35.27935, -89.93018) as indicated in the Hydrologic Determination Report.

The channel identified as the "STR-2" is a stream beginning at (35.28801, -89.93206) and ending at (35.28756, -89.93059) as indicated in the Hydrologic Determination Report.

The channel identified as "EPH-1 A-D" is a wet weather conveyance beginning approximately at (35.28985, -89.92980) and ending at (35.28992, -89.93023) as indicated in the Hydrologic Determination Report.

The channel identified as "EPH-2" is a wet weather conveyance beginning at (35.29633, -89.92931) and ending at (35.29444, -89.93017) as indicated in the Hydrologic Determination Report.

The channel identified as “EPH-3” is a wet weather conveyance beginning at (35.29639, -89.92992) and ending at (35.29608, -89.93008) as indicated in the Hydrologic Determination Report.

The water body identified as “WTL-1” located approximately at (35.28852, -89.93139) is a 21.5-acre wetland.

The water body identified as “WTL-2” located approximately at (35.28639, -89.92952) is a 3.38-acre wetland.

The water body identified as “WTL-3” located approximately at (35.29410, -89.93244) is a 302 foot, 0.07-acre linear wetland.

The water body identified as “WTL-4” located approximately at (35.29380, -89.93243) is a 158 foot, 0.036-acre linear wetland.

Any alterations to designated streams or wetlands may only be performed under the coverage of, and conformance to, a valid Aquatic Resource Alteration Permit (ARAP) issued by the Tennessee Division of Water Resources. Any alterations to wet weather conveyances must be made in accordance with the requirements of Tenn. Code Ann. § 69 -3- 108(q). The ARAP information, along with a permit application and the terms of the permit may be obtained at the following webpage: [Aquatic Resource Alteration Permit \(ARAP\) \(tn.gov\)](http://www.tn.gov/aquatic-resource-alteration-permit).

Please be aware that hydrologic determinations are advised and governed by Tennessee Department of Environment and Conservation (TDEC) rules and regulations and therefore only apply to the State’s permitting process. Water features located onsite may also be considered jurisdictional Waters of the United States; therefore, alterations to them should only be performed after consultation with the U.S. Army Corps of Engineers (USACE).

If you have any questions, please contact Mrs. Ginna McWhirter at 901-426-6691 or by E-mail at Ginna.McWhirter@tn.gov.

Sincerely,

Ginna McWhirter

Description

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Phase I Environmental Site Assessment

**CHARLES W. BAKER AIRPORT
LAND ACQUISITION & TREE OBSTRUCTIONS CLEARING
MILLINGTON, SHELBY COUNTY, TENNESSEE**

December 2021

Project No. 571206.00

Prepared For:
Memphis-Shelby County Airport Authority
2491 Winchester Road, Suite 113
Memphis, TN 38116

Prepared By:

357 North Main Street
Memphis, Tennessee 38103

EXECUTIVE SUMMARY

The Memphis-Shelby County Airport Authority (MSCAA) requested AKRF, Inc. (AKRF) conduct a Phase I Environmental Site Assessment (ESA) of the approximately 100 acre undeveloped tract located north and east of the Charles W. Baker Airport at 3870 Fite Road, Millington, Shelby County, Tennessee as a component of review in accordance with the National Environmental Policy Act (NEPA).

As requested by AKRF, Tioga Environmental Consultants, Inc. (Tioga) have performed an ESA on the subject Property in conformance with the scope and limitations of ASTM Practice E 1527-13. Any exceptions to, or deletions from, this practice are clearly described in Sections 1.5 and 1.6 of this Report.

This assessment included site reconnaissance performed on November 15, 2021, interviews with knowledgeable people, records review and a report. Having completed the process detailed in the standard, we have determined there is no evidence of **recognized environmental conditions** in connection with the Property.

We have prepared and included as part of this executive summary, a matrix of environmental related conditions used in determining if recognized environmental conditions are present and may impact the Property. It is important to note that “Yes” answers to a “condition” do not necessarily mean a recognized environmental condition exists but rather information was discovered that was considered in determining if the information constituted a recognized environmental condition. The far right column of the matrix provides the section number of the report that speaks specifically to the identified environmental condition.

A complete listing of the findings associated with this assessment is contained in Section 6.0 of this report.

**Phase I Environmental Site Assessment Evaluation Summary Table

1.0 INTRODUCTION

1.1 LOCATION AND LEGAL DESCRIPTION

The subject Property consists of an approximately 100 acre tract located north and east of the Charles W. Baker Airport at 3870 Fite Road in Millington, Shelby County, Tennessee. The tract consists of portions of six individual tax parcels and will be referred to throughout this report as the subject Property unless specifically stated otherwise. The approximate latitude and longitude for the Property is 35 degrees, 17 minutes, 27.79 seconds, north; and 89 degrees, 55 minutes, 49.12 seconds west, respectively. A legal description was not provided for review.

A vicinity map, site map and a relevant portion of the topographical map are included in Appendix 1 and provide detail as to the location and physical surroundings of the Property.

1.2 PURPOSE

Tioga was requested to complete this Phase I Environmental Site Assessment (ESA) on the 100 acre tract north and east of the Charles W. Baker Airport at 3870 Fite Road, Millington, Shelby County, Tennessee on behalf of the Memphis-Shelby County Airport Authority (MSCAA) as a component of their due diligence process to satisfy the requirements of the National Environmental Policy Act.

As defined in the American Society for Testing and Materials Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Standard E 1527-13, a Phase I ESA is intended to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability. A Phase I report includes a brief description of the Property, its location, and its surroundings and identifies, to the extent feasible, associated *recognized environmental conditions*.

For clarity, the term **recognized environmental condition** is defined in the ASTM Standard as “*the presence or likely presence of any **hazardous substances** or **petroleum products** in, on, or at a **Property**: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*”

A **controlled recognized environmental condition** is “*a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*”

A **historical recognized environmental condition** is “*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and*

has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

A glossary of selected terms as defined in ASTM Standard E 1527-13 is provided in Appendix 8 for reference.

1.3 SCOPE OF SERVICES

The services provided in completing this ESA are consistent with the requirements of the ASTM Standard E 1527-13 and include site reconnaissance, a records review, interviews and a report including documentation of the findings, opinions, and conclusions of the environmental professional.

The scope of services did not include testing for specific solids, liquids or gases, such as tank testing, soil boring and testing, air monitoring, magnetic survey, or wetland investigation. Additional investigation can be performed if required, and authorized in writing by the Client.

1.4 SIGNIFICANT ASSUMPTIONS

No significant assumptions were made in conducting this ESA.

1.5 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

Due care was taken while conducting this site assessment process. As the ASTM Standard clearly points out, an ESA cannot completely eliminate uncertainty about the Property's potential for recognized environmental conditions. It is important to understand that environmental assessments are not exhaustive and are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from reasonably ascertainable and practically reviewable records, site reconnaissance, and interviews. Tioga Environmental Consultants, Inc. accepts no liability for undetected or undisclosed conditions consistent with reasonable cost and time constraints provided for by the standard. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surficial observations and historical information.

Additionally, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. Accordingly, the period for which this report can be relied upon is governed by the provisions of ASTM Standard E 1527-13; Sections 4.6 and 4.7.

Our professional services have been performed, our findings defined, our opinions formed and our conclusions recorded regarding recognized environmental conditions at the property. Our report has been prepared consistent with customary principles and practices in the field of environmental science and inquiry.

1.6 SPECIAL TERMS AND CONDITIONS

The Client requested no special terms or conditions regarding this ESA.

1.7 ADDITIONAL SERVICES

No additional services were requested or contractually agreed upon by the Client for this ESA.

1.8 DEVIATIONS

No deletions or deviations from the ASTM Practice E 1527-13 were made in conducting this ESA.

1.9 USER RELIANCE

In accordance with the terms of our agreement with AKRF and MSCAA, Tioga has conducted a Phase I ESA of a 100 acre tract north and east of 3870 Fite Road in Millington, TN. The assessment was prepared under contract for exclusive use by MSCAA. Reliance by any other party is not authorized unless written authorization is granted by MSCAA, AKRF, and Tioga.

2.0 USER PROVIDED INFORMATION

This section discusses those areas for which relevant information was requested of the user. The “user” is defined by the ASTM standard as “*the party seeking to use Practices E 1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager.*” The “user” has specific obligations outlined in Section 6 of ASTM Standard E 1527-13 which are addressed in the following sub sections.

The “user” for purposes of this ESA is the MSCAA and a User Questionnaire was completed by Ms. Lori Morris of MSCAA. A copy of the User Questionnaire can be found in Appendix 5.

User Obligations	Comment
Did a search of land title records identify any Environmental Liens and/or Activity Use Limitations at the Property?	Unknown
Does the User have Specialized Knowledge related to the Property?	Yes (See Section 2.1 below)
Does the purchase price of the Property reasonably reflect fair market value?	Yes
Does the User know the past uses of the Property?	No
Does the User know of specific chemicals that are present?	No
Does the User know of spills or other chemical releases at the Property?	No
Does the User know of any environmental cleanups that have taken place at the Property?	No
Is the User aware of any obvious indicators that point to the presence or likely presence of releases at the Property?	No
Owner, Property Manager, & Occupant Information	Owner and Property Contact: Six individual parcels listed. See the table in Section 2.1 below.
Purpose for Performing ESA	As a component of due diligence associated with the requirements of the NEPA process
Are there any prior environmental reports or site specific environmental documents available for review?	None Available

2.1 SPECIALIZED KNOWLEDGE

Specialized Knowledge of the subject Property was provided as follows: The current property is undeveloped. The Charles Baker Airport was originally built during World War II as an outlying landing field (OLF) to Naval Air Station Memphis and consisted of eight 1,600-foot paved runways arranged in a Star of David pattern. Considered surplus at the end of the war, the OLF was

released to civilian control in 1946. Charles W. Baker Airport opened in 1959. The airport went through significant growth period in the early 2000's when several hangars were constructed as they are today.

2.2 PROPERTY OWNERS

Parcel #	Owner	Address
D0136 00143	Bonnie Dove	5637 Raleigh Millington Road
D0136 00142	Dorothy Dove	5675 Raleigh Millington Road
D0136 00141	Bonnie Dove	5731 Raleigh Millington Road
D0136 00056	Margaret Renshaw and Eva Hussey	5861 Raleigh Millington Road
D0136 00055	Bonnie Dove	6008 Chase Road
M0125 00625	John Gallina	Amherst Road

3.0 SITE RECONNAISSANCE

Site reconnaissance is performed for the purpose of identifying those conditions that are visually or physically observable that may indicate the presence of recognized environmental conditions in connection with the Property and Property uses. When and where applicable, information gathered for adjoining properties as seen from the Property is included.

3.1 GENERAL SITE SETTING

The general site setting of the subject Property and the surrounding area were visually and physically observed from the Property during the site visit and going to or from the Property for the site visit.

The general site setting of the Property and surrounding areas is undeveloped, agricultural, and commercial. Undeveloped and agricultural properties border the subject Property on the east and west sides, while an undeveloped forested property borders the subject Property to the north. Lucy Elementary School adjoins the northeast corner of the subject Property and a railroad adjoins the northwest corner. The subject Property extends a narrow band to the south along the east side of Charles Baker Airport. East adjoining this extension are agricultural fields and a self-storage commercial facility.

The subject Property is vacant and undeveloped. The area consists of forests and agricultural fields. The Property is approximately 258 feet above Mean Sea Level (MSL) and slopes gently down from north to south. Some elevation is present on the northeastern edge of the subject Property that slopes more sharply down from east to west, before flattening in the central portion of the site. With the exception of the east adjoining properties at the northern end of the site, all adjoining properties are of a similar elevation to the subject Property. Multiple surface water bodies were observed on the subject Property through aerial imagery. During the site visit these areas were mostly dry with a few standing pools of water but were confirmed to likely hold water the majority of the time. These channels are shown on the topographic maps as dotted blue line streams flowing from north to south within the subject Property.

The Property is accessible from the east by a gravel drive leading to a municipal sewer pump station in the central portion of the site. The drive is located to the east of the subject Property and connects to Amherst Road.

3.2 CURRENT USES OF THE PROPERTY

The subject Property was visually and/or physically observed during the site visit to ascertain the current use. The Property is currently vacant and undeveloped. With the exception of utility lines across the north central portion of the site to power the pump station, no public utilities are present on the subject Property. There are no water supply wells located on this property.

3.3 CURRENT USES OF ADJOINING PROPERTIES

Current uses of the immediately adjoining properties listed in this report are based on visual observations made from the subject Property and public thoroughfares adjacent to the adjoining properties. These observations are intended to ascertain the current use of

those properties and determine if they are likely to indicate a recognized environmental condition in connection with the operation or activities on the adjoining properties.

The subject Property consists of portions of tax parcels north of the Charles W. Baker Airport. Due to shape of the subject Property, these tax parcels are listed below as adjoining parcels as well. For tax parcels within the subject Property, the listing begins with 'Portion of'. The following list describes these visual observations:

Location (relative to subject property)	Address	Current Use	Potential for Oil and Hazardous Material Usage	Elevation (relative to subject property)
Northwest	No address	Railroad easement	Herbicides and Pesticides	Higher
North	6269 Amherst Road	Lucy Elementary School	None identified	Higher
East	Portion of Parcel M0125 00625	Undeveloped	None identified	Higher
	Portion of Parcel 5861 Raleigh-Millington Road	Agricultural land	None identified	Higher
	Portion of 5731 Raleigh-Millington Road	Agricultural land	None identified	Level
	Portion of 5675 Raleigh-Millington Road	Agricultural land and self-storage commercial business	None identified	Level
	Portion of 5637 Raleigh-Millington Road	Agricultural land and self-storage commercial business	None identified	Level
South	3870 Fite Road	Charles Baker Airport	Fuel USTs, various automotive and aeronautical fluids	Level
West	Portion of Parcel M0125 00625	Undeveloped	None identified	Higher
	Portion of 6008 Chase Road	Agricultural land, undeveloped area, and residential	None identified	Higher

3.4 METHODOLOGY AND LIMITING CONDITIONS

William Gray of Tioga Environmental performed the site visit on November 15, 2021. The day of the site visit the weather consisted of sunny skies and a temperature of approximately 70 degrees Fahrenheit. The visit consisted of a walk of the entire Property to observe structures, operations, and conditions focusing on identifying the presence or indications of hazardous materials, petroleum products, or other conditions that may lead to environmental concerns.

The Property was visually and physically inspected from all normally accessible areas. All adjoining properties were visibly accessible from the subject Property. Photographic documentation of the site visit is presented in Appendix 2.

3.5 EXTERIOR OBSERVATIONS

All exterior areas of the subject Property were visually and/or physically observed to gather information concerning environmental impacts from hazardous substances, petroleum products, and equipment on site that may have the potential to adversely impact the surface or subsurface, groundwater, or surface waters of the Property. Finally, adjoining properties were observed from the Property lines and public thoroughfares to ascertain the potential for environmental impacts from these adjoining properties on the subject Property.

3.5.1 Hazardous Substances

The subject Property is an undeveloped area that consists of forests and agricultural fields. One municipal sewer system pump station is located on the northeastern portion of the site. No other structures were present, and no other uses of the subject Property were apparent. Consistent with these observations, the site reconnaissance indicated no conditions likely to involve the use, treatment, storage, disposal, or generation of hazardous substances on the subject or adjoining properties. There were no unusual odors or stressed or dead vegetation identified on the subject Property or adjoining properties. No visual evidence of improper handling or disposal of hazardous chemicals or materials on the grounds was apparent. Safety data sheets are not required or maintained on the Property.

3.5.2 Storage Tanks

There were no aboveground storage tanks (AST) or evidence of any underground storage tanks (UST) observed on the site at the time of the site visit. Additionally, there was no visual evidence of ASTs or USTs present on adjoining properties.

3.5.3 Indications of PCBs

Three pole-mounted transformers were located on a single pole that serviced the municipal sewer pump station on the northeast portion of the subject Property within Parcel #M0125 00625. These transformers appeared to be recently installed and showed no surficial staining or evidence of leaks.

3.5.4 Indications of Waste Disposal

A small amount of construction debris was noted on the central western portion of the subject Property. This debris appeared to have been deposited many years prior and consisted of unidentifiable textiles, broken concrete, and concrete pipes. No indications of active dumping of construction debris were observed.

There were no other indications of waste disposal on the subject Property or adjoining properties. There were no indicators of solid waste disposal activity such as free liquids, odors, unusual depressions, or discolored or ponded water.

3.5.5 Additional Observations

No evidence of wells, public or private, was observed. No stressed vegetation, pits, cisterns, or sumps were identified on the subject Property or the adjoining properties.

Several channels and areas with apparent wetland hydrology were observed throughout the subject Property, along with evidence of occasional flooding.

3.6 INTERIOR OBSERVATIONS

There are no interior areas located on the subject Property.

4.0 RECORDS REVIEW

A review of records is performed to evaluate information contained in the files that can help identify recognized environmental conditions in connection with the Property. The records review includes regulatory documents and database searches, physical setting sources, and historical documents. The records review is limited to records that are reasonably ascertainable, practically reviewable, and are publicly available within reasonable time and cost constraints. (ASTM Standard E 1527-13, Section 8).

The information derived from this records review is an important component of the investigation process in formulating findings and determining if recognized environmental conditions, as defined by the ASTM Standard, are present on the Property.

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES, FEDERAL AND STATE

An environmental database search report was obtained from Environmental Data Resources, Inc. (EDR) and reviewed by Tioga for the Property as provided for in Section 8.2 of the ASTM Standard. The EDR report contains records of registered sites in the vicinity of the Property for the classifications and distances listed in the tables below. The fourth column identifies how many sites were identified in each category. The final column identifies how many, if any, of the reported sites contain environmental findings which are then described below. Additionally, the Tennessee Department of Environmental Conservation (TDEC) provides several online data viewers for Division of Remediation (DoR), Underground Storage Tank (UST), and Hazardous Waste Management facilities throughout the state that were utilized.

In determining whether a site has the potential to represent a Recognized Environmental Condition (REC), Tioga considers the following: the nature of the listing (listed for having a release or only listed for having a permit), the groundwater flow direction, the distance from the subject Property, and file review documentation including any case closure and no further action letters.

**Environmental Record Search Summary
Charles W. Baker Airport, Land Acquisition & Tree Obstructions Clearing,
Millington, Shelby County, Tennessee
Tioga Project No. 571206.00**

Database	Search Distance (miles)	Subject Property Listed	Total Number of Reported Sites	Environmental Findings (discussed below in further detail)

EDR Historic Drycleaners	0.25	No	0	-

Databases from the EDR report provide relevant information regarding this property. Of the 34 databases available, 4 had environmental findings relevant to the Property. Information on sites identified as findings has been summarized in the following sections. The complete EDR Search Report is included in Appendix 3. Supporting documentation from state records is included in Appendix 6.

4.1.1 Charles Baker Airport (3870 Fite Road)

Charles Baker Airport is listed in the EDR report as an Underground Storage Tank (UST) and Historical UST (HIST UST) site (Facility ID: 9-790382) and is located south adjoining to the subject Property. A file review with the TDEC found records of four USTs at the facility. These tanks are as follows:

Tank ID	Capacity (gallons)	Contents	Date Installed	Date Removed
1	12,000	Gasoline	1960's	1987
2	12,000	Gasoline	1960's	1987
3	12,000	Jet Fuel	1987	In Use
4	12,000	Gasoline	1987	In Use

Files reviewed indicated that the two original tanks were removed from the site under supervision of an inspector that confirmed the tank pit was clean with no odor coming from the backfill removed. Two new 12,000 gallon fiberglass tanks were then installed into the same tank pit. These two USTs are currently in use at the site and the most recent compliance inspection, dated June 18, 2021, found no violations associated with these USTs. While the facility is south adjoining to the subject Property, these tanks were verified to be located approximately 900 feet southwest of the nearest point of the subject Property.

4.1.2 Division of Remediation Sites (Various Addresses)

The EDR report and the DOR data viewer lists six sites within one mile of the subject Property. For EDR listings, these sites are designated as Voluntary Cleanup Program (VCP) or State Remediation Program (SRP) sites. Facilities listed only on the TDEC DOR data viewer do not have program designations. These facilities are as follows:

Facility Name	Facility ID	Database listed	Facility Status	Approximate distance and direction from subject Property	Resolution
Former Raggetts Grocery	SRS791029	EDR VCP and SRP	Closed	0.29 miles north	Two 300 gallon USTs closed in place.
Millington #5	79626	DOR Data viewer	No further action	0.54 miles south	Construction debris dumping – no further investigation.
Gulf and Western Taylor	79574	EDR SRP	Closed	0.80 miles southwest	Site Prioritization Report recommended no further action
McInnes Rolled Rings	SRS790844	DOR Data viewer	Open – in monitoring	0.80 miles southwest	Soil and groundwater monitoring of VOC

Facility Name	Facility ID	Database listed	Facility Status	Approximate distance and direction from subject Property	Resolution
					contamination confirmed to be restricted to the property
SCA Chemical SRVS, Inc.	79509	DOR Data viewer	N/A	0.81 miles southwest	Facility never constructed
Earth Industrial Waste	79506	DOR Data viewer	No further action	0.92 miles southwest	Site Prioritization Report recommended no further action

Files for each of these sites were reviewed and with the exception of McInnes Rolled Rings, all sites are either closed with no further action required or were assessed and found to require no remediation action. Additionally, with the exception of the Former Raggetts Grocery site, all of these facilities are located in a presumed downgradient direction of the subject Property with respect to groundwater.

4.1.3 Unmapped Sites

Background: Unmapped sites are those without sufficient address information to adequately plot the location of the site relative to the property.

Data: No unmapped sites were identified in the radius report. No unmapped sites were observed in the vicinity of the Property during the site reconnaissance.

4.2 PHYSICAL SETTING SOURCES

The primary physical setting source is the U.S.G.S. 7.5 minute topographic quadrangle map. Additional physical setting sources include soil surveys, hydrology, geologic setting, and hydrogeology references. These may be reviewed to the extent they are likely to influence the potential for a hazardous substance or petroleum product to impact the ground, groundwater, and surface water adversely through transport and migration. The following sections provide information about these features as they relate to the area surrounding the Property.

4.2.1 U.S.G.S Topographical Maps

The 2019 U.S.G.S. Millington, TN topographic quadrangle map was reviewed. Based on review of the topographic map, the average elevation of the Property is approximately 258 feet above mean sea level. No unusual or recognized environmental conditions were apparent on the map reviewed. Appendix 1 contains a section of the topographical map identifying the subject Property for reference.

4.2.2 Geology and Hydrogeology

For this assessment an EDR Radius Map Report with GeoCheck was obtained. This report includes additional information related to the physical setting of the facility such as groundwater flow direction, velocity, and soil properties. Other more specific information related to this site can be found in this stand-alone report, which is included in Appendix 3.

The U.S. Geological Survey Water - Resources Investigations Report 85-4295 for the Memphis, Tennessee area, indicates the geology of the general area is of loess at a thickness of 0-65 feet. This material consists of silt, silty clay, and minor sand and tends to retard downward movement of water.

The principal freshwater aquifers in the Memphis area, in descending order, are: (1) the alluvium, (2) the fluvial (terrace) deposits, (3) the Memphis Sand ("500-foot" sand), and (4) the Fort Pillow Sand ("1,400-foot" sand). The alluvium and fluvial deposits make up the shallow water table (unconfined) aquifers, which are usually separated from the underlying artesian aquifers by the Jackson-Upper Claiborne confining bed. Most of the water used for municipal and industrial supplies in the Memphis area is derived from the Memphis Sand.

Based on the Shelby County Water Table Plate, 2005, the depth to shallow groundwater is approximately 20 to 40 feet below ground surface. However, perched zones of groundwater may be evident at varying depths. Direction of shallow groundwater flow may vary locally due to subsurface conditions. Groundwater flow for this Property is likely southwest, towards the Loosahatchie River.

4.2.3 Drainage Patterns / Basins

The Property is undeveloped and the majority of the area is forested. Some agricultural land is present on the eastern side of the subject Property. The subject Property consists of a natural valley with some elevation on the east and west sides of the area that slope quickly down to the relatively level central portion of the site. Generally, the site slopes gently down from north to south and several drainage channels convey water into a concentrated channel approximately 15 feet deep and 30 feet wide flowing south before exiting the subject Property.

According to the Federal Emergency Management Agency Flood Insurance Map 47157C0170F of September 28, 2007, the majority of the subject Property is located in an unshaded Zone X area. Unshaded Zone X is an area determined to be outside the 0.2% annual chance floodplain. A small portion of the southern leg of the subject Property is located within a shaded Zone X and Shaded Zone AE. Shaded Zone X is an area determined to be within the 0.2% annual chance floodplain and Shaded Zone AE is an area determined to be within the 1% annual chance flood. A copy of the applicable portion of the flood map is included in Appendix 6 for reference.

4.3 HISTORICAL SOURCES

The review of historical documents is completed to compile a history of the Property and area properties listing past uses that may have led to recognized environmental

conditions. Historical search by way of standard historical sources was limited to the previous 84 years. A 50-year chain of title was not provided for review. Historical information was obtained in the form of aerial photographs (1937, 1953, 1957, 1969, 1971, 1973, 1981, 1986, 1992, 1997, 2008, 2012, and 2016), a review of city directories (1967, 1970, 1975, 1980, 1983, 1988, 1992, 1995, 2000, 2005, 2010, 2014, and 2017), and an interview with Lori Morris, the Manager of Environmental Service for the Memphis and Shelby County Airport Authority. Historical aerial photographs are included in Appendix 4.

4.3.1 Subject Property (*Portions of several tax parcels*)

Aerial Photographs	YEAR	DESCRIPTION
	1937 1953	The area appears to be in use as agricultural land and undeveloped forest. One large channel is apparent meandering through the site from north to south.
	1957 1969 1971 1973	Two small ponds are dug in the central portion of the site. One pond is located on the northwest quadrant and another along the western property boundary.
	1981 1986 1992	The sanitary sewer lift station is constructed on the northeastern portion of the site.
	1997 2008 2012 2016	The northern portion of the site appears to no longer be in active agricultural use. Throughout this period of the aerial record the subject Property is allowed to naturally reforest, with the exception of the agricultural portion of the site along the eastern project area.
City Directory	1967 1970 1975 1980 1983 1988 1992 1995 2000 2005 2010 2014 2017	This site consists of several tax parcels, mostly without addresses. Where applicable, city directory listings will be presented in the adjoining property sections below. There were no listings of environmental significance.
Visual Observations	Current visual observations of the Subject Property are consistent with the documented uses identified in the aerial photograph searches back to the late 1990's.	
Interviews	The interviews are discussed in Section 5.0.	

4.3.2 Adjoining Properties

Northwest Adjoining Property (No address)

Aerial Photographs	YEAR	DESCRIPTION
	1937 1953 1957 1969 1971 1973 1981 1986 1992 1997 2008 2012 2016	A railroad is present throughout the historical aerial record.
City Directory	1967 1970 1975 1980 1983 1988 1992 1995 2000 2005 2010 2014 2017	There is no address listed for this land.

North Adjoining Property (6269 Amherst Road)

Aerial Photographs	YEAR	DESCRIPTION
	1937	A single structure is present in the northeast corner of the site and the majority of the land appears to be in agricultural use.
	1953 1957	The single structure is expanded to the east and the majority of the area is still in agricultural use.
	1969 1971 1973 1981 1986 1992 1997	Two new structures are added to the north and south of the existing building. No other changes to the area occur.
	2008 2012	The final addition is made to the southwest of the existing structures and the facility appears to be in its

	2016	current configuration with associated parking areas. The remainder of the property is no longer active agricultural land and is allowed to naturally re-establish vegetation through this time period.
City Directory	1967 1970 1975 1980 1983 1988	This address is not listed.
	1992 1995 2000 2005 2010 2014 2017	Lucy Elementary School

East Adjoining Properties (Portions of Parcel Number M0125 00625 and 5861, 5731, 5675, & 5637 Raleigh-Millington Road)

Aerial Photographs	YEAR	DESCRIPTION
	1937 1953 1957	<p><u>M0125 00625</u> The area appears to be in use as agricultural land.</p> <p><u>5861 Raleigh-Millington Road</u> A single structure is present on the east side of the property that appears to be residential. The majority of the area appears to be in use as agricultural land.</p> <p><u>5731 Raleigh-Millington Road</u> A single structure is present on the east side of the property that appears to be residential. 5.0 INTERVIEWS

Contact	Title	Employer	Date	Phone/Email
Lori Morris	Manager of Environmental Service	Memphis and Shelby County Airport Authority	12/2/2021	(901) 922-8754

Lori Morris is the Manager of Environmental Service for the MSCAA and was contacted for information regarding the subject Property. Ms. Morris advised that to her knowledge the subject Property was mostly undeveloped land with some areas of wetlands, streams, and agricultural uses. Ms. Morris also stated there were some easements on the Property for utility line crossings and a sanitary sewer lift station. Ms. Morris was not aware of any hazardous materials or petroleum products used, stored, or released on the subject Property.

Contact	Title	Employer	Date	Phone/Email
Dian Shirley	Clerical Support IV, Transformer and Electric Motors	MLG&W	12/2/2021	DShirley@mlgw.org

MLG&W was contacted to obtain information relative to the presence of three pole-mounted transformers on the site. Ms. Dian Shirley indicated that the three pole-mounted transformers on this site had not been tested for PCB containing oils. Her response acknowledged that MLG&W is responsible for repair and clean up if transformer units fail and/or leak.

Contact	Title	Employer	Date	Phone/Email
John Gallina	Owner	N/A	12/2/2021	(901) 870-7701

John Gallina is the owner of the unaddressed northern parcel (Parcel #M0125 00625) that includes a portion of the subject Property. Mr. Gallina stated that he purchased the parcel approximately 20 years ago with the intent to develop the area. He stated that no development has occurred and the property has not been used during his ownership. Mr. Gallina stated that no hazardous materials or petroleum products have been used, stored, or released on the property to his knowledge.

6.0 EVALUATION

This Phase I Environmental Site Assessment has identified known or suspect environmental conditions associated with the Property. Information collected during the course of this investigation has been evaluated and Tioga's professional opinion is given for the following identified conditions as being either **recognized environmental conditions**, **controlled recognized environmental conditions**, **historical recognized environmental conditions**, material threats, **de minimis** conditions, or business environmental risk issues.

6.1 FINDINGS/OPINIONS

Finding 1: The historical use of the subject Property as agricultural land.

Professional Opinion: Based on aerial records, the northern and eastern portions of the subject Property were used as agricultural land beginning with the earliest aerial photographs in 1937. Continual use of pesticides and herbicides can cause soil contamination if overapplied. No indications of use of agricultural products outside manufacturer recommendations were observed during the site visit and no evidence of overapplication (i.e. stressed or dead vegetation, discarded chemical containers, etc.) were observed. This use of the subject Property **does not represent a recognized environmental condition**.

Finding 2: The presence of a UST and Hist UST site south adjoining the subject Property.

Professional Opinion: Charles Baker Airport (3870 Fite Road) is listed as a UST and HIST UST site (Facility ID: 9-790382) and is located south adjoining to the subject Property. Records of four USTs at the site were reviewed. Two 12,000 gallon gasoline tanks were installed in the 1960's and removed in 1987. During the removal, two 12,000 gallon USTs were installed into the same tank hold that the previous tanks were removed from. These tanks contain jet fuel and gasoline respectively and are currently in use at the site. The most recent compliance inspection found no violations in connection with the operation of these USTs. While the facility is south adjoining to the subject Property, these tanks were verified to be located approximately 900 feet southwest of the nearest point of the subject Property.

Based on the real distance of the USTs from the subject Property, the groundwater direction, and the fact that no spills or releases have been indicated, this site **does not represent a recognized environmental condition** at the subject Property.

Finding 3: The presence of six Division of Remediation sites within 1 mile of the subject Property.

Professional Opinion: The EDR report and DOR data viewer lists six sites within one mile of the subject Property. These facilities are as follows:

Facility Name	Facility ID	Database listed	Facility Status	Approximate distance and direction from subject Property	Resolution
Former Raggetts Grocery	SRS791029	EDR VCP and SRP	Closed	0.29 miles north	Two 300 gallon USTs closed in place.
Millington #5	79626	DOR Data viewer	No further action	0.54 miles south	Construction debris dumping – no further investigation.
Gulf and Western Taylor	79574	EDR SRP	Closed	0.80 miles southwest	Site Prioritization Report recommended no further action
McInnes Rolled Rings	SRS790844	DOR Data viewer	Open – in monitoring	0.80 miles southwest	Soil and groundwater monitoring of VOC contamination confirmed to be restricted to the property
SCA Chemical SRVS, Inc.	79509	DOR Data viewer	N/A	0.81 miles southwest	Facility never constructed
Earth Industrial Waste	79506	DOR Data viewer	No further action	0.92 miles southwest	Site Prioritization Report recommended no further action

With the exception of McInnes Rolled Rings, all sites are either closed with no further action required or were assessed and found to require no remediation action. Additionally, with the exception of the Former Raggetts Grocery site, all of these facilities are located in a downgradient direction of the subject Property with respect to groundwater. Based on the closed nature of these sites and/or the distance from the subject Property and the groundwater direction, these sites **do not represent a recognized environmental condition** at the subject Property.

6.2 CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 for the Charles W. Baker Airport Land Acquisition & Tree Obstructions Clearing project that consists of an approximately 100 acre tract located north and east of the Charles W. Baker Airport at 3870 Fite Road, Millington, Shelby County, Tennessee, the Property.

As defined in the Standard, this assessment has identified three findings and revealed no evidence of **recognized environmental conditions** in connection with the Property.

6.3 ADDITIONAL INVESTIGATIONS

No additional investigations were performed as a component of this Phase I Environmental Site Assessment.

6.4 DATA GAPS

Per ASTM E1527-13 Section 12.7, “the *report* shall identify and comment on significant *data gaps* that affect the ability of the EP to identify *recognized environmental conditions* and identify the sources of information that were consulted to address the *data gaps*. A *data gap* by itself is not inherently significant.”

Identified data gap(s) are as follows:

- According to the definition in ASTM E1527-13 Section 8.3.2.3, a data failure occurs when historical records are not available at five-year intervals back to first use or 1940 (whichever is earlier). The Property has not been developed and first use as agricultural land is shown in the earliest aerial photographs in 1937. No records prior to 1937 were available and a greater than five-year interval was present between 1937 to 1953 and 1957 to 1967.
- Only one property owner responded to requests for information about the history of the subject Property. Based on the historical records, the subject Property appears to have been undeveloped or in agricultural use throughout its history, with no record of uses that would cause significant environmental concern.

Based on the available information, any data gaps identified are not considered to have significant potential to affect the ability of the environmental professional to render an opinion of the target property because the history and use of the property were adequately determined from available data.

6.5 DELETIONS

No deletions were made to this report.

6.6 ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

7.0 NON-SCOPE SERVICES

7.1 RECOMMENDATIONS

We do not recommend any additional investigations at this time.

7.2 ADDITIONAL SERVICES

No additional services were requested or provided.

7.2.1 Environmental Lien Review

An environmental lien review was not completed or otherwise provided as a component of this environmental site assessment.

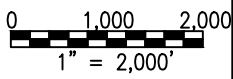

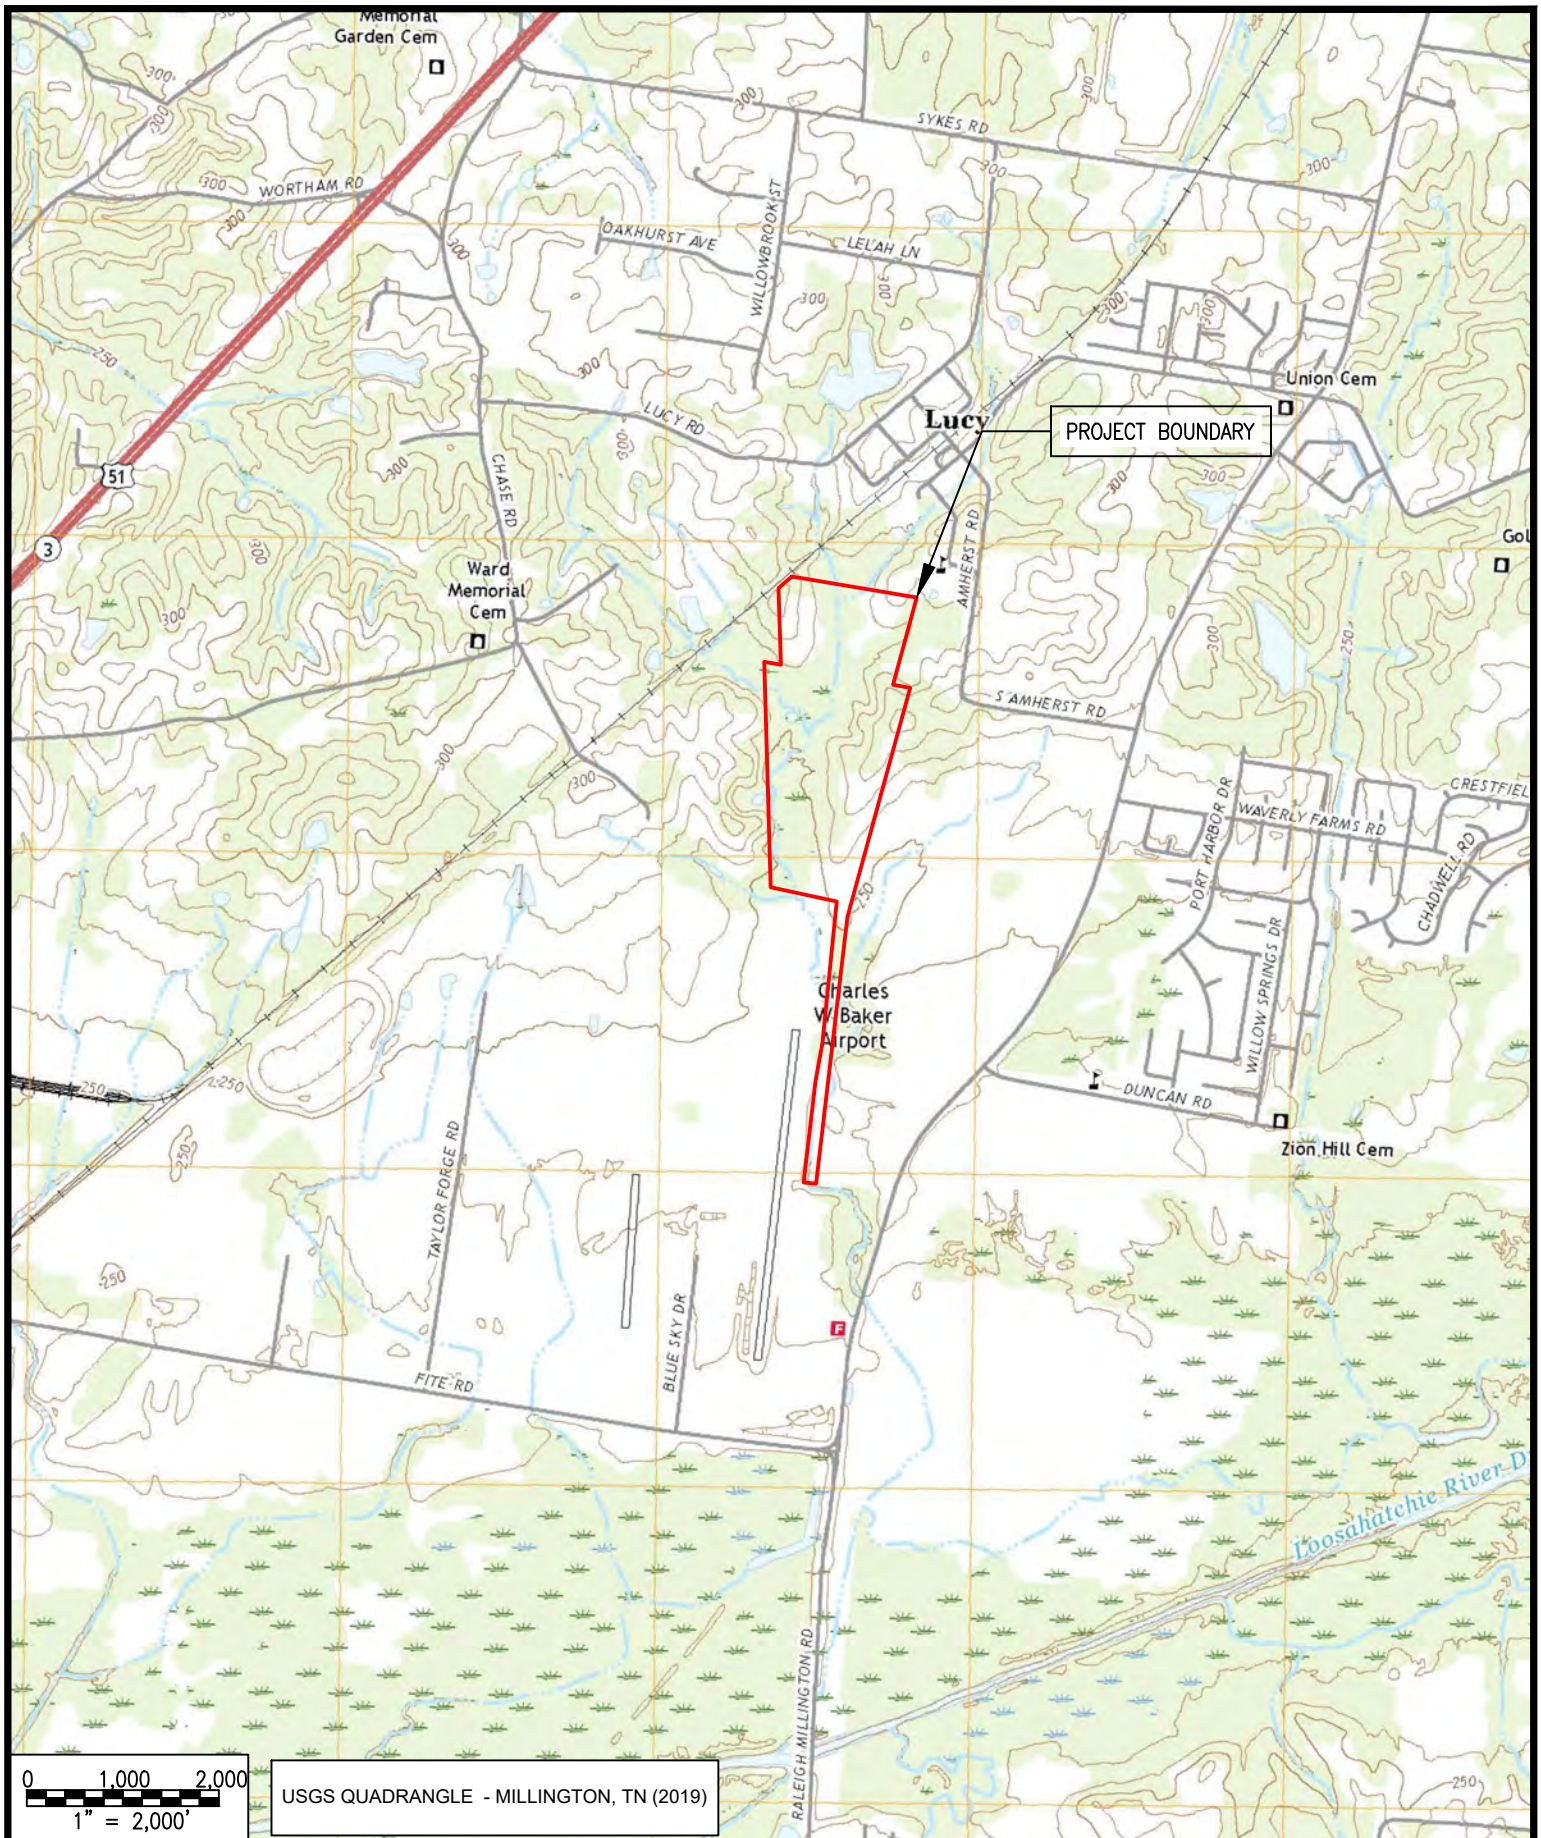

7.2.2 Vapor Encroachment Screen

A Vapor Encroachment Condition (VEC) at the subject Property can be ruled out because no potential vapor sources are identified for the subject Property.

EXECUTIVE SUMMARY

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). TIOGA ENVIRONMENTAL CONSULTANTS, INC. used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by TIOGA ENVIRONMENTAL CONSULTANTS, INC.. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

An online review and analysis by TIOGA ENVIRONMENTAL CONSULTANTS, INC. of the CORRACTS list, as provided by EDR, has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

EPA ID:: TND000614321:

Lists of state and tribal registered storage tanks

TN UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environment & Conservation's Facility and Tank Report.

An online review and analysis by TIOGA ENVIRONMENTAL CONSULTANTS, INC. of the TN UST list, as provided by EDR, has revealed that there is 1 TN UST site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

B3	10

Lists of state and tribal voluntary cleanup sites

TN SRP: The State Remediation Program (SRP) was established in 1994 within the Division of Solid Waste Management for the purpose of providing owners, prospective purchasers and other interested parties the means to voluntarily investigate, clean up or monitor contaminated sites not regulated under RCRA, CERCLA or the Tennessee Division of Underground Tanks (UST).

An online review and analysis by TIOGA ENVIRONMENTAL CONSULTANTS, INC. of the TN SRP list, as provided by EDR, has revealed that there is 1 TN SRP site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FORMER RAGGETTS GROC State Remediation Program Site Number: : Active?: CLOSED: Site Control Number::	6395 DOWER ROAD	N 1/4 - 1/2 (0.294 mi.)	5	16

TN VCP: The Voluntary Cleanup Oversight and Assistance Program (VOAP) offers people the opportunity to work proactively with state government to address necessary cleanup of a property to return it to productive use. In return for their efforts, participants can receive a No Further Action letter and a release of liability for areas where investigation and cleanup is conducted. The program is open to everyone with an interest in addressing contamination at a site.

An online review and analysis by TIOGA ENVIRONMENTAL CONSULTANTS, INC. of the TN VCP list, as provided by EDR, has revealed that there is 1 TN VCP site within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Tennessee Underground Storage Tank (UST) is a system for managing information on underground storage tanks and any underground piping connected to the tanks that have at least 10 percent of its combined volume underground.
